While gathering and sharing information on attacks is the foundation of a defense against information warfare, so far we do it badly. The private sector is reluctant to share information for both competitive and legal reasons. Information sharing comes no more easily to government. Intelligence agencies classify information in order to limit sharing to those with a "need to know." Law enforcement agencies restrict sharing to protect witnesses and keep their targets in the dark. And almost everyone in government treats information as currency, to be offered only sparingly and in return for value.

In short, sharing information does not come naturally. Despite this reluctance, the need to centralize and share information about network attacks is so obvious that an interagency entity, the National Infrastructure Protection Center (NIPC), was created to do just that.

Specifically, NIPC has two primary practical goals. One is to investigate (and, wherever possible, prevent) attacks on critical infrastructure systems. Critical infrastructure systems are the backbones that allow U.S. cities and towns to function; they include the electrical power grid, the water works, and the telecommunications pipelines. Half of NIPC's mission is to coordinate the collection and dissemination of information about the security and defense of these systems. The other part of NIPC's mission is to coordinate the sharing of information on network attacks within the law enforcement and intelligence communities, which includes, of course, DoD.

When NIPC was established, there was some debate about where it should be housed. Agencies like the Commerce Department were rejected because they lacked independent

Page 1146 of 3957

investigative and intelligence capabilities. Intelligence agencies were rejected because their mission is focused on foreign countries, and their capacity to gather intelligence on Americans is rigorously limited. While information warfare itself is an entirely appropriate concern of the intelligence community, most network attacks are not state-sponsored. Indeed, the thousands of hackers whose activities obscure the acts of foreign governments are as likely as not to be Americans. By the same token, while DoD is the proper agency to respond to information warfare, it has little or no authority to deal with simple vandals.

Given those constraints, it seemed that the logical "intake point" for information about infrastructure attacks was the FBI, which has authority to investigate both common criminals and foreign agents. Despite this logic, the FBI was a controversial choice. It was handicapped by a remarkably deep and pervasive reputation – among other law enforcement agencies, in the intelligence community, and in the private sector – as a black hole for information. Everything goes into the Hoover building, according to this view, and nothing comes out.

For that reason, many steps were taken to keep NIPC from falling heir to the FBI's reputation for restricting information. A well-regarded Justice official was transferred to head the office, and detailees from the Defense Department and intelligence agencies were put in charge of information-sharing offices within NIPC. Based on what the task force learned in the course of interviewing numerous DoD, Justice, NIPC, and intelligence sources, however, this was not enough. Putting information-sharing responsibilities in the hands of law enforcement agencies has produced serious problems that were not adequately foreseen when NIPC was established.

Because of legal and cultural restrictions, NIPC staff, even personnel detailed from DoD itself, have found it difficult to share information about network attacks in an easy, cooperative fashion with agencies outside law enforcement. The problems have been many. The National Security Council, for example, has been denied timely information on the status of network attacks under investigation; whole categories of information (Title III intercepts, for example, and materials obtained via grand jury subpoena) have been set aside by the Justice Department as the domain only of law enforcement agencies. Other information has been designated as "law enforcement sensitive" and subjected to dissemination restrictions in a fashion that lacks the safeguards usually relied upon to prevent overclassification.

Of course there are explanations for all of these roadblocks, and in many cases NIPC has worked to overcome them and to establish at least the beginnings of an effective information-sharing facility. The task force does not underestimate that achievement. NIPC has faced pressures from many directions other than defense and the intelligence communities. Businesses, civil liberties advocates, competing law enforcement agencies, and even foreign governments have all claimed the right to help set one or another aspect of NIPC policy, though they have been notably more reticent when resources have to be put into the effort. In these circumstances, to create a functioning entity with its own esprit has proved to be no easy task.

That said, the task force finds it unlikely that NIPC, operating under current constraints, can consistently provide the kinds of information needed by DoD to protect against attacks with a national security dimension. NIPC is still far too dominated by the law-enforcement culture and by legal interpretations by the FBI and Justice Department that tend to reinforce the NIPC's reputation for not sharing information. While NIPC has managed to work around some of these obstacles, the current structure for sharing network attack information still is not responsive enough to the interests of national security and intelligence agencies.

Page 1147 of 3957

This situation is not tolerable, particularly for the Department of Defense. To a very great extent, DoD depends on NIPC for the information it needs to defend itself and the nation. Reliance on law enforcement agencies for such a crucial element of support will only work if those agencies seamlessly share with DoD any and all information likely to have a bearing on DoD's defense mission. Current policies suggest that the FBI and Justice Department are not willing (or perhaps think themselves unable) to share information in this seamless way. The restraints on NIPC have significantly restricted its ability to play an adequate interagency information-sharing role.

The task force provided early drafts of conclusions to NIPC, and NIPC strongly, sometimes stridently, disagreed with task force conclusions on this point. NIPC says that it has managed to find ways to share virtually every useful piece of information about network attacks that has come into its hands. While the doctrines and difficulties laid out in this report are acknowledged as obstacles, NIPC believes that in the end they can all be overcome – indeed that almost all have been overcome – with creativity and care. NIPC urges us to focus on its successes and its need for substantial additional resources from DoD to conduct the necessary analyses of data already being shared.

The task force agrees that there have been successes, and that more analytic resources are needed – at NIPC or elsewhere. But that does not alter the fact that substantial legal and policy roadblocks exist, and that those roadblocks have prevented sharing already. Change will not come quickly. While in some cases NIPC has worked around the problem successfully, we must not wait until there is a catastrophic failure to address these concerns. The legal and policy issues identified here are continuing threats to the effort to build a seamless and effective information-sharing system for network attacks.

The task force recommendations go to the heart of this concern.

Page 1148 of 3957

Page 1149 of 3957

II. RECOMMENDATIONS

RECOMMENDATION 1:

DoD Should Insist on a High-Level Agreement with Justice and the FBI that Reforms NIPC's Role and Structure.

Part of the information sharing problem has been a lack of clear leadership. After the initial cabinet-level activity to establish NIPC, little high-level attention was paid to how preparations for information assurance were actually functioning. In that atmosphere, each agency asserted its prerogatives without much fear of oversight. Issues related to information sharing practices were not readily resolved because political decision makers did not intervene to force reasonable compromises in the interest of NIPC's overall mission.

The task force's central recommendation, therefore, is that this problem be addressed at the highest levels of the Justice and Defense Departments, and that DoD insist on major changes in exchange for augmenting its support for NIPC.

Currently, DoD is the largest contributor to the staffing of NIPC, other than the FBI itself. Present staffing levels at NIPC are roughly as follows:

FBI:	82
DoD[1]:	14
United States Postal Service:	1
CIA:	2
Energy Department Labs:	1
Local Law Enforcement:	1
Foreign Liaisons:	2

There is no high-level agreement between DoD and Justice/FBI about the terms of details to or the information-sharing practices of NIPC. Instead, information-sharing policy is set by a two-page memorandum of understanding (MOU) that is to be signed by DoD, FBI, and each detailed employee. The MOU is an inadequate and entirely one-sided document, essentially imposed on the detailees and their agencies. Some provisions are unexceptionable – such as those making clear that each employee sent from DoD will be tasked exclusively by his or her superiors at NIPC, will be removed from the chain of command in DoD, and will have access to information in FBI files and to other sensitive information.

Unfortunately, the MOU goes further. It requires that dissemination of information from NIPC, including dissemination back to the detailee's home agency, be governed by FBI policy as well as applicable statutes and other guidelines or procedures.[2]

---

1 The DoD elements represented include NSA, NCIS, Air Force OSI, DCIS, air force, army, navy, and OSD.

2 NIPC argues that the MOU is necessary to protect against claims that DoD personnel are acting in violation of *posse comitatus* rules and that NSA and CIA personnel are violating rules governing intelligence agency handling of U.S. person information. This is open to question, and should be more carefully reviewed. In practice, *posse comitatus* is rarely a bar to assistance to law enforcement, and while intelligence agency restrictions may require intelligence personnel on detail to obey the laws governing law enforcement, it is not clear that these personnel must submit to additional and unspecified

Page 1150 of 3957

Those policies are by no means limited to information-sharing restrictions imposed by law. It is of course understandable that anyone handling law enforcement information would be subject to any restrictions imposed by law on the use of such information. But the MOU goes beyond that to impose sweeping restrictions that are not required by law. Such a sweeping approach is inconsistent with NIPC's mission and with the participation of other agencies in that mission. Some restrictions based on law enforcement policy rather than law may well be appropriate, but the burden of identifying and justifying each separate restriction should be on the FBI and Justice. (It is not enough in an interagency context, to say, as NIPC has, that equivalent restrictions are imposed on FBI personnel. The point of an interagency task force is that the personnel bring different skills and traditions to the task.)

Agencies that detail staff to NIPC still pay the salaries of their detailees. It makes no sense to pay those salaries unless the employees' participation in NIPC provides ongoing value to the agency that details them. Potential restrictions on detailees' communications limit their value to the sending agency. Some agencies are already cutting back their participation. The Secret Service, for example, has ended its participation. After initially insisting on sending seven people, it has pulled all of its representatives back, in part because of reluctance to accept FBI information-restriction policies. The Department of Energy has also failed so far to replace one of its detailees; it too has had conflicts with the FBI and NIPC over information sharing.

Although DoD originally planned to send eighteen detailees, only fifteen have ever been assigned to NIPC, and the likelihood of replacement once they rotate to a new assignment is uncertain. Some DoD elements, notably the National Security Agency, have also had conflicts with NIPC over information-sharing policy; NSA's participation in the NIPC, as well as that of the CIA, has been sporadic. With this track record as a backdrop, it is at least fair for the NIPC to make the claim that pulling back detailees by agencies, as well as sporadic participation, will indeed hamper the NIPC's efforts at information sharing.

Currently, the participation of other agencies, including DoD, is dwarfed by the contribution of the FBI itself to the office's staffing and funding. This will soon turn NIPC into an FBI office rather than an interagency office, and that will have a serious impact on all aspects of the operation. (NIPC's preferred solution would be to increase staffing from other agencies. The task force agrees, but this will happen only if information-sharing problems can be solved.)

DoD should not follow the example of the Secret Service and simply decamp – at least not without attempting to negotiate a broader and more reasonable framework agreement with Justice and the FBI. The task force does not believe that NIPC's problems are necessarily fatal, or that a "go it alone" approach is a better solution for DoD. NIPC continues to be the best window into law enforcement information about network attacks. While its reputation in the private sector is decidedly mixed, it does obtain important information from cooperating companies as well. And so many network attacks are ultimately of little practical interest to DoD that it should allow other agencies to take the lead in addressing them. Withdrawing from NIPC would run a risk of weakening both NIPC and DoD. If possible, it would be far better to

---

NIPC and FBI policies on handling law enforcement information. Moreover, the FBI required other law enforcement agencies – such as the United States Secret Service – to abide by the same agreement, even though *posse comitatus* was not an issue. Indeed, the Secret Service balked at signing the MOU, because it was unduly restrictive, believing as we do that there was no sense in agencies detailing personnel if the detailed employee could not share information more freely with his or her agency of origin.

reform NIPC to make it truly interagency in spirit rather than a captive of law enforcement policies.

While information-restricting law enforcement doctrines need to be addressed in any framework agreement, they are not the only issues that should be covered in high-level talks between DoD and Justice. DoD's own practices in sharing information and choosing detailees are appropriate matters for concern on the part of NIPC. So too is the current placement of NIPC within the FBI hierarchy, which hinders the functioning of NIPC as a truly interagency body.[3] Finally, there is no written agreement on NIPC's role in such obvious questions as whether it is better to lock a particularly dangerous intruder out of a system or to let him in and watch him in the hopes of learning what damage he is capable of causing.

Drafting an agreement that covers all of these aspects of NIPC's operations may be the only way to engage the attention of decision makers within DoD and Justice/FBI, and to ensure that NIPC's critical early-warning mission will be given higher priority than each agency's turf concerns.

The remainder of this section recommends specific reforms that the task force believes should be incorporated into a framework agreement between DoD and Justice/FBI.

RECOMMENDATION 1.1:

All information held by NIPC about infrastructure attacks should be available to DoD unless sharing the information would violate a legal prohibition. DoD should provide similar assurances for information in the hands of its agencies.

Neither NIPC nor DoD has been a model of information sharing. Complaints about unnecessary barriers to information sharing can be heard in both camps, and with good reason: in each agency, there are cultural limits to information sharing. Nonetheless, the task force judges the problem to require more attention on the NIPC side, primarily because that is where the information about network attacks is being centralized.

It is easy to understand the sensitivity of some law enforcement information. The name of a suspect, the identity of a source inside a criminal organization, the effectiveness of a particular investigative technique – this kind of information is jealously protected by law enforcement agencies. Indeed, NIPC fears that if FBI agents were told that NIPC intended to distribute such information throughout the government, they would stop talking freely to NIPC, leading to a new wall between the FBI and other agencies – but this time with NIPC on the other side of the wall.

NIPC has tried to satisfy law enforcement concerns while at the same time finding ways to share information with others. In general, it uses two methods. First, it sanitizes its reports to remove the most sensitive law enforcement sources and methods while still providing useful information. Second, it supplies information marked "law enforcement sensitive," a designation

---

[3] Concern has been expressed at DoD that, in the latest reorganization, NIPC has found itself "buried" in the terrorism division of the FBI. Treating NIPC like any other FBI program heightens the impression that it is simply an FBI office that happens to benefit from free labor provided by other agencies. It is also difficult to run an interagency process that, when complete, must climb the FBI and Justice bureaucracies through several levels. This issue is not without its difficulties. Viewed as a "line" office, NIPC is not big enough to be an FBI division by itself, and so giving it a direct report to the Office of the Director would require treating it more like the FBI staff offices, such as Office of General Counsel.

Page 1152 of 3957

that is similar to the designation "Originator Controlled (ORCON)" in the classified world, telling readers that the information may not be further circulated without the approval of the originating agency. According to NIPC, including the CIA detailee in charge of information sharing, these methods have allowed NIPC to share practically everything of value to other agencies.

NIPC sees the use of the "law enforcement sensitive" concept as a valuable tool that favors sharing. The task force is more troubled by it, particularly because the doctrine is both vague and broad. As set forth in a more detailed NIPC protocol on information sharing procedures, dissemination may be limited to shield "a protected source, sensitive method, [or] confidential witness," categories where restrictions might be justified if interpreted narrowly. But the protocol also protects even broader and more questionable categories of information, such as information identifying juvenile suspects, or information about cases that are awaiting trial. Even information in cases that have been closed can be restricted if the investigating agency thinks disclosure would compromise its sources and methods.

Understandable as the concerns of law enforcement may be, they do not justify such a broad set of restrictions – especially if the interpretation is left solely to law enforcement. Such a decision-making process lacks checks and balances. It does not utilize the more recognized (and in the view of the task force, more disciplined) classified information system familiar to national security agencies. And it makes law enforcement agencies the final authority in disputes about information sharing. The task force welcomes NIPC's assurance that the doctrine is rarely used to prevent sharing of relevant information. If so, it should be possible to adopt a default rule that calls for sharing in the absence of specific factors – and that allows DoD to participate in the decision about whether sharing is justified.[4]

In the task force's view, sharing of information about serious attacks should be automatic unless the sharing would violate a specific legal ban (such as Rule 6(e) of the Federal Rules of Criminal Procedure, which prohibits the sharing of grand jury information) or unless there is an interagency determination that the risk of compromising sources and methods requires the restriction. The task force discusses in later recommendations ways to minimize the adverse effects of legal restrictions on sharing. The recommendation that the risk of compromise be weighed against the value of the information bears further discussion here.

It is worth remembering that the principal justification for the "law enforcement sensitive" doctrine is preventing the compromise of a current or future criminal investigation. And it is obvious that this is a severe risk in some criminal contexts: investigations of organized crime, for example, are susceptible to compromise with consequences that can be fatal for the investigators. But the likelihood that sharing NIPC information with DoD will have such effects is vanishingly small, particularly because NIPC will have information mainly, if not exclusively, about criminal investigations of hackers, who are not known for bribing officials to gather intelligence or for adopting the other techniques of organized crime. More importantly, there is no reason to think that sharing NIPC information with DoD officials is more risky than sharing the information with criminal investigators or prosecutors. DoD is entrusted with far more serious secrets than a

[4] NIPC has pointed out that DoD and other agencies do, in fact, have detailees at NIPC, and some of these detailees are already in a position to approve dissemination of information that is law enforcement sensitive. This is a good thing, but it is not the same as giving DoD an institutionalized voice in the decision.

Page 1153 of 3957

handful of investigative details in a hacking case, and its record of protecting secrets is at least as good as the FBI's and the Justice Department's.[5]

In fact, NIPC does not defend its restrictions on strictly law-enforcement grounds. It argues that the risk of compromise extends not only to individual criminal investigations, but also to general investigatory techniques, many of which are likely to be important to DoD as well as law enforcement. In these circumstances, the issue more closely resembles a classic intelligence "sources and methods" problem, and the usual tactics employed by the intelligence community to solve such problems should work.

It is for this reason that the decision as to whether to share information about an investigation should not be made exclusively by prosecutors and investigators. DoD must be given a voice in that decision, perhaps by designating an official from the Office of General Counsel who would always be trusted with investigative information as part of the interagency sharing process. (The task force notes that twenty-five years ago, intelligence agencies objected to the involvement of the Justice Department in their activities because they feared that prosecutors would be unable to protect intelligence sources and methods; those concerns have now been resolved by long practice. That prosecutors and investigators fear for the security of their special secrets is equally understandable -- and equally wrong.) Involvement of decision makers with different perspectives is an important guarantee of objectivity, but in the end the important thing is not just the process itself, but the principle that those who want to restrict information sharing must justify that view to other parts of the government. The default should be that the information is available to DoD and its agencies.

A second reason often advanced for not sharing investigative information is privacy. This report will address statutory privacy protections separately, but even where statutory restrictions do not apply, the task force agrees that protecting privacy is an important value that NIPC and other agencies need to bear in mind at all times. At the same time, it is worth remembering that NIPC can only share information about private citizens that it already possesses – in other words, information that is already in the hands of at least one and probably several government agencies. It is reasonable to question how well privacy is protected by keeping information that has already been widely shared within the law enforcement community out of the hands of Defense Department analysts. A more effective protection would focus on preventing misuse by all the parties that have access to the information.

As stated at the outset, in focusing on the barriers to information sharing that have been erected at NIPC, the task force does not mean to suggest that this practice runs only one way. NIPC has cited its own examples of information withheld arbitrarily by NSA and perhaps other DoD elements. NSA and NIPC are seen as competing for similar missions and resources, and as is typical in such cases, each side has a store of grievances against the other. The task force recommends that DoD and its elements also make binding assurances that information will be shared with NIPC unless it is subject to legal restrictions. Both parties should ensure that NIPC personnel have clearances that are adequate to facilitate this information sharing and that there is a process for resolving disputes about which classified information may be shared with NIPC.

---

[5] In rebuttal, NIPC and Justice point to an occasion on which a high-ranking DoD official briefed an ongoing attack and investigation to Congress only to have details leak to the press. This of course is unfortunate, and it has happened too often to every agency that depends both on secrecy and on Congressional favor. But every agency tends to remember the times when other agencies have been the source of a leak and to forget those in which it was the source. Keeping information away from DoD is not an appropriate solution to the problem of "political" leaks.

Page 1154 of 3957

RECOMMENDATION 1.2:

NIPC should share all information about network attacks with the National Security Council and its staff unless the information is likely to compromise an investigation of a White House official.

If NIPC is to participate in national security planning and decision making, it must obey the same rules as other participants in that process. This includes providing all necessary information to the interagency process administered by the National Security Council (NSC). Currently, NIPC is unable to do so – a serious handicap that should be cured either by agreement between DoD and the Department of Justice or by the President.

Restrictions on FBI communications with the White House were imposed in 1994 in an agreement between the White House Counsel's Office and the Office of the Attorney General. Under that agreement, the FBI may not provide any information to a member of the White House staff except with the approval of the Deputy Attorney General (DAG). The purpose of this restriction is to prevent actual or apparent White House interference with or influence over criminal investigations. The arrangement gives the Deputy Attorney General an assurance that he is fully aware of any communications between the FBI and the White House.

In the context of NIPC, this restriction on sharing information is dysfunctional. During the Clinton Administration, defense against foreign-based infrastructure attacks was coordinated by a senior NSC official. Delaying the delivery of information to the NSC is not good management, and NIPC itself has asked Justice to modify the rule in this context, so far without effect. The NSC is a well-established mechanism for coordination of national security issues with interagency dimensions. In their defense, the Justice Department and NIPC emphasize that in the end practically everything the NSC wanted to know was provided by NIPC. The task force found that, on some occasions, the transfer of information to NSC has gone smoothly – as one official told us, "DAG approval can take 20 minutes." But in other cases, there have been significant delays in delivering information to the National Security Council due to disagreements between Justice and NIPC over what information should be supplied to the national security staff. Justice officials said they sometimes felt forced to choose between having their best technicians respond to attacks and having the technicians respond to what they called "drive-by tasking" from the NSC.

The task force did not try to decide whether NSC had asked for unnecessary or burdensome briefings, although it was noted that this is a widely held view at NIPC and the Justice Department. But even if that view is correct, Justice should not have responded by claiming the legal right to withhold information from NSC. DoD depends on the NSC to address interagency issues that arise when national security is threatened. The NSC process is well-oiled and has functioned predictably in a host of conflicts, and NSC is the logical place to address network attacks with national security implications. If agencies can refuse to provide information to that interagency process, they will always be tempted to withhold information that makes them look bad. Again, the default should be in favor of sharing information. In the long run, busy NSC officials are unlikely to ask for information that is not relevant to their jobs.

What of the concern that led to the no-White-House-briefings rule in the first place? The task force does not denigrate the concern that White House communications can lead to charges

Page 1155 of 3957

of interference in a criminal investigation. For that reason, the task force agrees that NIPC should be free to refuse to provide information that would compromise an investigation of White House staff. But there is little reason to use a broader rule in this context. Criminal investigations of hackers will often have national security dimensions. So far, however, no one has raised the slightest suggestion of political interference. Until the risk of politicization of network investigations is something other than theoretical, this restriction should be lifted.

This change could be accomplished by a blanket approval by the Attorney General for the sharing of information on attacks with national security significance. But such approval has not been forthcoming, and it therefore should become the subject of high-level agreement between DoD and Justice.

Once again, the task force notes that this restriction falls into a pattern, in which FBI and Justice entities that are tasked with interagency responsibilities attempt to justify restrictions by saying that they are simply applying the Justice/FBI rules that usually apply to "criminal investigations." That is precisely the problem: these investigations are not exclusively matters of concern to prosecutors and investigators, and they cannot be treated as though Justice Department policies are the beginning and end of analysis. Unless the "business as usual" mentality at Justice and the FBI can be shaken loose in some form of agreement, DoD will have to create its own, separate capabilities, free of parochial constraints imposed for law enforcement reasons.

RECOMMENDATION 1.3:

Title III intercept information should be shared with DoD for purposes of assisting DoD in preventing attacks on its computer networks.

Sooner or later, usually sooner, any serious investigation of a network attack requires a wiretap. This allows investigators to intercept the communications between an attacker and the sites the attacker uses to launch (or launder) his attacks. Electronic intercepts are a fundamental tool in combating network attacks. But as things now stand, they usually can only be performed as part of a criminal investigation using the authority conveyed by Title III of the Omnibus Crime Control and Safe Streets Act of 1968. (Foreign intelligence intercepts can also be used inside the United States, but only if the target is an agent of a foreign power – something that is difficult if not impossible to determine at the outset of a hacker investigation.)

Use of criminal wiretap authority is in some respects easy. Hacking into other people's computers is a crime, so that the prerequisites for a Title III intercept order for data may be quickly met. But there's a catch. Once the data has been gathered under a Title III order, it may not be shared with DoD or other national security bodies. At least that is the view of the Justice Department, which interprets Title III as prohibiting such sharing. In the task force's view, the Justice Department's reading of Title III is at best arguable, and shows far too little concern for national security.

The statutory language in dispute is not lengthy. Under Title III, information derived from an intercept may only be used "to the extent that such use is appropriate to the proper performance of [the] official duties" of the law enforcement officer who has obtained the information. (*See* 18 U.S.C. § 2517 (1) and (2)).) This language would not bar DoD from receiving Title III information if "the official duties" of law enforcement officers include

Page 1156 of 3957

protecting national security and preventing additional crimes. At one time, the Justice Department's Office of Legal Counsel (OLC) took a similarly broad view of the "official duties" language, concluding for example that the Justice Department could provide Title III information to congressional committees on the theory that responding to congressional inquiries is part of a government employee's "official duties." No longer -- after considerable delays, the OLC has recently issued an opinion that overrules its earlier interpretation and concludes that Title III authorizes only sharing of intercept information for official *law enforcement* uses.

The OLC opinion further concludes that this ambiguous intent is not overcome even by the National Security Act, which expressly grants the Director of Central Intelligence "access to all intelligence related to the national security which is collected by any department, agency, or other entity of the United States." (*See* 50 U.S.C. 403-4(a)(1994)). Finally, it dismisses a Reagan-era executive order directing all agencies to give the director of Central Intelligence "access to all information relevant to the national intelligence needs of the United States." (*See* Executive Order 12333 (1981))[6]

In the view of the task force, the OLC opinion is questionable as a matter of statutory construction, and it almost willfully ignores the national security implications of its conclusions. A careful reading of the law, as well as strong public policy concerns, argue in favor of the disclosures at issue here. OLC's contrary decision casts real doubt on the willingness in the Justice Department to give due weight to Defense Department interests when carrying out missions that mix national security and law enforcement.[7]

The OLC opinion suggests that it is appropriate to lean against sharing of Title III data because of privacy concerns. Privacy is indeed important, but as noted earlier one may wonder: will the targets of Title III wiretaps really be comforted by the knowledge that the contents will be provided to prosecutors' secretaries, perhaps even to IRS auditors – but not to defense and intelligence authorities? There is of course an extra bit of privacy in any restriction on distribution of private information, but it is difficult to agree with the Justice Department's decision to treat this relatively minor gain for privacy as more important than the significant loss in terms of national security. The additional privacy benefit is particularly attenuated in the context of hacker intercepts. What makes classic wiretaps so troublesome from a privacy perspective is that they capture often-intimate conversations between parties who trust each other and believe their conversations will remain private. But intercepts of hacker attacks are typically focused on signals sent by the hacker to a victim's computer. The tap simply provides a quick

---

[6] We should note that this opinion was resisted by NIPC on grounds that it is unnecessarily restrictive, while at the same time one of the principal OLC contributors to the opinion is now part of the office of the DoD General Counsel.

[7] Other aspects of the opinion do little to dispel this view. For example, OLC determines that intelligence agencies will be allowed access to intercepts in one circumstance – when they have been firmly subordinated to law enforcement and are simply putting their resources at the disposal of prosecutors and criminal investigators. *Then*, the opinion declares, there is no problem with sharing intercept information. In short, if the Justice Department's interests are served by sharing, the sharing is legal; if not, not.

The opinion also contains a remarkable passage to the effect that if a law enforcement intercept produces urgent national security information, then the President can order that it be shared with intelligence agencies. Given the National Security Act and Executive Order 12333, one might think that Congress had already authorized such an order and that the President had already issued it, but having rejected that obvious conclusion, the opinion is forced to find that the President has retained some inherent authority to order such sharing anyway, but that the authority should only be exercised in desperate circumstances. The opinion takes a convoluted course to arrive at a position that could have been achieved by giving a straightforward reading of the National Security Act.

Page 1157 of 3957

way to capture keystrokes that are themselves part of the crime and that would not qualify under most people's definition of a communication, let alone a communication entitled to the highest possible privacy protection. These keystrokes may well be protected by Title III, but it is difficult to justify expanding their protection in the face of a law and an executive order that clearly require the Justice Department to share any intelligence relating to national security.

An OLC opinion is binding on the executive branch, but interpretations can be overturned, as this one overturned an earlier decision. The task force urges that the opinion be reconsidered in the context of a broader agreement on NIPC's information-sharing policies.[8]

RECOMMENDATION 1.4:

Rule 6(e) on sharing grand jury information should be clarified to permit sharing for national security purposes; until this is accomplished, computer crime investigators should be prohibited from using grand jury subpoenas without the express approval of NIPC, acting with interagency agreement.

Unfortunately, Title III is not the only criminal provision that prevents defense and intelligence agencies from gaining the full benefit of information obtained by criminal investigators about network attacks. Another provision with an impact on information sharing is Rule 6(e) of the Federal Rules of Criminal Procedure, which provides that attorneys for the government "shall not disclose matters occurring before the grand jury, except as provided for in these rules." Specifically, information may only be disclosed when permitted by the court, or to an attorney for the government or to "such government personnel ... as are deemed necessary by an attorney for the government to assist an attorney for the government in the performance of such attorney's duty to enforce federal criminal law". (*See* Rule 6(e)(3) (A) and (C)).

Unfortunately, the Justice Department has taken a narrow view of its authority to share information under this rule. To make matters worse, NIPC has taken an expansive view of what materials are covered by the rule. And, finally, Justice Department prosecutors continue to use grand jury subpoenas where other processes could be equally effective, unnecessarily expanding even further the body of material to be withheld from DoD and other agencies.

This report examines each of these three concerns separately. But first, it may be worthwhile to note that grand jury secrecy, while often praised as a protection for criminal suspects' privacy, actually serves the prosecutors' interests at least as well as the defendants'. The privacy rationale is that grand jury secrecy protects those who are investigated and not indicted, or not

---

[8] If this cannot be done, we suggest that NIPC and the Justice Department maximize "parallel sourcing" of information that might otherwise only be obtained through the use of Title III. For example, some information produced from a wiretap targeting a hacker would also most likely be available directly from the computer of the victim, particularly once monitoring software was installed. We recognize that this is not a complete solution; if all the information produced by a wiretap could be harvested in another fashion, the wiretap would not be approved, since by law an intercept can only be used with necessity. Nonetheless, procedures to automate and make routine such parallel sources are worth considering. (Even this limited solution creates new difficulties, however. While systems administrators have nearly total discretion to install monitoring software to protect their systems, the Justice Department fears that the use of such software at the direction of criminal investigators will lead to legal problems later. The victim of the attack and its system administrator may find themselves deemed to be agents of law enforcement if they cooperate too enthusiastically with the FBI and Justice. This is yet another example of a problem we encountered over and over; while law enforcement authorities provide a quick basis for gathering information about network attacks, they often bring with them so much encrusted criminal law doctrine that in the end the use of law enforcement authorities may not be worthwhile. We discuss later in the report some methods of addressing this problem, including the use of a civil remedy that avoids the need to bring in criminal authorities.)

Page 1158 of 3957

indicted for everything examined in the investigation. In this vein, keeping grand jury proceedings secret prevents the release of derogatory information that ultimately was insufficient to persuade the grand jury to charge a crime. In this context, of course, it is *public release* of the information that is most important to prevent – the information is not kept from investigators, prosecutors, or the grand jurors. Thus, as a matter of policy, this vital privacy interest would seem to be best protected by making sure that any officials who have access to the information are subject to a confidentiality requirement.

It is not clear that barring dissemination of grand jury information to DoD personnel – who may already be subject to more stringent confidentiality disciplines than Rule 6(e) – adds much in the way of privacy protection for those under investigation. This is particularly the case today, when practically any harm to U.S. vital national security interests can also be investigated as a crime. In such investigations, the national security and criminal processes are already intimately coordinated. As a result, the national security agencies know quite well who is being investigated for, say, a major terrorist incident, and they already know what information the criminal investigators hope to obtain from the criminal process. In those circumstances, the suspects' privacy interest in preventing DoD from knowing that they are suspects is already fatally compromised. The case for withholding grand jury information from DoD on privacy grounds in cases where national security is at stake thus seems questionable at best.

Of course, prosecutors have their own reasons for defending the principle of grand jury secrecy, one that has nothing to do with the privacy of the suspect. Grand jury secrecy rules allow prosecutors to keep an investigation secret from the defendant, thus reducing risk of flight, intimidation of witnesses, and premature disclosure. While the commitment of prosecutors to keeping their plans secret is praiseworthy, in the task force's view this commitment must be balanced against the security needs of the nation. Prosecutorial secrecy cannot be absolute, and Rule 6(e) should not be read to protect it absolutely. Again, in almost every case of national security concern, such as terrorism investigations, criminal investigators are likely to reveal all facets of their investigations to the national security agencies and personnel involved in the investigations. Law enforcement already expects national security personnel to protect investigators' secrets as intensely as they protect classified information, with generally good success. Given all that, there is no obvious policy reason why the fruits of one particular investigative technique – grand jury subpoenas – should be kept from DoD to protect the prosecutors' interest in confidentiality.

A. Dissemination of grand jury information to DoD should be permitted

Given the weakness of the policy reasons for not sharing grand jury information, and the vital importance of allowing DoD access to information with a bearing on national security, the Justice Department should have taken a broad view of the dissemination authority already provided in Rule 6(e). As mentioned above, the rule allows dissemination to "such government personnel ... as are deemed necessary by an attorney for the government to assist an attorney for the government in the performance of such attorney's duty to enforce federal criminal law". (*See* Rule 6(e)(3)(A) and (C).) If the "duty to enforce federal criminal law" includes preventing or deterring assaults on networks of national security concern, sharing 6(e) information with DoD for that purpose is completely permissible. Since the rule also seems to leave the final decision to the attorney for the government and what he or she has "deemed necessary," one would have thought that a broad interpretation was eminently sustainable. After all, courts have allowed

Page 1159 of 3957

prosecutors to share 6(e) information with state bar grievance committees, judicial councils investigating a judge's misconduct, and congressional committees considering impeachment. It is not unreasonable to conclude that protecting DoD networks from what may be state-sponsored attacks would be at least as important to the enforcement of federal law as disciplining private members of the bar.

In 1997, however, the Office of Legal Counsel once again adopted a position that does little to accommodate the concerns of national security bodies. Despite the sweeping language of the National Security Act, which commands all federal agencies to provide all intelligence-related information to the Director of Central Intelligence, OLC gives conclusive weight to one line from a 1983 Supreme Court decision, *Illinois v. Abbot & Associates, Inc.* In that case, the court refused to give state attorneys general access to federal grand jury testimony despite a federal law requiring the Attorney General to disclose information to state authorities in joint antitrust enforcement matters. In that context, the court declared that "we will not infer that Congress has exercised [its power to override grand jury secrecy] without affirmatively expressing its intent to do so." (*See Illinois v. Abbot & Associates, Inc.*, 460 U.S. 557, 572-73 (1983))

In the light of the Supreme Court's language, OLC's reasoning here is more justifiable than its opinion on Title III, but it is still highly questionable. One may reasonably doubt that the Court would have applied the same reasoning in the context of legislation on national security – a field where Congress speaks only rarely and then in the most general terms. But OLC saw no reason to hesitate; it applied the Court's language without regard for context. This application would be moderately persuasive if OLC had been willing to accept the logical consequences of its position. But OLC faced the obvious risk that such a strict rule would lead to disaster in the real world – where criminal and national security concerns overlap ever more often. What would happen, OLC was asked, if grand jury testimony uncovered vital matters of national security that then could not be disclosed to intelligence authorities (e.g., a plot to bomb an allied government facility abroad)? In the face of this concern, OLC faltered. If such information was uncovered, OLC declared, the President would have "inherent" authority to receive and order the sharing of information covered by Rule 6(e). This of course is the only responsible answer. But if the President has that authority, it is unconvincing to suggest that the President did not exercise it when he issued Executive Order 12333, which already requires all agencies to share intelligence information of any kind with the Director of Central Intelligence.

In short, the 1997 opinion is internally inconsistent and deserves reconsideration in the context of a broader agreement on information sharing about network attacks.

B. Materials obtained by grand jury subpoena should be shared with DoD.

The restriction on sharing grand jury information raises a second question: what is the scope of this restriction? Clearly, testimony given before a grand jury is a "matter occurring before the grand jury." If that were the full scope of the Rrule, it probably would not be worth discussion here; such testimony rarely figures in investigations of the sort that NIPC conducts. (Moreover, if the same statements are made in the grand jury and in interviews to agents prior to grand jury testimony, as is often the case, the interview notes can almost always be divulged without running afoul of Rule 6(e).)

The problem is that Rule 6(e) can be read as extending not simply to testimony, but to documents and other information obtained by means of a grand jury subpoena. If Rule 6(e) is

Page 1160 of 3957

read as barring DoD access to such information, it will impose significant barriers to prompt and easy sharing of information about network attacks with national security significance.

This task force is not in a position to canvass all of the case law about how Rule 6(e) might apply to subpoenaed materials, except to note that there is some divergence in the courts on this point. Prosecutors have successfully argued in some cases that disclosure of subpoenaed materials might disclose the direction of the grand jury's inquiries.[9] Given this tactical value to prosecutors of grand jury secrecy, it is understandable that the FBI and Justice Department have reason to give Rule 6(e) a broad scope. Even so, there is reason for concern that NIPC's information-sharing protocol goes well beyond the requirement of Rule 6(e). For example, it expressly states, "For purposes of this Protocol, Grand Jury information also includes any material obtained pursuant to a grand jury subpoena." It is not limited to testimony or even to materials that would disclose the grand jury's lines of inquiry.

Whatever the reasons, it is difficult to see why the FBI or Justice should insist on this broad interpretation in the context of sharing information with DoD. Privacy concerns are particularly limited in this context. First, confidentiality agreements can be used to prevent DoD personnel from publicly releasing data in question. Second, whether subpoenaed information is protected by Rule 6(e) is often a matter of mere chance. Information identical to that obtained through a grand jury subpoena may usually be obtained by means of other criminal process that is not subject to Rule 6(e) – grand jury subpoenas are often used simply because they are faster or simpler to obtain than court-ordered discovery. Privacy is tenuous at best when it depends on the form that an investigator happens to fill out in the course of gathering evidence. And information should not be withheld from national security agencies simply because law enforcement used the path of least resistance to obtain it.

C. Investigators' use of grand jury subpoenas should be more effectively disciplined.

If it proves impossible either to limit Rule 6(e) to grand jury testimony or to give full effect to the executive order already requiring intelligence sharing, the difficulties arising from Rule 6(e) can still be minimized. Justice and the FBI could take internal action to greatly reduce the impact of Rule 6(e) on NIPC's ability to share information.

While it is legally necessary for the government to use some form of criminal process to obtain subscriber information from Internet Service Providers, investigators often have a choice of methods. They can obtain the information through grand jury subpoena or through an order under 18 U.S.C. § 2703(d). Information gathered under section 2703(d) is not subject to Rule 6(e) or its restrictions. The practical problem is that grand jury subpoenas are easier and faster to obtain – prosecutors need only show that the information sought is relevant to a criminal investigation. In contrast, obtaining a court order under section 2703(d), which would make a broader range of information available to investigators than that released pursuant to a subpoena, requires that the prosecutor state specific and articulable facts showing that evidence relating to a crime will be obtained, and present the proposed order to a judge.

A prosecutor or investigator in a hurry is likely to use a grand jury subpoena without worrying much about the problems it will later cause to other agencies in need of the

[9] Again, it is worth noting that this consideration is of doubtful weight in a context where investigators' non-grand-jury inquiries are already thoroughly coordinated with national security agencies.

Page 1161 of 3957

information. Current Justice Department policy encourages prosecutors to consider alternatives to grand jury subpoenas, but it is not clear that this suggestion is enforced by more than suasion. NIPC and Justice should establish rules prohibiting investigators and prosecutors from using grand jury subpoenas in investigating network attacks unless no other form of process will be as effective. Furthermore, investigators and prosecutors who persist in the use of grand jury subpoenas should be disciplined. The task force recognizes that sometimes speed is essential, and a grand jury subpoena is the fastest option. In that event, a second form of process should also be used to obtain the information in shareable form.

D. Legislative and executive solutions should be explored.

In the absence of (or in addition to) any other action, the position taken by OLC on sharing of grand jury information with DoD could be corrected, either by Congress or by executive order. Congress could make it clear that the National Security Act does indeed allow sharing of grand jury information with national security authorities. And the President could make it clear that Executive Order 12333 is intended to have the same effect. (In the context of national security, where the executive's authority is great, an executive order expressly requiring the sharing of Rule 6(e) information would very likely meet the "express statement" requirement set by the Supreme Court in *Illinois v. Abbot*.)

Before turning to the next recommendation, it should be noted that Justice and NIPC both take the view that Rule 6(e) has not often been a serious obstacle to information sharing in the context of network attacks. The task force agrees that a properly administered interpretation of Rule 6(e) should resolve most of the concerns. At the same time, no one asserts that Rule 6(e) never has or never will cause difficulties in the context of national security or network attacks. Moreover, Rule 6(e) is one of the obstacles to information sharing that is invariably raised by law enforcement as an essentially unsolvable legal problem. Coincidentally, this "unsolvable" problem also prevents complete openness with non-law-enforcement personnel, and ultimately forces a sharp distinction between the groups. In the task force's view, this insistence on separate regimes is itself likely to be a source of continued conflict and inefficiency. Every effort should be made to reduce or eliminate legal and cultural barriers to a seamless interaction of DoD and law enforcement personnel in the area of critical infrastructure protection.

RECOMMENDATION 1.5:

NIPC should report directly to the Director of the FBI and the Deputy Attorney General.

NIPC is – or could be – a vitally important interagency office. Assuming it can overcome the information-restricting policies criticized above, it has a large role to play in identifying and helping to respond to critical infrastructure attacks.

At present, however, NIPC is buried deep under a heavy FBI bureaucratic structure. It must pass through several levels of review before it can reach a Presidential appointee of any kind. This of course has unfortunate consequences for the office itself, but the concern is for the interagency process. It simply is not credible for the head of NIPC to perform an interagency coordinating function if his decisions must clear through three or four levels of FBI review before they reach the Director (let alone the Justice Department). Other agencies with flatter hierarchies will be discouraged from participating in NIPC's interagency coordination process if

Page 1162 of 3957

the decisions reached in that process are subject to reconsideration at the insistence of mid-level FBI officials.

Indeed, some of the information-sharing disputes described to us festered longer than necessary because there was no ready way to escalate and resolve the issue at a level where some perspective could be achieved.

The task force recognizes that offices the size of NIPC rarely report directly to the Director of the FBI. For administrative and budgetary purposes, it may make sense for NIPC to be subsumed into a larger whole. But for policy and interagency matters, it should have a direct line, at least to the Director. Because resort to a political appointee may often be necessary to resolve interagency disputes, the task force also believes that NIPC should have direct access to the Deputy Attorney General.

RECOMMENDATION 1.6:

As part of a satisfactory framework agreement, DoD should upgrade its contribution to NIPC.

Although DoD's contribution to NIPC staffing is the largest outside the FBI itself, DoD has not sent as many detailees as it could, nor has it taken all possible steps to make a detail to NIPC as attractive as possible. In part, this may reflect doubts about whether detailees will be able to provide value to DoD while serving at NIPC. Assuming that problem is solved satisfactorily, DoD should take action to make sure that it sends a larger contingent of experts and properly supports them while on detail.

In general, this means that tours at NIPC should be two years, something toward which DoD now strives with only partial success. In addition, DoD should strongly consider making service at NIPC a "joint" assignment of the sort necessary for promotion to the higher ranks of the armed services. This would increase its attractiveness as a posting for military officers, and would help to ensure that NIPC is staffed with the highest quality detailees possible.

RECOMMENDATION 1.7:

DoD should clarify the role of NIPC in deciding how to respond to intrusions into DoD networks.

Any institution faced with a hacker, especially a persistent and successful hacker, has to make difficult judgments about whether to give top priority to blocking the attack or to observing the attacker's *modus operandi* in the hope of learning enough to identify or neutralize him. Locking the attacker out stops the immediate hemorrhage, but it may simply teach the hacker to switch to tactics that are less visible to the defenders, making the situation worse rather than better. Additionally, blocking out the hacker eliminates virtually any possibility of identifying the attacker and ascertaining his motives. But watching and waiting means that the hacker will continue to exploit the system.

The question for the government is: who should make the decision as to whether an attack should be blocked or watched? Within DoD the "block v. watch" decision is supposed to be in

Page 1163 of 3957

the hands of the commander whose system is attacked. If more than one commander has information on the systems being attacked, the decision is evidently made by the Joint Task Force – Computer Network Defense (JTF-CND). At least one DoD element has made the decision to deploy tools that could tip off attackers, despite concerns expressed by law enforcement and perhaps other DoD elements about the "noisiness" of such tools. In the course of the debate over how to respond in that case, at least some DoD officials felt that NIPC and Justice were asserting the authority to influence the final decision. NIPC and Justice both deny any intent to assert such authority. Whether or not they did, the fact that neither should make this decision should be clarified in any agreement over NIPC's role in critical infrastructure decision making.

At the same time, assigning responsibility for the decision is not the same as concluding that other agencies have nothing to offer the decision maker. NIPC has established a process for addressing "block v. watch" decisions. NIPC's structure calls for a "senior group" review at which all interested agencies are represented. The senior group is a consensus body. Although NIPC may convene meetings, the head of NIPC is not supposed to have any more authority than any other participant. The senior group review process apparently has been useful in some circumstances, producing consensus decisions about how to handle sensitive investigations.

There are nonetheless some difficulties with this structure. It is not part of any formal understanding with any of the agencies involved. Thus, in the absence of a clearly defined decision path, it would be easy for people to believe that NIPC had assumed unilateral authority over a particular decision. In addition, it is difficult for NIPC's interagency process to truly be a "senior" group when NIPC cannot speak for Justice or the FBI without clearing several internal levels of review.

There needs to be more clarity about the role of NIPC and the senior group in providing advice and making decisions about network attacks, including the "block v. watch" decision.[10] Neither this task force nor NIPC finds fault with the current DoD rule that this decision lies with the commander whose system has been attacked. This allocation of responsibility should be recognized in the agreement between DoD and NIPC. It might also be dealt with by a broader interagency agreement or Presidential directive. But it is crucial that the authority to make the decision be clearly assigned, and recognized by all concerned parties.

RECOMMENDATION 1.8:

NIPC should not make independent judgments about what information intelligence agencies may and may not receive; in particular, it should no longer rely on its erroneous view of NSA's authorities as a reason for restricting distributions to NSA's information security organization. Additionally, neither NIPC nor the Justice Department's Criminal Division should have any role in deciding how DoD entities should share information with NSA or other intelligence agencies.

The final area that should be clarified relates to information sharing with the National Security Agency (NSA). NSA has great resources and experience in this field. In addition to its

[10] It is also important to note that, at least at the outset of an attack, it may be difficult to determine with any precision which systems are involved in the attack and whether the attack is state sponsored.

Page 1164 of 3957

well-known intelligence-gathering mission, it has direct responsibility for the security of DoD information systems. Its experience and analytic capabilities on both the offensive and defensive sides make it a valuable participant in any effort to defend against network attacks. Depriving NSA of information about network attacks should therefore require substantial justification.

In actual practice, NIPC and Justice officials have shown considerable reluctance to give NSA information about network attacks, a reluctance that has often been justified by reference to legal concerns. But the need for clarification goes well beyond NIPC. In fact, even DoD itself has shown confusion about what information may lawfully be shared with NSA.

NIPC in particular frequently suggested that information sharing with NSA should be restricted to prevent an intelligence agency from gaining access to information about U.S. persons. There are two problems with this approach.

First, NIPC, the FBI, and indeed most of the Justice Department simply lack the expertise necessary to determine what limits apply to intelligence agencies' use of information. In general, intelligence agencies are barred from targeting Americans for surveillance, but they are not barred from reviewing information gathered elsewhere about Americans. (Any other rule would call into question the distribution of U.S. newspaper clips at intelligence agencies.) As a general rule, legal restrictions on intelligence agencies are grounded in the conviction that the fearsome capabilities of these agencies should not be aimed at U.S. citizens. But information in the hands of NIPC has not been gathered by intelligence agencies. Thus, allowing intelligence agencies to examine such information for analytic purposes does not point U.S. intelligence capabilities at American citizens.

Second, there is no reason to think that the usual intelligence oversight mechanisms are not functioning, or that NIPC or the Justice Department's computer crime experts should act as an intelligence oversight body. NIPC in particular should not seek to act as NSA's watchdog in a context where its actions might be construed as simply defending turf. In general, if there are questions about the lawfulness of intelligence agency access to particular information, NIPC's job should be limited to raising the issue with the relevant agency's general counsel, the Justice Department's Office of Intelligence Policy and Review, or both.

Along the same lines, the Justice Department's Criminal Division has encouraged a much-too-narrow view of when DoD may share with NSA information that it acquires in the course of administering security measures. The Department of Justice's Computer Crime and Intellectual Property Section (CCIPS) has argued that a DoD systems administrator should not share information about attacks on DoD systems with intelligence agencies. This is a harsh limit, since it prevents NSA from analyzing hacker tactics even when the hackers are attacking DoD's own computers. The origins of this notion lie deep in Justice Department lore. But in the task force's view, that lore has little relevance in other contexts.

Broadly speaking, Title III and its progeny make all intercepts of electronic communications illegal in the absence of a statutory exemption. This creates a potential problem for network operators and systems administrators, who often are exposed to the contents of communications over their networks and who sometimes actively monitor those communications to protect against security breaches. To make sure that this activity was not outlawed, Congress provided that the agents of a service provider may monitor communications "while engaged in any activity which is a necessary incident to the ... protection of the rights and property of the provider." In

Page 1165 of 3957

reliance on this provision, system administrators may record every keystroke a hacker makes while on their systems.

Sooner or later, instead of just watching the attacker, systems administrators may decide to call in the police. But unlike the systems administrator, the police may not simply record all of the communications of a criminal suspect, unless they have a court order. Faced with such a burden, the police are naturally tempted to ask the system administrator to continue monitoring for purposes of gathering evidence. To avoid this result, courts and the Justice Department have sought to prevent investigators from "tasking" service providers or otherwise turning systems administrators into agents of law enforcement.

At some point however, the Computer Crime and Intellectual Property Section came to believe that, if police and prosecutors could not work closely with systems administrators, then neither could intelligence agencies like NSA. The theory was that Title III only allowed monitoring of networks for security purposes, not for purposes of law enforcement or intelligence gathering.

There are two problems with this conclusion. First, it mischaracterizes NSA as simply an intelligence agency. While NSA does indeed gather signals intelligence, it also has another and quite separate mission – information security. This is carried out by a large office devoted entirely to providing information security for DoD. This office is not part of the intelligence community, it has no intelligence role, and for that reason it is not subject to the intelligence-targeting restrictions that apply to the intelligence side of NSA. In short, there is no reason to deny NSA's information security office access to information on the basis of intelligence agency limitations.[11]

Second, there is reason to doubt the Justice Department's assumption that if the police and prosecutors may not work closely with systems administrators monitoring a hacker, then no one may. In fact, police and prosecutors are subject to strict, court-enforced rules about how they gather evidence against criminals, and any deviation from those rules is likely to draw careful scrutiny. Therefore, for reasons having to do with public policy and judicial oversight, prosecutors are not allowed to circumvent those restrictions by "laundering" their evidence-gathering through systems administrators.

This is the most reasonable reading of the system administrator exception to Title III. For many reasons, systems administrators need broad authority to conduct monitoring, and as long as that monitoring has a plausible relation to a security concern, their actions must be lawful. Any other rule would require systems administrators to walk a knife edge each day, with the constant threat of felony prosecution if their subjective motives were deemed to fall over the fine line between proper monitoring (for a security purpose) and improper monitoring (for some other purpose). If the monitoring has been performed lawfully, Title III gives systems administrators virtually unlimited authority (under Title III) to disclose the results of the monitoring.

---

[11] To be fair, DoD has not always been clear on this point either. For example, doubts have been expressed about whether DoD logs showing the tactics of intruders can be shared with NSA analysts, since the nationality of the intruders cannot be known, though in many cases they hack in from U.S. hosts. The answer appears clear enough. First, the information security side of NSA is part of the DoD computer security apparatus. Anything that a systems administrator can review for security purposes can be shared with NSA's information security office. Since it is clear that doubts on this point remain even within DoD, it should be made plain both inside the DoD and in any framework agreement with NIPC.

Page 1166 of 3957

On that reading, there is little or no basis for the Justice Department to question the sharing of DoD system administrator logs with NSA – or other intelligence agencies for that matter. The ultimate goal of that sharing is better network security, and the role of the intelligence agencies in analyzing and circulating information about attacks is in many ways similar to that of the Computer Emergency Response Team (CERT), which also circulates intelligence gathered from systems administrators about attacks on their systems.[12]

RECOMMENDATION 2:

A Standardized and Simple Set of Procedures Should be Adopted to Allow Unannounced "Red Team" Attacks on All DoD Networks Without Excessive High-Level Intervention by DoD Lawyers.

The task force does not mean to leave the impression that all of the legal difficulties that have hindered DoD's preparations for information attacks can be traced to NIPC, the FBI, or the Justice Department. Some have been home-grown.

The effectiveness of "red team" operations in uncovering vulnerabilities in government computer networks is undisputed. Indeed, these simulation attacks have done much to show just how unprepared the United States is to defend itself against a significant information warfare offensive. In the past, however, conducting a red team attack on a DoD element has required extensive internal approvals, climbing up both the tested and testing agency command structure, and culminating in DoD General Counsel and Secretary of Defense approval on a case-by-case basis. This was because DoD took a belt-and-suspenders approach to the legality of red team intrusions. To ensure that there were no legal questions about the red team's right to gain access to DoD computer files, DoD sought assurances that all users had consented to red team access, which could only be determined after a review of each system. Since DoD users receive consent notices regularly both in hard copy and through system banners, this should not have been difficult to establish, but in the early days of the program, great care was taken to double- and triple-check the consents for each system and each exercise.

The task force believes that this degree of care is no longer necessary. The task force noted that DoD has made real strides lately in reducing the complexity of the red team approval process without any adverse consequences – and with real advantages in terms of security. The approval process is more streamlined, and red-teaming is no longer seriously constrained by determinations of consent. Nonetheless, the Secretary of Defense is still being asked to review individual red team exercises and certify consent. This is an unnecessary burden on the secretary and on the red-team process. Now that red-teaming is becoming a standard part of DoD security measures, the task force recommends that instead of reviewing individual exercises the Secretary simply certify periodically that DoD systems and users have consented to network monitoring.

[12] The fact that some of the information is circulated in classified form makes no difference; systems administrators themselves could choose to centralize corporate security information and circulate it to a limited number of trusted employees, and they could do so without worrying that gathering information for such purposes is somehow outside the scope of their legal authority.

RECOMMENDATION 3:

Specific Legislative Revisions Should Be Made to Facilitate Interagency Information Gathering and Sharing.

The proposals listed above focus on matters of agency policy and procedure that should be revised in order to facilitate more effective defensive information operations. The task force concentrated its attention on reforms that lie, at least in part, within the power of DoD. Of course, nothing would prevent Congress from acting to require a charter for NIPC, or from incorporating any or all of these recommendations for such a charter. But the task force sought to avoid issuing a report that was dependent on legislative action for its implementation.

Nonetheless, it became clear in the course of task force discussions that the current legal framework for defending against information warfare is flawed in several ways that only Congress can cure. The task force did not proceed from the assumption that this framework requires a complete overhaul. Quite the contrary, we resisted recommendations for legislative action whenever we thought the problem could be resolved by a more reasonable administrative interpretation. Despite this resistance, the task force became convinced that some changes in existing law are appropriate if a unified and effective response to information warfare is to be mounted. The task force's proposals for a legislative agenda in this field are contained below.

RECOMMENDATION 3.1:

DoD should have the authority to seek information about network attacks through a civil investigative order, specifically to combat attacks on systems of national concern.

Time and again, efforts to streamline information sharing have struggled with the structure of rules that has grown up around the class of information that is gathered in a criminal investigation. So long as information about attacks is gathered primarily through criminal investigative methods, that information will carry with it a set of legal and cultural rules that are hostile to the sharing needed to respond effectively to network attacks.

Perhaps the most egregious example of forcing all information gathering into a criminal law straitjacket is 18 U.S.C. § 2703(c). This provision of law limits the circumstances in which a service provider may disclose information about customers or subscribers to a governmental entity. For basic subscriber information (name, address and the like), the government must produce an administrative, grand jury, or trial subpoena. For more detailed "transactional" data about customers, the government must: (1) present a search warrant under the Federal Rules of Criminal Procedure or equivalent state warrant, (2) obtain a criminal investigative order under § 2703(d), (3) have the consent of the subscriber or customer, or (4) submit a formal written request for name, address, and place of business when relevant to a law enforcement investigation of a telemarketer. *See* 18 U.S.C. 2703(c)(1)(C).[13]

Even the most minimally competent cyber attacker uses multiple "hops" between computers to launch attacks. This permits the attacker to cover his or her tracks much more effectively. In consequence, tracking hackers requires a series of investigations, essentially tracking backward from one host computer to another. Typically, authorities will be able to use a victim's own logs

[13] Subparagraph (D) of the same section allows the gathering of certain information about subscribers using administrative, grand jury, and trial subpoenas. None of these subpoenas is suitable for most DoD inquiries, since one is criminal, another requires that a trial be imminent, and the third requires some administrative authority that is not obviously granted to DoD.

Page 1168 of 3957

to identify the initial source of an attack; they then contact the system administrator for the computer that is the source of the attack, ask for access to the logs of that host, and try to determine who was logged onto the computer at the time of the attack so as to determine the second "leg" of the hacker's travels. Once the second leg has been identified, the process is repeated, often many times. At every stage in this process, section 2703(c) limits the information that can be provided to government agencies.

It is worth noting that the restriction imposed by section 2703(c) applies only to requests for information made by government agencies. Internet service providers (ISPs) may hand out subscriber information on street corners to all comers without violating any provision of law; they may sell subscriber information to pornography spammers without violating any provision of law. (As a practical matter, of course, most ISPs have instituted privacy policies that voluntarily restrict distribution of customer data.) More realistically, they may share information about network attacks with other ISPs and hosts on a real-time basis without having to stop and invoke the judicial process at all. But they will violate the law if they provide information to a defense agency – even in the midst of a serious attack – without first seeing a criminal investigative order.

This is a remarkable state of affairs, and not one intended by the drafters of section 2703(c), or so one would hope. In general, if a government site is attacked and seeks information about the source of the attack from the first "hop" in the chain, the ISP with that information runs a slight risk that section 2703(c) will be violated if he simply tells the government what he knows about the intruder. That is because at this stage no one knows who the hacker is. He could be a subscriber or customer of the ISP. Chances are that he isn't, but why should the ISP risk civil liability? The prudent thing is to demand a criminal investigative order. Thus, in the name of protecting customers and subscribers, the current law actually puts a significant barrier in the way of protecting those who use government systems.

What's more, the provision essentially forces the government to treat all intrusions that require investigation as criminal matters. This serves no one's interests. If the culprit is a juvenile, prosecution is unsatisfying for the government and damaging for the defendant. Both might be better off if, instead of always relying on criminal investigations, the government could also gather necessary information while pursuing only civil remedies, such as fines, compensatory payments, or tailored injunctive relief. Indeed, some of the most important hacking investigations have not produced significant criminal penalties – at least not in the United States. (One investigation that consumed vast amounts of government resources finally tracked the exploits to two California teenagers and a young Israeli. No significant criminal penalties were imposed in the United States, and the Israeli proceedings have not yet produced a final result. Similarly, a 15-year old boy in Canada is the only person arrested thus far in the celebrated denial-of-service attacks in early 2000. The perpetrators of the "ILOVEYOU" virus will not be prosecuted in the United States.)

Allowing civil discovery in these circumstances is an option that deserves consideration. It is not without risks: ISPs and portals will not welcome any expansion of electronic communications discovery. At the same time, for DoD, there are advantages to information gained in a civil action. First, of course, it can be shared much more readily among agencies and through NIPC. It is not subject to grand jury secrecy concerns, nor to the Justice Department's restrictions on sharing information with NSC, nor is it likely to be "law enforcement sensitive." Indeed, since it would be gathered by DoD, it could be shared freely without even the restraints

Page 1169 of 3957

imposed by FBI culture on NIPC. This factor becomes extremely important when the target of an attack is a computer or network that is crucial to civil and national defense.

Second, being able to move from a purely internal defensive response to a civil investigative response will resolve another problem that has dogged DoD system administrators from the beginning of their work with Justice. This is the "prosecutorial agent" problem discussed above. In general, systems administrators may monitor as closely as they like those who intrude into their networks, without any legal prerequisites. DoD security officials have taken advantage of this fact, but they have complained that bringing criminal investigators into the matter often complicates their efforts to monitor an attacker. This is for the reasons described above – criminal investigators are acutely aware that they must have independent legal authority for intercepts and cannot turn a systems administrator into an agent of law enforcement. This is less of a risk if systems administrators are gathering information for a civil action.[14] Thus, network security officers could move from purely defensive monitoring to a civil investigation, including requests for information from third parties, without ever running the risk that a court would treat those actions as showing that the investigation is "really" a criminal investigation.

There are some drawbacks to the use of civil investigative authority. First, gathering data for the purposes of a civil investigation is complicated if, as with network attacks, there is a possibility of criminal prosecution. Second, DoD would need an appropriate civil discovery authority. And without some incentive to the ISP in question (such as an offer by DoD to pay the cost of expedited processing), the civil process could be significantly slower than a criminal one. Finally, many ISPs have instituted policies to provide notice to customers when law enforcement officials request data pertaining to them, a practice that effectively eliminates the secrecy of an investigation. Still, these are all issues that could be ironed out legislatively for the sake of protecting a nationally sensitive computer system.

A final issue that will undoubtedly be raised in this context concerns privacy. Should DoD be able to obtain subscriber information in network attack investigations without meeting the requirements for a criminal investigation? One may begin by asking whether investigating attacks on national security networks are as important as investigating telemarketers, since Congress has already exempted telemarketing investigations from the criminal subpoena requirements. What's more, a civil discovery authority limited to network attacks would not expose hackers to any greater risk of investigation than they now face; almost all network attacks can be investigated as crimes using criminal process. If necessary, Congress could require precisely the same standard for the civil discovery order as for a criminal order. If so, only two things would be different. First, the government would not be required to begin every investigation as though it was destined to end in indictment, and the authorities would be able to shape their legal response more sensitively in the light of the intruder's age, motives, and status. Second, the information would be gathered directly by DoD rather than the FBI and Justice. Whether that raises privacy concerns depends on which agency is considered more of a privacy threat. Certainly, there is no reason to think that DoD should be barred as a matter of principle from discovery aimed at civilians; defense investigators already serve a variety of civil processes on DoD employees and contractors, as well as ordinary discovery orders in garden-variety civil

[14] No one thinks that private companies may not lawfully ask their system administrators to gather information about hacker intrusions that they intend to use to sue the hackers. If there are real fears that current law somehow prevents the government from following this example, the statute authorizing the civil suit could no doubt also authorize the use of such information in support of the suit and for other network defense purposes.

Page 1170 of 3957

litigation. Properly structured, a civil discovery authority for network attacks would pose no greater threat to civilian privacy than the government's existing powers.

Network security would be greatly advanced, and the privacy status quo would be preserved, by a legislative provision overriding section 2703(c) and permitting the collection of data under a civil investigative order when the target of attack is a system of national security importance.

RECOMMENDATION 3.2:

The gap between law enforcement and foreign intelligence authorities to intercept hacker attacks should be closed, by enacting a "network trespasser" exception to Title III or otherwise.

Another somewhat surprising limitation on the ability of the FBI to gather information under criminal authorities has emerged of late. Under the Foreign Intelligence Surveillance Act (FISA), once a factual predicate has been established – that the target of an investigation is an agent of a foreign power – intercepts may be maintained for relatively long periods of time.[15] A Title III intercept, however, must be renewed every thirty days, with the Justice Department obligated to persuade the presiding judge that the tap is crucial to an ongoing criminal investigation.

But hacking investigations may take years without bringing investigators significantly closer to actually indicting a particular human being. Continuing the intercepts may be crucial to gathering information about the techniques used by the hacker and gathering clues about the hacker's identity and motives, but the process can be a slow one.

Sometimes a Title III intercept shows that the hacker is probably based abroad, and in such cases, over time, a criminal investigation will begin to appear futile. Hacking may not be a crime in the suspected country of origin, or the hacker may not be extraditable, or it may be impossible to get the cooperation of the local police. Gradually, the intercept begins to have less and less value as a criminal investigative tool, even though maintaining the tap may be highly important from an intelligence point of view. Sooner or later, then, prosecutors (at least the prosecutors in the Computer Crime and Intellectual Property Section (CCIPS) which is the source of this concern) are likely to reach the conclusion that the legal standard for continuing the wiretap is no longer satisfied. At that point, the prosecutors will refuse to seek additional wiretap authority – even though a criminal intrusion is still occurring, and even though the evidence may suggest that the intrusion is sophisticated enough to be state sponsored. The CCIPS view is that Title III is not an intelligence-gathering authority; unless a criminal case is in the offing, the tap must end, notwithstanding the value of the intelligence to national security. Of course, if it is clear that a foreign government is involved, a foreign counterintelligence tap can be initiated, but this is rarely clear. The result is that important intelligence about network attacks will be lost. In short, there is a very real possibility that foreign hackers will be able to attack DoD systems without any wiretap monitoring because both existing law enforcement and counterintelligence authorities are too narrow.

---

[15] FISA permits the surveillance of the agent of a foreign power under a court order, which must be renewed every ninety days. The foreign power itself may be targeted for an entire year under a court order pertaining to FISA.

Page 1171 of 3957

For this and other reasons (e.g., statutory information-sharing restrictions), Title III intercepts are an unappealing way to gather information about hacking efforts. That said, it is unclear what alternatives exist unless Congress addresses the problem. In that regard, two approaches should be considered.

First, the Justice Department, or at least CCIPS, would welcome DoD support for a "trespasser" exception to the protections of Title III. In essence, this would deny any statutory expectation of privacy to persons who are trespassing on another person's computer network. This is indeed an appealing approach, as hackers should not have any expectation that the signals they send to the systems of victims will be free from monitoring. This proposal has circulated within the Justice Department but has not been advanced officially. DoD should support such a measure.

A second possibility is to seek amendments to FISA that would allow the courts to presume that a foreign power is involved when attackers hop through hostile countries, attack critical systems, and/or use techniques that are thought to be particularly sophisticated or otherwise characteristic of foreign powers. There is some room for making this argument in the context of existing law, but it would obviously be easier if such considerations were part of FISA.

In so saying, the task force does not underestimate the difficulties of such a modification. The nation will not – and should not – tolerate long-term intelligence surveillance of Americans; no one wants to authorize FISA intercepts that turn out to be aimed at the activities of California teenagers. While it is likely that that result can be avoided if sufficient care is exercised in defining the events that justify such surveillance, any such amendment to FISA would need to be carefully drafted, vetted, and debated. Before making a change, it would be appropriate to ask (as task force members could not, being limited to a secret clearance) whether it is possible to utilize overseas intelligence collection resources to gather information on the attack, thus avoiding the need to invoke FISA at all. Intelligence collection efforts outside of the United States face fewer restrictions on gathering information relating to attacks than do domestic law enforcement investigations. For a variety of reasons, the task force thinks it unlikely that this is a complete answer, but it should be examined with care by DoD before making a final decision on the kinds of legislative changes that are appropriate to address the pressing problems that have been identified above.

RECOMMENDATION 3.3:

Procedural improvements should be made to streamline the "trap-and-trace" process and to allow emergency data requests under Electronic Communications Privacy Act (ECPA).

A. Trap-and-trace improvements.

When a network attack is being investigated, it is normal to obtain, first, a § 2703(d) order for information already in the hands of the first ISP in the chain of attacks, and, second, a trap-and-trace order authorizing future information collection for law enforcement purposes.

The use of trap-and-trace orders, however, has not been free from difficulty. Trap-and-trace orders are ordinarily obtained in the jurisdiction where the trap-and-trace device is to be placed (i.e., in the jurisdiction of the service provider). Since the Internet has little interest in

Page 1172 of 3957

geography, it is typically the case that every leg of a hacker's journey terminates in a different city, and with a different service provider. Often these providers are located in different jurisdictions, and obtaining the requisite orders can cause delays. Delay is the enemy of any investigation, but particularly of hacking investigations, as hackers often change their patterns regularly, sometimes as frequently as every few hours or minutes.

Delays in obtaining trap-and-trace orders for facilities in particular jurisdictions disrupt the ability of investigators to trace back along a hacker's attack chain. In particular, if there is a live connection, tracing back an attack quickly is difficult because each step in the chain may require a new order (because the carriers may be in different jurisdictions), each based upon the information discovered in prior orders. Moreover, the review by multiple courts does not substantively protect any rights, since the court in the victim's jurisdiction has already determined the appropriateness of the trace, and other courts are merely effectuating the order of the first court. Timing is also critical where the investigation concerns an attack that has already taken place, as the investigating agency must obtain a court order to trace the attack through activity logs before the service providers whose networks are used in the attack overwrite their records.

In response to this concern, investigators have expressed interest in obtaining a single national trap-and-trace order that could be served progressively on each service provider who has been the inadvertent host of a hacker on his journey.

In general, such authority would reduce the time it takes to track hackers, though there are many reasons for delays in tracking hackers from one computer to the next. Obtaining trap-and-trace orders is a contributor to those delays, but it is not the only contributor. For example, even with a nationwide order, it will still be necessary for the authorities to go from provider to provider in an achingly sequential fashion. This "one step at a time" approach is an unquestionable source delay in some hacking investigations.

Given these limitations, a nationwide trap-and-trace authority is not a panacea. But it would have some value to Justice and DoD in seeking to find network attackers as quickly as possible. For that reason, it deserves support – so long as that support does not detract from the other, higher priority, legislative reforms set forth earlier.

B. Emergency authority under ECPA.

A second revision also deserves consideration. Currently, there is no statutory provision for government to obtain information quickly under the ECPA in situations of extreme urgency. This is an oddity, since wiretaps, presumably much more intrusive, may be initiated without a judicial order in "emergency situations."[16] In such cases, where a communication must be intercepted "before an order authorizing such interception can, with due diligence, be obtained" (and where there are sufficient grounds to assume that an order would ultimately be granted), an intercept may be conducted in absence of authorization, provided that approval of the intercept is requested within forty-eight hours after "the interception has occurred, or begins to occur." (*See* 18 U.S.C. § 2518 (7))

---

[16] Emergencies are defined as involving:

(i) immediate danger of death or serious physical injury to any person;

(ii) conspiratorial activities threatening the national security interest; or

(iii) conspiratorial activities characteristic of organized crime

Page 1173 of 3957

The information that can be obtained through a subpoena or section 2703(d) order is sometimes equally essential to the investigation of a hacker attack, and providing specifically for emergencies would be useful. It would also protect the interests of ISPs and those under investigation. As things now stand, the lack of a statutory emergency provision means that in an emergency law enforcement agencies put heavy pressure on ISPs to release information even before the authorities can produce an order. The release of this information (which almost always happens) can expose the ISP to liability for violation of its privacy policy, and can cause law enforcement authorities to come to rely on the emergency justification (even in cases where the emergency isn't all that clear). In the long run, as customer privacy becomes the subject of greater scrutiny in state and federal legislatures, ISPs may discontinue their current practice and refuse to release any information in the absence of an order. The current provision in Title III allowing emergency wiretaps should be extended to court orders and subpoenas as well.

RECOMMENDATION 3.4:

Federal Rule of Criminal Procedure 6(e) should be modified to allow sharing of grand jury information relating to national security.

The task force has already discussed (see **Recommendations 1.3 and 1.4**) information-sharing burdens that are created by the use of grand jury subpoenas or Title III intercepts to gather information about network attacks. The task force recommended several ways in which these problems could be solved through reasonable accommodations of the national security by Justice and NIPC. In the event that these agencies are not prepared to make those accommodations, it may be necessary to overcome these obstacles legislatively. No one believes that either Title III or Rule 6(e) was written deliberately to exclude sharing for national security purposes. Very likely, it simply did not occur to the drafters to include a national security provision. Curing this oversight legislatively, perhaps simply by clarifying the existing National Security Act, ought to be a live option.

RECOMMENDATION 3.5:

Legislation should be enacted to encourage voluntary private-sector cooperation in hacking investigations, specifically to quell concerns that sensitive or proprietary information might be disclosed publicly.

Much has been made above of the legal barriers that prevent the government's access to or sharing of information when conducting hacking investigations. These are by far the most significant obstacles to efficient defensive information operations. They are not the only barriers, however, as even information that investigators could lawfully acquire is sometimes kept out of reach.

The investigation of cyber attacks need not be a one-way event, with law enforcement issuing various orders for information and service providers consequently handing it over. An ISP that falls victim to a hacker attack may justifiably hand over information about the attack, at the very least to prove that a crime has taken place. All too often, however, the private sector resists such voluntary cooperation with law enforcement. There are a number of reasons for this

Page 1174 of 3957

reluctance, most notably a fear that the information shared may be released under the Freedom of Information Act (FOIA).

So much of the nation's critical infrastructure is based in private hands that the importance of that sector's voluntary cooperation in investigations on network attacks should not be underestimated. This being the case, the government should adopt reasonable measures to encourage this cooperation. Agencies should be encouraged to expand the use of nondisclosure agreements in gathering information on network attacks. In addition, it would be worthwhile to consider supporting legislation that would restrict from FOIA disclosure any information that a service provider shares in conjunction with a hacking investigation (legislation to this effect was introduced in the last Congress and will likely be reintroduced). Such legislation should be narrowly tailored, so as to avoid creating an exemption behind which companies could conceal evidence of unlawful business practices from public discovery. Even with these limits, the provision could have significant benefits for investigators of network attacks.

ANNEX F

1996 DSB Report on Defensive Information Operations

STATUS OF RECOMMENDATIONS

Page 1181 of 3957

Current Assessment of Recommendations from the *Report of the Defense Science Board Task Force on Information Warfare – Defense (IW-D)*

(November 1996)

1996 Recommendation	Current Status	Current Shortfalls
1. Designate an accountable IW focal point. The SECDEF should:		
1a. Designate ASD(C3I) as the accountable focal point for all IW issues.	DoD Directive S-3600.1 "Information Operations," 9 Dec 96, designates ASD(C3I) as the responsible authority for IW/IO.	
1a(1). Develop a plan and associated budget beginning in FY97 to obtain the needed IW-D capability.	Components were required to address IA budgets beginning with FYDP 1999-2002. The DIAP was established by DEPSECDEF to better coordinate and align IA budgets and assure adequate funding. – this effort has provided better visibility for overall DoD IA budget.	• There are no specific line items for IA. • Shortfalls identified by DIAP have been faced with a shortage of additional funds.
1a(2). Authorize ASD(C3I) to issue IW instructions.	DoD Directive S-3600.1 "Information Operations," 9 Dec 96, designates ASD(C3I) as the responsible authority for IW/IO. In addition, the DoD implementation of the Clinger-Cohen Act designates the ASD(C3I) as the DoD CIO and assigns the responsibility for IA to the DoD CIO.	
1a(3). Consider establishing a USD(Information).	No longer required; the ASD(C3I) has been designated the DoD CIO.	
1b. Establish a DASD(IW) and supporting staff to bring together as many IW functions as possible.	The June 1998 reorganization within OASD(C3I) resulted in the creation of a DASD for Security & Information Operations, a position that includes responsibility for Information Assurance, Infrastructure Assurance, Security, Counterintelligence, and Information Operations Strategy and Integration.	This organizational structure resides within OASD(C3I) and primarily includes those activities currently within the purview of OASD(C3I). This structure does not readily accommodate the corresponding DIO-related requirements/issues within OUSD(A&T), including related R&D within DARPA and the Military Departments.

Page 1181 of 3957

1996 Recommendation	Current Status	Current Shortfalls
2. Organize for IW-D.		
2a. Establish a center to provide strategic indications and warning, current intelligence, and threat assessments. The SECDEF should request the DCI to:	NSA established the National Security Incident Response Center (NSIRC).	This organization is primarily focused on tactical activities rather than strategic activities, although in some cases, tactical level incidents may yield strategic insights.
2a(1). Establish an I&W/TA center at NSA with CIA and DIA support.	The DIA and JWAC are involved in this area.	There appears to be no overall DoD orchestrated approach to providing a strategic capability for DIO.
2a(2). Task and resource the Intelligence Community to develop the processes for Current Intelligence, Indications and Warning, and Threat Assessments for IW-D.	There are numerous activities within the Intelligence Community to address the intelligence requirements.	It is unclear as to how well these various activities are coordinated.
2a(3). Encourage the Intelligence Community to develop information-age trade craft, staff with the right skills, and train for the information age.	The DCI established the Advanced Research and Development Technology activity under NSA to focus on information technology as a multidisciplinary capability to the Intelligence Community.	The available skill set continues to fall well below the need.
2a(4). Conduct comprehensive case studies of U.S. offensive programs and a former foreign program to identify potential indicators – collection, funding, training, etc.	The DTRA "Chessmaster" case study is an example of the type of activity currently ongoing. Assessments continue as the capabilities and intentions of potential opponents change.	
2a(5). Establish an organization to examine and analyze probable causes of all security breaches.	NSA established the Network Incident Analysis Cell (NIAC) within the NSIRC to perform post network intrusion, forensic-style analysis of data received from incident response centers.	Analytical results and lessons learned are not effectively disseminated.
2a(6). Develop and implement an integrated National Intelligence Exploitation Architecture to support the organization and processes.	Intelligence Community activities in this area are ongoing.	Efforts are disparate and not integrated into a well-described plan.
2a(7). The SECDEF should direct the development of IW Essential Elements of Information (EEI).	Intelligence Community activities in this area are ongoing and JTF-CND is providing input into development of EEIs.	No final product or publication date has been set.

Page 1182 of 3957

1996 Recommendation	Current Status	Current Shortfalls
2b. Establish a center for IW-D operations to provide tactical warning, attack assessment, emergency response, and infrastructure restoration capabilities. The SECDEF should:	The DoD established the Joint Task Force – Computer Network Defense (JTF-CND) and the DISA Global Network Operations Center (GNOSC).	Concepts of Operations (CONOPS) for DIO mission execution are immature or do not exist. Where mission assignments have been made, lack of resources inhibits execution (e.g., USSPACECOM, JPO-STC).
2b(1). Establish a DoD IW-D operations center at DISA with NCS, NSA, and DIA support.	The DoD established the DISA Global Network Operations Center (GNOSC).	DoD does not universally collocate its Network Operations Centers with Information Assurance (IA) / Computer Network Defense (CND) activities.
2b(2). Develop and implement distributed tactical warning, attack assessment, emergency response, and infrastructure restoration procedures.	Currently, JTF-CND does distribute tactical warning, but has minimal attach assessment capability. Emergency response is primarily coordinated through the various CERTS/CIRTS of the Services / Agencies. JTF-CND also assists in establishment of restoration priorities with DISA and other activities.	Recommended improvements in GIG architecture and security could provide a technology baseline to permit creation of a tactical/time-sensitive information attack warning sensor grid. Such a network would also support goals of assigning attacker attribution confidently and rapidly. However, any plan to achieve this outcome must span the domains of policy/law, technology and organization, and would require actions in several sectors of government, as well as private industry.
2b(3). Interface the operations center with Service and Agency capabilities and I&W/TA support.	This requirement is stated in the JTF-CND Concept of Operations; JTF-CND interfaces with these organizations continue to strengthen.	DoD CERT/CIRT activities vary in their execution and are not inclusive of all DoD CINCs/Services/Agencies.
2b(4). Establish necessary liaison (e.g., with military and government operations centers, service providers, intelligence agencies, and computer emergency response centers).	This requirement was completed as a result of the JTF-CND Concept of Operations.	
2c. The SECDEF should establish an IW-D planning and coordination center reporting to the ASD(C3I) with interfaces to the intelligence community, the Joint Staff, the law enforcement community, and the operations center.	The Defense-wide Information Assurance Program (DIAP) was established in 1998. It serves primarily as a facilitator for the gathering and sharing of IA-related information. In that role, the DIAP has accomplished much in identifying what is being done throughout DoD, and continues to focus on unifying/integrating various IW-D activities.	• The DIAP has no real authority to direct the Military Departments or Agencies, and does not control or impact any IW-D aspects of Service/Agency budgets. • Internal staffing and funding shortfalls have further hampered the DIAP's ability to accomplish the mission.

Page 1183 of 3957

Page 1184 of 3957

1996 Recommendation	Current Status	Current Shortfalls
2d. Establish a joint office for system, network and infrastructure design.	There are current activities to develop, promulgate and implement Joint Technical Architecture (JTA), Joint Operational Architecture (JOA) and Joint Systems Architecture (JSA). Many recent efforts have centered on development of GIG architecture.	• There is no joint office to coordinate these various activities. • The GIG IATF standards and protocols for providing security are inconsistent with the JTA.
2d(1). Establish a joint security architecture/design office within DISA to shape the design of the DoD information infrastructure.	OASD(C3I), DISA, NSA, Joint Staff and Service representatives participate in the activities cited in 2d.	• There is no joint office to coordinate these various activities. • The IATF is a collection of history and general information; it is not a document that can be used to implement interoperable, secured information systems for DoD.
2d(2). Establish a process to verify independently and enforce adherence to these design principles.	The DoD established the Defense Information Technology System Certification and Accreditation Process (DITSCAP), as well the Secret And Below Interoperability (SABI) and Top Secret And Below Interoperability (TSABI) processes. Processes within the GIG governance arena are also being established to enforce adherence to GIG architecture requirements.	There are insufficient resources to implement DITSCAP, SABI, and TSABI at a pace that meets the demands within the DoD. Temporary waivers or work-arounds can prove counterproductive to the process.
2e. Establish a Red Team for independent assessments.	Some Red Team capabilities exist within the Services, NSA, and DIA.	Due to lack of clear policy and resources, aggressive, comprehensive, effective operational Red Team activities are lacking across DoD.
2e(1). Establish a Red Team which is accountable to SECDEF/DEPSECDEF and independent of design, acquisition, and operations activities.	No Red Team has been established to be directly accountable to the SECDEF/DEPSECDEF, independent of design, acquisition, and operations activities.	Without such an independent Red Team capability, current Red Team results may be questionable because of organizational affiliation/loyalties.
2e(2). Develop procedures for employment of the Red Team.	Thus far, the DoD has developed the Defensive Information Assurance Red Team (DIART) Manual.	Due to the lack of clear Red Team policy, there is no formal requirement for DIART to be implemented DoD-wide, and it is often ignored. This Red Team Manual provides the standardized procedures for any DoD Red Team, but absent a DoD Directive, there is no way to mandate their use. Additional, guidance needs to be provided on how results of the Red Teams (and any other assessment) are collected and analyzed to determine trends and lessons learned.

Page 1184 of 3957

1996 Recommendation	Current Status	Current Shortfalls
3. Increase awareness. The SECDEF should:		
3a. Establish an internal and external IW-D awareness campaign for the public, industry, CINCs, Services, and Agencies	In June 1998 the ASD(C3I) and the USD(P&R) jointly issued a memorandum that required IW-D user awareness and training. There are currently numerous IW-D training activities throughout the DoD.	Conflicting definitions and usage related to IO, IA and CIP within the DoD and Intelligence Community causes resource and equity fights within the federal National Security Community and inhibits progress in resource management, training, and other important areas.
3b. Expand the IW Net Assessment recommended by the 1994 Summer Study to include assessing the vulnerabilities of the DII and NII.	Over the past five years, OSD - Net Assessment made several attempts to assess various aspects of IO. In each case, the assessment's value was limited by a lack of meaningful metrics. While the assessment could catalog and relate interesting anecdotal information, it would not provide the Secretary with the factual information necessary to make programmatic decisions. Accordingly, Net Assessment shifted its focus toward developing metrics by which the value of information under differing circumstances could be measured.	The IW Net Assessment has not yet been accomplished.
3c. Review joint doctrine for needed IW-D emphasis.	Joint Pub 3-13 (Defensive IO) was issued on October 9, 1998. CJCSI 6510.01B (Defensive IO Implementation), issued 26 August 1998, is currently under revision, with the new version expected to be issued in January 2001.	Doctrine and implementation instructions need to be adequately tested in exercises and integrated into mission planning and execution.
3d. Explore possibility of large-scale IW-D demonstrations for the purpose of understanding cascading effects and collecting data for simulations.	The Joint Staff and CINCs have sponsored exercises in which IW-D was a component.	It is unknown as to whether there have been large scale IW-D demonstrations conducted solely for the purpose of understanding the cascading effects and for collecting data for simulations. The modeling and simulation community lacks maturity in tools to assess these effects.
3e. Develop and implement simulations to demonstrate and play IW-D effects (USD(A&T) lead)	Current status is unknown.	Current status is unknown.

Page 1185 of 3957

1996 Recommendation	Current Status	Current Shortfalls
3f. Implement policy to include IW-D realism in exercises.	The Joint Staff and CINCs have sponsored numerous exercises in which IW-D is a component. Exercise plans are increasing in sophistication to address these issues.	IW-D demonstrations do not effectively reflect cascading effects for collecting data for simulations.
3g. Conduct IW-D experiments.	DARPA and the C4I Joint Battle Center have conducted IW-D experiments.	It is unknown as to whether there have been large scale IW-D experiments conducted for the purpose of understanding cascading effects and collecting data.
4. Assess infrastructure dependencies and vulnerabilities. The SECDEF should:		There appears to be no overall DoD orchestrated approach to providing a strategic capability for DIO.
4a. Develop a process and metrics for assessing infrastructure dependency.	CIP (physical & cyber) analytical methodology has been identified and prototyped to link OPLANS / TPFDDs / Defense sector assets to analyze interdependencies	Prototype methodologies require thorough testing.
4b. Assess/document operations plans infrastructure dependencies.	CIP (physical & cyber) analytical methodology has been identified and prototyped to link OPLANS / TPFDDs / Defense sector assets to analyze interdependencies	Prototype methodologies require thorough testing.
4c. Assess/document functional infrastructure dependencies.	Defense infrastructure sectors are in the initial stages of performing sector characterization which will include intradependencies and interdependencies with other sectors	
4d. Assess infrastructure vulnerabilities.	DoD and JPO are beginning to develop protocol to include/integrate CIP (physical & cyber) assessments of defense infrastructures into existing assessment processes/procedures.	
4e. Develop a list of essential infrastructure protection needs.	Work in this area is currently ongoing.	No anticipated delivery date has been set for a final product/report.
4f. Develop and report to the SECDEF the resource estimates for essential infrastructure protection.	Estimates have been generated for initial CIP (physical & cyber) requirements to perform limited analysis and assessment.	Estimates must be refined, documented, and formally reported in order to promote appropriate action.

Page 1186 of 3957

Page 1187 of 3957

1996 Recommendation	Current Status	Current Shortfalls
4g. Review vulnerabilities of hardware and software embedded in weapons systems.	Not yet addressed. Recent changes in the DoD 5000 series and a Memo from USD(AT&L) adding security as an equal element to cost, schedule and performance for acquisition programs will assist in accomplishing this task. Reviews of some weapons systems were performed as a part of the Y2K effort and lessons learned should be incorporated.	• Lack of a formal requirement inhibits incentive to integrate these assessments into system development plans. • This area remains significantly vulnerable.
5. Define threat conditions and responses. The SECDEF should:		
5a. Define and promulgate a useful set of IW-D threat conditions which is coordinated with current intelligence community threat condition definitions.	INFOCONS have been established. CJCSI Memorandum of March 1999 served as vehicle for dissemination throughout the DoD. USSPACECOM is in the process of reviewing and revising the INFOCON process to make it more usable and ensure appropriate establishment and promulgation throughout DoD.	Interpretation of the INFOCONS varies within organizations, which can adversely impact their collective implementation.
5b. Define and implement responses to IW-D threat conditions.	Rules of engagement are currently undergoing legal review at Secret level.	DoD implementation of responses is hampered by existing and conflicting governing authorities and related rules of engagement.
5c. Explore legislative and regulatory implications.	Legislative and regulatory implications are currently being addressed through various activities within the federal government, as well as the DoD.	Current legislation and conflicting roles/responsibilities/authorities with the Department of Justice are impediments to the process.
6. Assess IW-D readiness. The SECDEF should:		
6a. Establish a standardized IW-D assessment system for use by CINCs, MilDeps, Services, and Combat Support Agencies.	CJCSI 6510.04 (Information Assurance Readiness Metrics), 15 May 2000, provides a standardized information assurance list of items to consider when preparing the information assurance portion within the JMRR C4 functional area.	There is no adequate system for assessing DIO readiness across DoD. CJCSI 6510.04 is relatively unknown within the Military Departments and, buried within the C4 functional area, has relatively little impact on assessing readiness. Although it establishes a baseline, it is neither mandatory, nor does it apply to all DoD activities.

Page 1187 of 3957

Page 1188 of 3957

1996 Recommendation	Current Status	Current Shortfalls
6b. Incorporate IW preparedness assessments in Joint Reporting System and Joint Doctrine, for example.	CJCSI 6510.04 (Information Assurance Readiness Metrics), 15 May 2000, provides a standardized information assurance list of items to consider when preparing the information assurance portion within the JMRR C4 functional area.	DIO is not adequately integrated into mission planning and execution. CJCSI 6510.04 is relatively unknown within the Military Departments and, buried within the C4 functional area, has relatively little impact on assessing readiness.
7. "Raise the bar" with high-payoff, low-cost items. The SECDEF should:		
7a. Direct the immediate use of approved products for access control as an interim until a MISSI solution is implemented and for those users not programmed to receive MISSI products.	NSTISSP No. 11, January 2000, requires that by 1 January 2002, acquisition of all COTS IA and IA-enabled IT products must be evaluated through the NIAP process. The NIAP provides a mechanism for certification of security products. NIST Special Publication 800-23 provides additional guidance in this area. In addition, the Defense in Depth strategy requires several levels of protection of networks and systems. Related security products include access control mechanisms (password control, PKI, biometrics), firewalls, intrusion detection devices, secure routers, etc.	
7b. Examine the feasibility of using approved products for identification and authentication.	The DoD PKI policy memorandum of May 1999 (replaced by the August 2000 Memo), establishes the DoD Public Key Infrastructure policy and Program Management Office (PMO). It establishes the desire to seek maximum use of COTS technology.	
7c. Require use of escrowed encryption for critical assets such as databases, program libraries, applications, and transaction logs to preclude rogue employees from locking up systems and networks.	Current DoD PKI policy addresses the use of escrowed encryption. The "insider threat" issue is being addressed by various efforts, one of which is through the Insider Threat IPT, which is looking at a spectrum of technical, policy, training, and other options to address this issue.	Systems Administrators have the "keys to the kingdom," yet often require no special "reliability" investigations, such as those in the Personnel Reliability Program.

Page 1188 of 3957

Page 1189 of 3957

1996 Recommendation	Current Status	Current Shortfalls
8. Establish and maintain a minimum essential information infrastructure. The SECDEF should:	Through the Y2K efforts, the DoD identified its minimum essential information systems ("thin-line"). This effort serves as a starting point for the CIP (physical & cyber) activities.	The critical infrastructures that are essential to the minimum operations of the economy and government are predominantly owned by the private sector. The DoD is extremely dependent upon these private sector systems, networks and infrastructures, but industry is not motivated to share information on their vulnerabilities with the government.
8a. Define options with associated costs and schedules.	Processes for defining and resolving associated funding requirements are under development.	
8b. Identify minimum essential conventional force structure and supporting information infrastructure needs.	Addressed, in part, in JV2010 and JV2020.	Significant personnel resource shortfalls impact execution of the DIO mission at all levels in DoD.
8c. Prioritize critical functions and infrastructure dependencies.	Under development.	No final product/report or due date has been defined or funding applied.
8d. Design a Defense MEII and a failsafe restoration capability.	The CIO organization is applying lessons learned from the Y2K experience in registering applications, determining mission critical/mission support and policies concerning NIPRNET access.	
8e. Issue direction to the Defense Components to fence funds for a Defense MEII and failsafe restoration capability.	No guidance issued to date.	The DoD continues to remain vulnerable.
9. Focus the R&D. The SECDEF should focus the DoD R&D program on the following areas:	The DIAP Research & Technology (R&T) functional area was established to provide focus in the DoD IA R&D areas. This functional area works primarily with the InfoSec Research Council (IRC), a voluntary member organization of a number of activities (DoD and non-DoD), doing IA research.	

Page 1189 of 3957

1996 Recommendation	Current Status	Current Shortfalls
9a. Develop robust survivable system architectures.	DARPA sponsored major program in this area.	• The DoD is managing its current information assurance R&D in a fragmented way that is not sufficiently focused on the information assurance requirements of the GIG. • The current DoD network architecture calls for a secure network with authorized access via tokens (i.e., PKI). The scope of this security apparatus is enormous, and PKI has not been modeled and tested under extreme requirements.
9b. Develop techniques and tools for modeling, monitoring, and management of large-scale distributed/networked systems.	Previous and ongoing IA R&D efforts are addressing this area.	Development and deployment of new network technology has greatly outpaced information assurance technology, thereby increasing the vulnerability of DoD systems.
9c. Develop tools and techniques for automated detection and analysis of localized or coordinated large-scale attacks.	Previous and ongoing IA R&D efforts are addressing this area.	• One of the weakest aspects of U.S. DIO is our extremely limited ability to detect, assess, and understand both hostile IO capabilities and precursor indications and warning of attack. • No methods exist for automated or assisted discovery of existing or novel attack patterns or signatures, particularly for those attacks which are distributed across many computes or networks. • Intrusion detection technologies curently produce only moderately reliable results in simple environments, and even less reliable results in complex environments.
9d. Develop tools for synthesizing and projecting the anticipated performance of survivable distributed systems.	Previous and ongoing IA R&D efforts are address this area.	DoD does not have a methodology for restoring integrity in its systems.
9e. Develop tools and environments for IW-D oriented operational training.	The Joint Battle Center is chartered to perform this work and has a number of on-going activities to address issues in this area.	The DoD is not aggressively or innovatively addressing its IA R&D personnel requirements, which will likely lead to more serious problems in the next few years as more personnel leave the department and fewer high caliber R&D managers remain.

Page 1190 of 3957

Page 1191 of 3957

1996 Recommendation	Current Status	Current Shortfalls
9f. Develop testbeds and simulation-based mechanisms for evaluating emerging IW-D technology and tactics.	Previous and ongoing IA R&D efforts are address this area.	Progress in defending and protecting the GIG will require a far greater ability to model and simulate the performance of information infrastructures than we have today.
9g. The SECDEF should work with the NSF to develop research in U.S. computer science and computer engineering programs.	NSA's Information System Security Engineering program is working with 7 universities in this area.	This NSA program is independent and not implemented with NSF.
9h. The SECDEF should work with the NSF to develop educational programs for curriculum development at the undergraduate and graduate levels in resilient system design practices.	NSA's Information System Security Engineering program is working with 7 universities in this area.	The degree to which the NSA program, which is implemented independent of NSF, is addressing curriculum development is unknown.
10. Staff for success. The SECDEF should:		
10a. Establish a career path and mandate training and certification of systems and network administrators.	An IT/IA Human Resources IPT was established to examine issues associated with the establishment of an IA/IO career path. An OSD memorandum in June 1998 addressed mandatory training.	The shortage of DoD IT professionals is serious and growing.
10b. Establish a military skill specialty for IW-D.	Skill specialties have yet to be established. The Joint Staff has a tasking to develop common skill sets for specific functions in this area. The military Services have all undergone major restructuring of their military skill sets to identify, recruit and retain professionals in this area.	The appropriate staffing of DIO positions continues to be severely hampered.
10c. Develop specific IW awareness courses with strong focus on operational preparedness in DoD's professional schools.	There are numerous activities in this area. IA awareness products and activities, and IA/IO courses, are provided at all professional military education facilities.	The DoD workforce at all levels is ill prepared to execute the DIO mission because current training efforts are fragmented, inadequately scoped, and poorly documented.

Page 1191 of 3957

Page 1192 of 3957

1996 Recommendation	Current Status	Current Shortfalls
11. Resolve the legal issues. The SECDEF should:		
11a. Promulgate for Department of Defense systems: • Guidance and unequivocal authority for Department users to monitor, record data, and repel intruders in computer systems for self protection. • Direction to use banners that make it clear the Department's presumption that intruders have hostile intent and warn that the Department will take the appropriate response. • IW-D rules of engagement for self-protection (including active response) and civil infrastructure support.	• Legal guidance has been promulgated and policies are under review regarding the monitoring and auditing of network activities. • Intrusion Detection Systems perform a portion of this function. • Guidance on configuration of the various devices is provided as technology changes. • Additional mechanisms to identify and warn intruders are being investigated, as well as a general announcement of DoD policy and intent through the normal media channels. • Rules of engagement issues, including active defense are being investigated to determine possible actions.	The use of banners can only address the "insider issue." Intruders into systems generally bypass standard entry routes and it is virtually impossible to set up mechanisms for banners to be present on all entry points.

Page 1192 of 3957

Page 1193 of 3957

1996 Recommendation	Current Status	Current Shortfalls
11b. Provide to the Presidential Commission on Critical Infrastructure Protection proposed legislation, regulation, or executive orders for defending other systems.	OBE, since PDD 63 was signed. However, there are a number of ongoing legislative activities being addressed among the NIPC, Federal CIO Council, and the CIAO.	• The DoD is suffering under existing legislation. Although it has the responsibility for national defense, it has been forced to rely on law enforcement agencies such as the FBI and the Justice Department to gather information about attacks. • Under existing law, network service providers may give away information about hacking attacks to the public, but they are legally prohibited from giving the information to a government agency unless the agency begins a criminal investigation. • There is no clear guidance as to which takes precedence: the confidentiality of criminal investigations or the national security interests of the United States. • Criminal wiretap authorities are inadequate for the government to maintain wiretap coverage of persons engaged in long-term hacking campaigns against government networks. • Current law concerning "trap and trace" orders often requires that law enforcement agencies seek multiple, sequential orders as they trace a single hacker from system to system.
12. Participate fully in critical infrastructure protection. Regarding the activities of the President's Commission on Critical Infrastructure Protection, the SECDEF should:		
12a. Offer specific Department capabilities to the President's Commission.	OBE, since PDD 63 was signed. However, there are a number of activities in the CIP area that are working with the CIAO to address the spirit of this recommendation.	

Page 1193 of 3957

1996 Recommendation	Current Status	Current Shortfalls
12b. Advocate the Department's interests to the President's Commission.	OBE, since PDD 63 was signed. However, there are a number of activities in the CIP area that are working with the CIAO to address the spirit of this recommendation.	• No one has the responsibility or authority to make response and recovery decisions and take actions across stovepipes. Coordination depends upon personalities. • The State Department is potentially very important to DIO, but is not sufficiently engaged. • A great portion of government doesn't understand DIO issues or appreciate the potential impact of information technology vulnerabilities on their operations.
12c. Request the Commission provide certain national-level capabilities for the Department.	OBE, since PDD 63 was signed. However, the NIPC, for which the DoD provides personnel resources, provides the law enforcement capabilities.	• There is no clear responsibility for rationalizing law enforcement and national defense equities when certain types of cyber attack are detected. • There is currently a bias toward using law enforcement authorities and procedures when a cyber incident is detected. Although this will be satisfactory in the vast majority of cases, no formal means exists to review cases to determine if national security procedures might be more appropriate.
12d. Suggest IW-D roles for government and the private sector.	OBE, since PDD 63 was signed. PDD 63 established roles and responsibilities.	
13. Provide the resources. Develop a plan and associated budget beginning in FY97 to obtain needed IW-D capability (ASD(C3I) lead)	The DIAP is currently attempting to obtain IW-D funding requirements from DoD organizations. With the improved visibility into DoD component budgets, areas requiring additional funding are being identified. The DIAP has established appropriate mechanisms through the PPBS process to identify and justify shortfalls – the issue is how to prioritize and obtain additional funding in a tight budget environment.	The Department has not sufficiently funded protection of its networks and DIO programs. Of particular concern in the Sensitive, But Unclassified (SBU) information, which is critical to JV2020.

TAB G-1

ISSUE PAPER

OVERSIGHT AND MANAGEMENT OF THE GIG EXECUTIVE DIRECTOR

Issue: Why the CIO Executive Board and the MCEB are not the right management vehicles to provide oversight and governance for the GIG Executive Director as recommended by the DIO DSB.

Background: The DIO DSB has recommended that at DoD "Information Superiority" Board of Directors (BoD) be established to provide oversight and governance for the GIG Executive Director, an office which would provide systems engineering resources for the Global Information Grid. The membership of this BoD would consist of: Chair, DEPSECDEF, USD(AT&L), Vice Chairman of the Joint Chiefs of Staff, ASD(C3I), and the DDCI.

Discussion:

- **DoD CIO Executive Board:** The current charter of the DoD CIO Executive Board is contained in the DEPSECDEF Memo Subj: DoD Chief Information Officer Executive Board, 31 March 2000. This charter states that the Council is the principal forum to advise the DoD CIO on the full range of matters pertaining to the Clinger-Cohen Act (CCA) of 1996 and the Global Information Grid. Additionally, the Board also coordinates implementation of activities under the CCA, and exchanges pertinent information and discusses issues regarding the GIG, including DoD information management (IM) and information technology (IT). The primary mission of the Board is to "advance the DoD's goals in the areas of IM, information interoperability and information security between and among Defense Components." The Board also coordinates with the IC CIO Executive Council on matters of mutual interest pertaining to the GIG. Its management oversight includes recommending, reviewing an advising the DoD CIO on overall DoD IM policy, processes, procedures and standards, as well as to oversee all aspects of the GIG to support the DoD's and IC's mission and business applications. This includes the collaborative development of IT architectures and related compliance reviews; management of the information infrastructure resources as a portfolio of investments; collaborative development of planning guidance for the operation and use of the GIG; and identification of opportunities for cross-functional and/or cross-Component cooperation in IM and in using IT. The Board's Architecture Management responsibilities include ensuring the collaborative development of architectures as specified in the CCA, and ensuring that processes are in place to enforce their standardized use, management and control, as well as aligning IT portfolios with the GIG. Although the Board has budgetary review authority for IT investments, and can make recommendations, it has no direct budgetary authority. It also has no authority, either review or management oversight into the warrior components of the GIG. The membership of the DoD CIO Executive Board includes:

Page 1196 of 3957

- Chair: DoD CIO (ASD(C3I))
- Members: CIOs of the Military Departments
  CIO, Joint Staff
  USD(AT&L)
  USD (P) (Policy)
  USD (C) (Comptroller)
  USD(P&R) (Personnel and Readiness)
  ASD (C3I) (usually the Deputy CIO)
  Director PA&E (Program Analysis and Evaluation)
  J6, Joint Staff
  OPNAV N6
  Director, Communications and Information, USAF, AF/SC
  IC CIO
  CIO, JFCOM (Joint Forces Command)
- Security Advisor: DIRNSA
- Technical Advisor: Director, DISA
- Legal Advisor: DoD General Counsel

- **MCEB:** The charter of the MCEB is contained within DODDIR 5100.35 dtd 10 Mar 1998. The MCEB is supposed to consider those military communications-electronic matters, including those associated with National Security Systems(NSS) referred to it by the SECDEF, CJCS, the DoD CIO, Secretaries of the Military Departments, and Heads of DoD Components. The mission of the MCEB is to obtain coordination among the DoD components, between the Department of Defense and other Governmental Departments and Agencies and between the DoD and representatives of foreign nations on matters under the MCEB jurisdiction. The MCEB provides guidance and direction to the DoD components and advice and assistance as requested. The membership, as listed below, is primarily the communications activities in the listed components, who have little, if any, authority over IT issues in other portions of their component. The MCEB has no budgetary review or execution authority over any component, nor is there any mechanism within the MCEB structure for enforcement of non-compliance with decisions. The relationship between the MCEB and CIO Executive Board is still being discussed, but in effect, the MCEB is a subordinate activity under the direction of the CIO Executive Board and recommendations referred to that Board for final decision. Membership of the MCEB includes:

  - Chair: Joint Staff, J6
  - Members: Vice, J6
    DISC4, U.S. Army
    OPNAV, N6
    HQ USAF, SC
    HQMC, C4
    USCG, Assistant Commandant for Systems

Director, DISA
Director, NSA
Director, DIA

- **General**: Neither the DOD CIO Executive Board nor the MCEB have the membership or authority over budgets and execution activities envisioned as necessary to ensure the GIG is built and managed as intended. Without that level of authority over all elements of the GIG, the architecture is subject to interpretation by each component based on their needs, rather than the needs of the entire organization. There is also little incentive to address cross-cutting issues in a coherent fashion when the funding for these programs is provided via Title 10 channels without some mechanism to force cooperation. Because of the Title 10 and DoD versus Intelligence Community issues, the only level of management senior enough to cross this bridge is at the DEPSECDEF level. Additionally, neither of these two boards has a direct oversight responsibility over any specific office or function which carries out its direction such as the relationship described between the GIG Executive Director's office (a function which does not currently exist) and the DoD "Information Superiority" Board of Directors.

Recommendation: That a body as described for the DoD "Information Superiority" Board of Directors be established to provide oversight for the implementation of the GIG. With the establishment of such a body, the relationship with existing organizations (i.e. CIO Executive Board and MCEB) must be defined and roles, missions and responsibilities clarified.

Page 1198 of 3957

TAB G-2

THE PROBLEM CONTINUUM – FROM DATA TO UNDERSTANDING

One problem of great concern in today's information age, is the overwhelming volume of data and information readily available over the Internet and through the wide range of sensors that support DoD activities. The push to provide more information to the commander in the field has many commanders concerned that they will be so overwhelmed with data and information that it may actually impede the decision making process.

The key to remedying this problem is recognizing and enabling the transition from data, to information, to knowledge, and ultimately to understanding. The concept of "Decision Superiority" put forth in Joint Vision 2020 requires a greater level of understanding in order to make timely and accurate decisions. DoD must identify those technologies and tools that will ensure the rapid transition from data to understanding, investing today, to build a capability that will enable Joint Vision 2020. Simply pumping more data to the front lines is not the answer. Joint Vision 2020 necessitates a more balanced approach including:

- Decreased dependence on data.
- Increased ability to identify key information.
- Larger degree of knowledge based on key information.
- Clear understanding of the information picture in order to gain and maintain Decision Superiority.

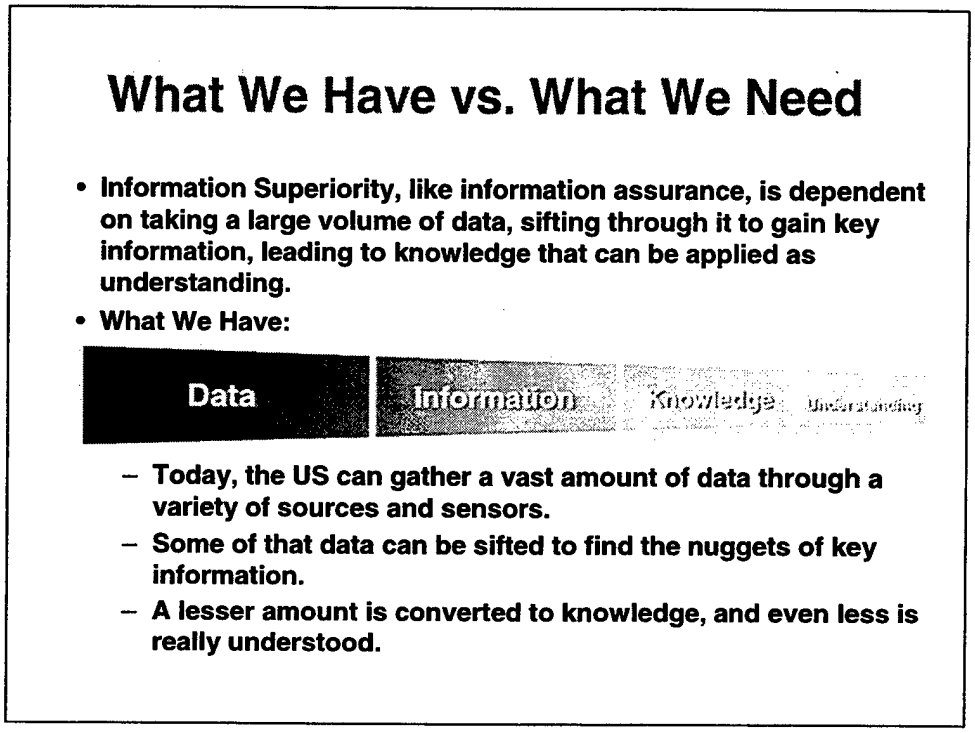
The variety of available and soon-to-be available tools and technologies that support this effort is staggering. Visualization, analysis, and security tools are the centerpiece of the technologies that will enable this transition from data to understanding. Specific categories worthy of investigation include:

- Visualization Tools:
  - Data mining
  - Data warehousing
  - Pattern recognition
  - Profile search agents
- Analysis Tools:
  - Modeling & Simulation
  - Automated data analysis

Page 1199 of 3957

- Security Tools:
  - Intrusion detection
  - Key control
  - Data filtering

The enclosed slides, developed in support of the 1999 Defense Science Board Summer Study, provide further clarification of these critical areas, and the critical transition from data to understanding.



Page 1200 of 3957

What We Have vs. What We Need

What We Need: A More Balanced Approach...

Data	Information	Knowledge	Understanding

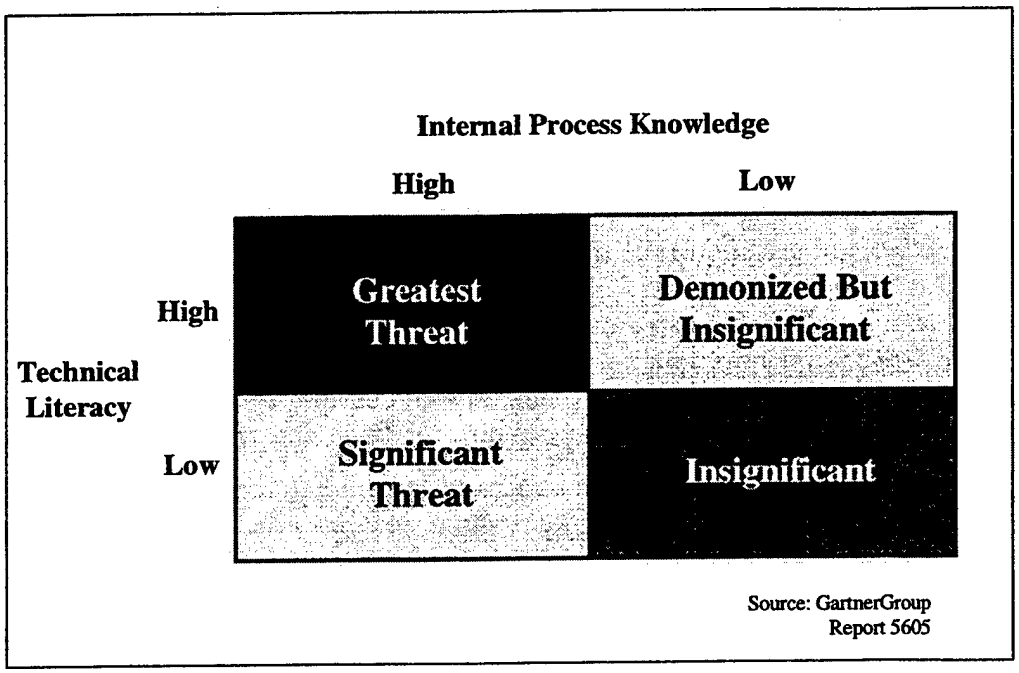
- Decreased dependence on data.
- Increased ability to identify key information.
- Larger degree of knowledge based on key information
- Clear understanding of the information picture in order to gain and maintain Information Superiority.

TAB G-3

THE INSIDER THREAT & THE LOW AND SLOW ATTACK

The threat to U.S. information systems is becoming more and more prevalent as state sponsored terrorists, nation states, and organized crime groups enter the world of cyber warfare. Perhaps the most dangerous threat, however, is the insider and the low and slow attack.

The GartnerGroup published a report in October, 1999, entitled "Information Security Hits the Front Page: How Safe is Safe Enough?" One of the central themes of that report was the danger and likelihood of the insider threat. The following graphic, extracted from the report, demonstrates their conclusions:



The key is as follows:

1) A person with low technical literacy and low internal knowledge is an insignificant threat (bottom right box).
2) A person with high technical literacy and low internal knowledge can be a bother (demonized) but is insignificant (top right box).
3) However, a person with low technical literacy and high internal knowledge (the "dumb" insider) is a significant threat (bottom left box).

Page 1202 of 3957

4) Finally, a person with high technical literacy and high internal knowledge (the "smart" insider) is the greatest threat (top left box).

DoD released the "Insider Threat Mitigation Report" in April, 2000, citing this threat as "real, and very significant." The report cites four basic sources of insider security problems:

- Maliciousness
- Disdain of security practices
- Carelessness
- Ignorance

The report further states that the majority of insiders "are hardworking and dedicated to their professions" and "understand the importance of their work to the nation." The greatest concern, however, is the significant damage a single "malicious" insider could cause. The report continues by stating, "The insider has the capability to disrupt interconnected DOD information systems, to deny the use of information systems and data to other insiders, and to remove, alter or destroy information. Consequently, the insider who betrays the authorities, trust and privileges granted to them may be aided in their malicious activity by the very information systems upon which the department depends."

The report also addresses the Defense Department's heavy reliance on commercial off-the-shelf information systems, adding to the complexities in detecting and dealing with insider threats. The report contends that DoD "has little or no knowledge of who developed the systems and, therefore, no measure of the trustworthiness, reliabilities or loyalties of those individuals". The report acknowledges that individual developers of COTS products "would have an extraordinarily difficult task to target a particular customer because COTS products tend to be produced in large quantities and shipped to customers as an activity that is independent of the individual developer. However, the potential for accepting an error-filled COTS system is real, and demonstrates that "cyber-outsiders can quickly attain many characteristics of an insider".

When this type of infrastructure is attacked from the inside, the results can be catastrophic. The knowledgeable insider has the know-how and the access to delete, modify, or transfer critical data, and may be capable of affecting hardware capabilities through inside attack as well. Add the potential for the low and slow attack, and most network security systems are not capable of detecting unauthorized activity. The low and slow attack is an instance where the attacker uses low visibility access and may not expect or require results for an extended period of time. Data transfers or modifications may be time delayed until the time of the attacker's choosing, or trap doors and trojan horses may be installed for subsequent execution.

The problem is further complicated by the frequent focus toward a perimeter defense mentality to keep out unwanted outsiders, based on the well-published concerns about outside hacker attacks and cyber-terrorism. The real issue is the fact that all of those technological safeguards designed to keep hostile computer attacks out won't help with the disgruntled insider.

Government (GAO) statistics indicate that the average cost of an outside hacking incident was $57,000, while the average cost for a serious insider hacking incident was $2.7 million. This discrepancy merits serious attention if DoD is to have any hope of securing its networks.

Page 1203 of 3957

TAB G-4

"THE CYBER OPERATIONS READINESS TRIAD (CORT)"
VULNERABILITY ASSESSMENTS (VA)
VULNERABILITY EVALUATIONS (VE)
RED TEAMING (RT)

BACKGROUND:

Recently, ASD(C3I) has asked where the Discover Vulnerabilities (DV) process and IO Red Teaming fits into the larger picture of DoD "force readiness protection" and Defensive Information Operations (DIO). ASD(C3I) has also asked the question; "Does DoD actually have a standing DIO Red Team? The answer to that question is yes. NSA is DoD's Red Team, and is the team of choice to do adversarial Red Teaming within DoD. The larger issue of a total look at cyber force readiness as well as Red Teaming is a timely one as the DV process begins to take shape in DoD. Questions like, where does DV belongs in DoD; who is the lead organization; who leads overall technical training of the force; how do we measure readiness; what are the standards/metrics for Readiness; and the question of Defense contractors assisting in meeting the extensive tasking are of importance.

PURPOSE:

This white paper will describe:

- The existing discover vulnerability (DV) process within NSA, recommendations for potential modification to the process, and a possible win-win solution to current operations with regard to the use of the civilian contracting community.
- The IO Red Team process, it's role in force readiness protection and Defensive Information Operations (DIO) and what Red Teaming could evolve to based on NSA's experiences from Eligible Receiver (ER) and the 40+ exercises conducted since then.

DISCUSSION:

NSA and the Services.

The NSA Red Team, as part of NSA's Information Systems Security Organization's (ISSO) mission, is to improve the Operational Readiness (OR) & Defensive Information Operations (DIO) posture of DoD and it's components. The NSA Red Team is an interdisciplinary and sophisticated "opposing force" (OPFOR) that utilizes active and passive, as well as technical and non-technical capabilities to expose and exploit customer IO vulnerabilities in order to improve

Page 1204 of 3957

operational readiness. Based on Red Team findings, timely feedback is provided directly to the customer consisting of their vulnerabilities as well as specific recommendations and countermeasures to thwart potential real-world exploitation of their computer and network systems.

Organizations "stressed" by NSA's Red Team operations gain a sense of their general cyber readiness by measuring effectiveness in protection, detection, response, and reconstitution during Red Team exercises. Upon customer request and negotiated between the customer and the NSA Red Team (also incorporated into the "Rules of Engagement" (ROE)), the NSA Red Team may use cooperative partners & alliances to work as a true OPFOR covering more than one pillar of IO. In the past, the NSA Red Team has partnered with other internal NSA organizations, as well as CIA, DIA, JTF/CND, NIPC, DHS, AFIWC, LIWA, FIWC, SOCOM, and the Military Services.

It is an over statement to say that the readiness posture of individual DoD organizations varies widely across the Department. Some of the component organizations within the CINCs, Services, or Agencies maintain highly effective DIO programs, while others place less emphasis on securing of their networks. Reasons vary for this dilemma, but are telling. For the Services, the total number of people who are highly skilled at discovering and exploiting vulnerabilities remains small, and their time and efforts must be managed wisely. Further, the quantities of such persons are uneven across the Services. For this reason, the Services play up to their strengths, offering a range of assessment services that maximizes their skill usage. The bottom line for the Services is that they cannot yet muster the critical mass of personnel skilled in the area of DV. The CINC's are not in much better shape, as they draw on the Military Services for their technical manpower. Currently, NSA is the only DoD entity that has the ability to focus full-time on computer **and** network vulnerability discovery at all levels of the process. It is NSA's view that it should be designated as DoD's EA for Discovering Vulnerabilities (DV). We have the talent and know-how to organize DoD in the DV process. However, it is also our view that the DV process requires refocus and a relook on where DoD needs to concentrate limited.

THE PROCESS:

We see the DV methodology as a cyclic process composed of 3-levels of service surrounded by OPSEC. The process is called "THE CYBER OPERATIONS READINESS TRIAD (CORT), and it's main goal is to improve the cyber security of DoD. The initial level, called a *Vulnerability Assessment or Infosec Assessment*, provides a high-level review of a customer's automated information system (AIS) security policies, plans, and procedures to determine if a minimal level of protection is in place. This is what is known as a Level 1 assessment. No legal authority is required to conduct this assessment. These people are responsible to support DoD and DoD/NII-associated partners. Due to increased customer request for this service, and working with the National Institute of Standards (NIST) and the DIAP, we have initiated the Information Security System Capabilities Maturity Model (ISS-CMM) process. This process invites the Defense contracting community to become "authorized", via a validated training program, to conduct Level 1 assessments to the same level as NSA. The only difference in the end result is the customer and Contractor negotiate a price for the assessment conducted. For this level of assessment, the contracting community is technically suited to conduct level 1 assessments and is a workable solution to PDD-63 customer concern over DoD evaluators in

their systems. The second level of assessment (Level II) is called a *Security or Vulnerability Evaluation.* This process looks past the basics and provides an in-depth technical analysis of a customer's information system(s). The objective is to identify *any and all* vulnerabilities (not just those associated with a specific threat agent) and assist the customer organization in addressing them. This type of DV evaluation requires NSA general counsel (AGC(I)) and DDI approval to touch a DoD customers networks or computer systems. In order for final approval, the customer must meet certain criteria and standards when requesting NSA to actually "touch" the network. This is an extremely technical operation and requires a certain skill-set to complete the task. Heretofore, NSA has been the only DoD element to conduct this in depth testing on a system or network. It is our experience that the Military Service elements conduct varying degrees of Level 1 and Vulnerability Evaluations and each conducts these services to a component with their own set of standards. *IO Red Teaming* is the third (Level III) and final level of service. It is *normally* reserved for larger DoD elements and other customers who are looking to test their networks and cyber security in an exercise environment, either as a no-notice Red Team-only evolution or as part of a larger exercise; e.g., the Marine exercise URBAN WARRIOR. SECDEF approval is required to conduct these operations and due to the complexity and technical nature of Red Teaming operations, NSA remain the only operative element to conduct this type of Red Teaming. Further dialogue is required to come to closure on where the Military Services and the Defense Contracting community play in the Vulnerability Evaluation (Level II) process and Red Teaming and what standards/metrics are required.

Once Red Teaming is performed on a system and/or network(s), the customer would optimally reevaluate where they are in their respective security environment and then via the Vulnerability Assessment Vulnerability Evaluation, or Red Teaming process, relook at what is required to secure their networks. This continuous process is a strong and proven force in "raising the bar for readiness" on computer and network security. It is this paradigm under which the NSA DV process operates, and that we believe should be required within all DoD Components.

DEFINITION:

A Red Team, as defined in the draft of DoD Directive 3600.3 "DoD Information Operations Red Teaming" is:

> *"An independent, threat-based, and simulated opposition force that uses passive, active, technical, and non-technical capabilities on a formal, time-bounded basis to expose and exploit information system vulnerabilities of friendly forces."*

The directive further states that:

> *"The goal of Red Teaming is to improve the readiness and defensive IO posture of DoD Components."*

In general, a large portion of the Defense community concurs with the DV process, however, there remains many entities throughout the Department, other government agencies, and the private sector who do not subscribe to, define as, or conform to conducting vulnerability discovery in this manner. It is our sense that the DV process be standardized across the board.

Page 1206 of 3957

Should NSA be given the EA responsibility for DV in general, it is our view that we would further refine and adjust the process for use in DoD.

THE PRIVATE SECTOR:

The DV process covers three levels of service. We believe the private sector can play a pivotal role in filling the Departments needs in the DV process where we (NSA, DoD Services, Agencies, etc) are over tasked and lacking, in some areas, skilled personnel. It is our sense that the VA and VE process, where appropriate, can be assisted by the Defense contracting community if trained and certified appropriately. Although a relatively new endeavor, the ISS-CMM for the VA process is proving a workable alternative. Equally, we believe if structured properly, and a system set up to assure the results are equal to the existing VE process, that private sector could assist in that part of the DV process, as well. However, NSA has not yet initiated an effort to begin the training and certification process for vulnerability evaluation (level II) work. If tasked, the strategy is to slowly build-up competencies for Level I assessments within Industry, and then grow additional expertise from there. Our vision is to ultimately *share* with the private sector requirements for Level II evaluations. (I deleted the last sentence)

With regard to Red Teaming, we believe there should be measured involvement by the Defense Contracting community. Contractors are involved in Red Teaming now, however, only as working under NSA authorities. There may come a time, because of the growing concern over cyberattack that we reevaluate contractor play across the board as it applies to Red Teaming. The Red Team is an opposing force. We "attack" U.S. systems. We succeed at breaking into U.S. systems. We have a very elaborate structure in place to handle our mission and/or if our mission goes awry. We have a trusted agent network, deconfliction process, classified tools and techniques, access to real world threat and resource information, sophisticated laboratory testing procedures, cover program, legal authorities and most importantly, a dedicated cadre and critical mass of career personnel with TS/SCI clearances. It also should be stated that we are creating lasting relationships & liaisons with other military departments, Agencies, and others that would simply be extremely difficult for private industry to emulate. Lastly, the "trust and ethical" issues would be most acute. We do not believe that system owners of the most sensitive DoD networks (SIPRNET, JWICS, etc) would feel comfortable with private industry performing the DoD's most sensitive vulnerability evaluations without a DoD cover or operational authority. Since this service is performed at the local as well as the "remoted" level, we envision huge conflicts with private industry performing such services, since they do not have the legal authority to use "jump-points" throughout DoD networks and Agencies.

Exercise planning for Red teaming in the outyears:

Fiscal Year		FY-00	FY-01	FY-02	FY-03	FY-04	FY-05	FY-06	FY07
Major Exercises(CINC-level)		4	8	10	12	14	14	14	14
Minor Exercises		4	6	8	10	10	10	10	10

CONCLUSION:

IO capabilities of DoD's adversaries are growing and becoming more sophisticated. These adversaries include hackers and other unstructured groups intent on supporting political objectives, and structured groups such as terrorists, rogue nations, or nation states. In addition, the strategies of our adversaries are becoming increasingly clever, drawing from across the spectrum of IO techniques. With the growing number of hacking groups and the ease with which a terrorist group or nation state can obtain the tools necessary to conduct an IO campaign, the threat is harder to identify and stop without proper training and readiness. It is essential that the United States have the capability and experience necessary to counter such threats. Issues such as Solar Sunrise, which almost stopped a US troop deployment, the I Love You Virus, as well as the well publicized intrusion called Moonlight Maze, highlight just some of the growing threats. Red Teams and the DV process can "hone" the DoD's DIO capability and provide the experience required to enhance the security awareness and readiness posture; necessary elements to dominate in conflicts where IO represents a strategic advantage.

TERMS OF REFERENCE

THE UNDER SECRETARY OF DEFENSE

3010 DEFENSE PENTAGON
WASHINGTON, DC 20301-3010

ACQUISITION AND
TECHNOLOGY

FEB 29 2000

MEMORANDUM FOR CHAIRMAN, DEFENSE SCIENCE BOARD

SUBJECT: Terms of Reference -- Defense Science Board Task Force on Defensive Information Operations

You are requested to form a Defense Science Board (DSB) Task Force to review and evaluate DoD's ability to provide information assurance to carry out Joint Vision 2010 in the face of information warfare attack.

Tasks to be accomplished:

Using the "1996 DSB report on Information Warfare – Defense" as the departure point, address the following:

- What is the status of action on the recommendations?
- Where there are shortfalls, what are the barriers to action and what should be done?
- What important aspects did the 1996 Task Force miss that should have been addressed?
- Assess the recommendations of other important reports that have addressed information assurance issues.

The Defensive Information Operations Task Force will determine:

- Adequacy of the process toward the information assurance goals needed to carry out Joint Vision 2010.
- Adequacy of the Department's readiness to project and sustain power in the face of information warfare attacks.
- The appropriate role(s) and capability of DoD to provide information assurance in support of Homeland Defense and in support of Critical Infrastructure Protection.
- Recommendations for research and development which are uniquely in DoD's interest, and thus not likely to be accomplished by the private sector in the time required to meet DoD's Defensive Information Operations objectives.
- Areas in which DoD should seek strong partnering relationships outside DoD, such as with the Critical Infrastructure Assurance Office (CIAO).
- The Task Force should provide an interim report by June 30, 2000 and the final report around October 2000.

The study will be co-sponsored by the Under Secretary of Defense (Acquisition, Technology and Logistics) and Assistant Secretary of Defense for C3I. Mr. Larry Wright will serve as the Task Force Chairman; Col Gregory Frick will serve as the Executive Secretary; and Maj Tony Yang, USAF, will serve as the Defense Science Board Secretariat Representative.

The Task Force will be operated in accordance with the provisions of P.L. 92-463, the "Federal Advisory Committee Act," and DoD Directive 5104.5, "DoD Federal Advisory Committee Management Program." It is not anticipated that this Task Force will need to go into any "particular matters" within the meaning of Section 208 of Title 18, United States Code, nor will it cause any member to be placed in the position of acting as a procurement official.

FOREIGN INFLUENCE

(U//FOUO) China: Municipal Government Publishing Anti-US, Pro-China Social Media Content With Limited Reach

(U//FOUO) ***Scope Note:*** *DHS has attributed a cluster of inauthentic Twitter accounts to a municipal government entity in the People's Republic of China. At least some of the accounts are part of a larger unattributed network of social media accounts that promotes Beijing's interests, called DRAGONBRIDGE. Our attribution of these accounts to the municipal government could yield continuing insight into People's Republic of China social media messaging operations; this analysis provides a framework for identifying and attributing other PRC clusters, which may grant greater insight into the command and control structures of PRC social media messaging operations.*

(U//FOUO) **A People's Republic of China (PRC) municipal government-controlled media outlet is very likely directing a cluster of English-language, coordinated inauthentic Twitter accounts that posted content denigrating the United States *(see graphics).*** The cluster of accounts, which we have dubbed SPICYPANDA, has been active from at least January 2021 and has published sophisticated content, but it failed to grow a follower base thus far. DHS attributed SPICYPANDA to the municipal media entity Chongqing International Communications Center (CICC) based on its leadership's creation of SPICYPANDA's anti-US messaging campaign, its overt ties to a website promoted by the accounts, and its Western social media messaging accolades and capabilities.

- *(U//FOUO)* From August 2021 through February 2022, SPICYPANDA carried out a messaging campaign created by the CICC Editor-in-Chief of Overseas Social Media, judging from a professional biography and a review of the identified accounts. This messaging campaign offered pro-PRC and anti-US commentary on current events by portraying the United States as a global antagonist, especially relating to the US Intelligence Community's investigation of the origins of COVID-19, the US withdrawal from Afghanistan, the Summit for Democracy, and the 2022 Beijing Winter Olympics *(see graphic 2)*.
- *(U//FOUO)* SPICYPANDA also aggressively amplified a Twitter account overtly operated by CICC for the Chongqing municipal government, judging from a DHS

Page 1223 of 3957

review of the accounts. This account, and an associated website called iChongqing, presents news about Chongqing and resources for individuals looking to visit, study, or invest in the city. The website is overseen by the Chongqing Municipal Party Committee's Propaganda Department, according to a Chinese-language newspaper article about the website's launch.

- *(U//FOUO)* In addition to its relationship with the Chongqing local government, CICC was tasked in 2018 by the Chinese Communist Party (CCP) with influencing overseas audiences on behalf of the city, and it received an award in 2020 for the quality of its overseas communications, judging from Chinese state media reporting and numerous Chinese language job postings. In February 2021, CICC further committed to using Western social media accounts by seeking to hire staff to operate them, according to a Chinese language news article and job postings.

(U//FOUO) **Overview of DRAGONBRIDGE and its Narratives**

(U//FOUO) Some of the identified inauthentic Twitter accounts are part of both the SPICYPANDA cluster and a larger network known as DRAGONBRIDGE. DRAGONBRIDGE has been tracked for the past three years by private sector researchers, but it has not been previously attributed—in whole or in part—to a specific person or group.

(U//FOUO) DRAGONBRIDGE (also known as SPAMOUFLAGE DRAGON) is a large network of social media accounts first observed on Facebook, Twitter, and YouTube in 2019 criticizing pro-democracy protests in Hong Kong. Since then, accounts in the network have been observed posting in seven languages on 20 social media platforms and on over 40 other websites. The network is comprised of many clusters of co-managed accounts that seemingly operate independently of each other, judging from two private sector analytic reports on the network and a DHS review of identified and suspected accounts. DRAGONBRIDGE has employed at least 100,000 accounts in its history on a single social media platform, according to the identified platform, and we assume it has employed similar numbers of accounts on other major platforms. Despite the size of the network, it rarely engages with authentic social media users; however, it has had some limited success in reaching individuals recently.

(U) Since 2019, DRAGONBRIDGE has posted content regarding Hong Kong, COVID-19, the US withdrawal from Afghanistan, Taiwan, the 2022 Beijing Olympics, rare earth mineral mining companies, the 2022 US midterm election, and many other topics. Content promoted by the network is consistently aligned with Beijing's interests.

(U//FOUO) **The reach of SPICYPANDA's content likely was limited by its narrow focus on PRC-related issues, obvious indications of inauthenticity, and ongoing enforcement mechanisms. However, DHS's attribution of the accounts could yield greater insight into PRC adjustments and improvements in future social media campaigns.** SPICYPANDA illustrates the PRC's ability to publish commentary on current events through sophisticated content, including videos, memes, and topical political cartoons, which may reach more Americans if the PRC overcomes the obstacles that constrained SPICYPANDA's reach.

- *(U//FOUO)* Content proliferated by SPICYPANDA primarily focused on themes of political importance to the PRC, which may interest few US social media users. Individual accounts lacked convincing personas, and content intended to attract views was infrequent and insufficient to entice people to actively follow the accounts, judging from a review of identified accounts.
- *(U//FOUO)* Clear indications of the accounts' inauthenticity may have also reduced the reach of SPICYPANDA, as we assume authentic users generally seek to avoid inauthentic accounts and indications of inauthenticity enabled the removal of the accounts. Twitter[USPER] sporadically removed accounts in the network and removed over 800 accounts for rules violations in February 2022 following two Western newspapers' identification of the accounts as inauthentic; at least three dozen remain. While the DRAGONBRIDGE network has rebounded from numerous takedowns in the past, removals prevent accounts from building large follower bases.
- *(U//FOUO)* Despite using relatively unsophisticated accounts, SPICYPANDA published timely and highly sophisticated content, including dozens of original political cartoons, graphics, memes, and videos, judging from a review of identified accounts. These posts often responded to trending news topics within days and leveraged popular, and sometimes divisive, figures to press their narratives. SPICYPANDA responded more dynamically to emerging events than other pro-PRC inauthentic networks, judging from open-source reporting and a DHS review of the accounts.

INTELLIGENCE IN FOCUS

27 APRIL 2023

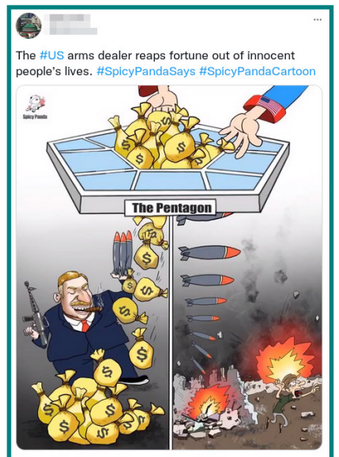
(U//FOUO) Timeline of Select SPICYPANDA Narratives From August 2021 Through February 2022

(*U//FOUO*) SPICYPANDA engaged in three distinct messaging campaigns on Twitter between January 2021 and the present, judging from a review of the identified accounts. From July 2021 through a partial takedown at the end of February 2022, the accounts published commentary on current events that aligned with Beijing's interests, with a particular focus on denigrating the United States (depicted below). From August 2021 through a partial takedown in February 2022, the accounts promoted content extolling the PRC's achievements in technology, infrastructure, and environmentalism. Finally, from at least January 2021 through the present, including after the takedown of most accounts, SPICYPANDA published content praising the city of Chongqing.

OVERALL GRAPHIC 2 CLASSIFICATION: UNCLASSIFIED//FOR OFFICIAL USE ONLY

EXAMPLE TWEETS



PRECIPITATING EVENTS

27 Aug: US Government COVID Origin Investigation Concludes

30 Aug: US Withdrawal From Afghanistan

9–10 Dec: US-Hosted Summit For Democracy

4–20 Feb: Beijing Olympics

AUGUST 2021	SEPTEMBER 2021	OCTOBER 2021	NOVEMBER 2021	DECEMBER 2021	JANUARY 2022	FEBRUARY 2022

MAJOR NARRATIVES

SPICYPANDA suggested COVID-19 originated in a biolab in the United States and that the US Intelligence Community's investigation into its origin was a ploy to denigrate China.

SPICYPANDA portrayed the United States as a global antagonist that profited from the conflict at the expense of the Afghan people. Criticism of the US military continued through November.

SPICYPANDA argued that the US system of democracy is unjust and inferior to China's system of government. The accounts also extolled the Hong Kong elections.

SPICYPANDA almost exclusively promoted the 2022 Beijing Olympics during the event. The accounts also criticized the US diplomatic boycott.

PARTIAL TAKEDOWN
Over 800 accounts removed for violating Twitter's rules.

Source, Reference, and Dissemination Information	
Privacy, Civil Rights, Civil Liberties, Intelligence Oversight Notice	*(U//FOUO)* US persons linking, citing, quoting, or voicing the same arguments raised by these foreign influence activities likely are engaging in First Amendment-protected activity, unless they are acting at the direction or control of a foreign threat actor. Furthermore, variants of the topics covered in this product, even those that include divisive terms, should not be assumed to reflect foreign influence or malign activity absent information specifically attributing the content to malign foreign actors. This information should be considered in the context of all applicable legal and policy authorities to use open-source information while protecting privacy, civil rights, and civil liberties.
Definitions	*(U//FOUO)* **Co-Managed Accounts:** Accounts that are operated by the same person or entity. *(U//FOUO)* **Coordinated Inauthentic Behavior:** An evolving and varied term used by social media platforms to describe a form of online manipulation that relies on multiple fake accounts—either assumed or fabricated—acting together to achieve a strategic goal. This activity can include creating false or divisive narratives, building false audiences, and amplifying existing narratives or conspiracy theories. It can also include the use of artificial intelligence tools, including bots, to create authentic-looking fake users and increase content dissemination and interaction. These methods vary by platform. *(U//FOUO)* **Coordinated Inauthentic Account:** An account that is co-managed with others and engaged in coordinated inauthentic behavior (see above). *(U//FOUO)* **Foreign Influence**: Any covert, fraudulent, deceptive, or unlawful activity of foreign governments—or persons acting on their behalf—undertaken with the purpose or effect of influencing, undermining confidence in, or adversely affecting US democratic processes or institutions or otherwise affecting sociopolitical sentiment or public discourse to achieve malign objectives. • *(U//FOUO)* **Covert Influence:** Activities in which a foreign government hides its involvement, including the use of agents of influence, covert media relationships, cyber influence activities, front organizations, organized crime groups, or clandestine funds for political action. • *(U//FOUO)* **Overt Influence:** Activities that a foreign government conducts openly or has clear ties to, including the use of strategic communications, public diplomacy, financial support, and some forms of propaganda. *(U//FOUO)* **Network:** In this product, "network" always refers to the DRAGONBRIDGE network of accounts. See text box, "Overview of DRAGONBRIDGE and its Narratives" for more details on DRAGONBRIDGE/SPAMOUFLAGE DRAGON. *(U//FOUO)* **Cluster:** In this product, "cluster" always refers collectively to the co-managed accounts operated by CICC. These accounts make up a subset of the accounts that make up the DRAGONBRIDGE network.
Reporting Suspicious Activity	*(U)* **To report suspicious activity, law enforcement, Fire-EMS, private security personnel, and emergency managers should follow established protocols; all other personnel should call 911 or contact local law enforcement.** Suspicious activity reports (SARs) will be forwarded to the appropriate fusion center and FBI Joint Terrorism Task Force for further action. For more information on the Nationwide SAR Initiative, visit www.dhs.gov/nsi. *(U)* **To report a computer security incident, either contact US-CERT at 888-282-0870, or go to https://forms.us-cert.gov/report/ and complete the US-CERT Incident Reporting System form.** The US-CERT Incident Reporting System provides a secure, web-enabled

	means of reporting computer security incidents to US-CERT. An incident is defined as a violation or imminent threat of violation of computer security policies, acceptable use policies, or standard computer security practices. In general, types of activity commonly recognized as violating typical security policies include attempts (either failed or successful) to gain unauthorized access to a system or its data, including personally identifiable information; unwanted disruption or denial of service; the unauthorized use of a system for processing or storing data; and changes to system hardware, firmware, or software without the owner's knowledge, instruction, or consent. *(U)* To report a similar incident to the Intelligence Community, please contact your DHS I&A Regional Intelligence officer at your state or major urban area fusion center, or e-mail DHS.INTEL.ORI.HQ@hq.dhs.gov. DHS I&A Regional Intelligence officers are forward deployed to every US state and territory and support state, local, tribal, territorial, and private sector partners in their intelligence needs; they ensure any threats, incidents, or suspicious activity is reported to the Intelligence Community for operational awareness and analytic consumption.
Dissemination	*(U)* Authorized audiences, such as private sector partners, federal officials, governors, lieutenant governors, secretaries of state, homeland security advisors, and fusion center directors and their staff.
Warning Notices & Handling Caveats	*(U)* **Warning:** This document is UNCLASSIFIED//FOR OFFICIAL USE ONLY (U//FOUO). It contains information that may be exempt from public release under the Freedom of Information Act (5U.S.C. 552). It is to be controlled, stored, handled, transmitted, distributed, and disposed of in accordance with DHS policy relating to FOUO information and is not to be released to the public, the media, or other personnel who do not have a valid need to know without prior approval of an authorized DHS official. State and local homeland security officials may share this document with authorized critical infrastructure and key resource personnel and private sector security officials without further approval from DHS.

2019
PUBLIC-PRIVATE
ANALYTIC EXCHANGE PROGRAM

Combatting Targeted Disinformation Campaigns

A whole-of-society issue

October 2019

ACKNOWLEDGMENTS

We would first like to thank the Office of the Director of National Intelligence and the Department of Homeland Security for their thoughtful support throughout the duration of the program.

We are also very thankful for the unique insights we received from contacts and interviewees who contributed their time and information to this report by educating our group on the many aspects of how disinformation campaigns are conducted, the technologies involved, and the legal, regulatory, and policy landscape that affects how we confront this issue. The suggestions on further areas for exploration identified through our conversations have also helped considerably in the shaping of this paper, and where we would like our future research endeavors to go.

The people stepping up to help provide information for this project included private industry experts from technology and social media companies, university and think tank scholars and researchers, and state and federal agencies. We would like to acknowledge all the Team Members and Champion listed below for their contributions to this project and this report. This report would not have been possible without the diverse public and private sector makeup of this team and their legal, technical, academic, and policy expertise.

EXECUTIVE SUMMARY

In today's information environment, the way consumers view facts, define truth, and categorize various types of information does not adhere to traditional rules. The shift from print sources of information to online sources and the rise of social media have had a profound impact on how consumers access, process, and share information. These changes have made it easier for threat actors to spread disinformation and exploit the modern information environment, posing a significant threat to democratic societies. Accordingly, disinformation campaigns should be viewed as a whole-of-society problem requiring action by government stakeholders, commercial entities, media organizations, and other segments of civil society.

Combatting the Issue
Response Framework
Conclusion

Before the 2016 U.S. presidential election, disinformation was not at the forefront of American discourse. U.S. government efforts in the disinformation arena had focused primarily on combatting transnational terrorist organizations. Social media companies were just becoming aware how their platforms empowered threat actors on a large scale. Mainstream media organizations were not yet plagued by accusations of spreading "fake news" and fears of concerted foreign efforts to undermine American society had not seeped into the consciousness of the general public.

Since the presidential election, disinformation campaigns have been the subject of numerous investigations, research projects, policy forums, congressional hearings and news reports. The end result has been a better understanding of the methods and motives of threat actors engaging in disinformation campaigns and the impact of these campaigns, which in turn has led to improved efforts to combat these campaigns and minimize the harm they cause.

Until the end of 2018, much of the work on disinformation campaigns was post-mortem—after the campaign had nearly run its course. At that point, the desired effect of the threat actor had been achieved and the damage done. Since late 2018, civil society groups, scholars, and investigative journalists have made great strides in identifying ongoing disinformation campaigns and sharing findings with social media platforms, who then remove inauthentic accounts. However, these campaigns are often identified after the disinformation has already entered and been amplified inside the information environment, too late to fully negate the harm.

The extent of private and public sector cooperation over the next five years to address targeted disinformation campaigns will determine the direction of the issue. We view this issue as a whole-of-society problem requiring a whole-of-society response. The purpose of this paper is to provide a framework for stakeholders to understand the lifecycle of disinformation campaigns, then to recommend a preliminary set of actions that may assist with the identification and neutralization of a disinformation campaign before disinformation is amplified within the information environment, thus mitigating its impact.

The framework recommends actions for a variety of stakeholders to combat targeted disinformation campaigns by neutralizing threat actors, bolstering social media technology to make it less susceptible to exploitation, and building public resilience in the face of disinformation.

We recommend:

- Support for government legislation promoting transparency and authenticity of online political content. We support passage of the Honest Ads Act, which would hold digital political advertising to the same disclosure requirements as those required for political advertisements on television, radio and print media.
- Funding and support of research efforts that bridge the commercial and academic sectors. Academic research efforts, armed with the appropriate real-world data from commercial platforms, could more effectively explore the trends and methodologies of targeted disinformation campaigns. This research could also help to better identify segments of the population most susceptible to disinformation campaigns and guide resources for media literacy efforts. This research should also include the development of technical tools to analyze disinformation across platforms and identify inauthentic content such as deep fakes.
- Establishment of an information sharing and analysis organization to bring together government entities, research institutions and private-sector platforms. The organization could facilitate information exchange through a trusted third-party. The organization could serve as an information center that would pool expertise and track disinformation trends and methods.
- Encouragement of media organizations to promote the need for healthy skepticism by their users when consuming online content. This includes providing media literacy resources to users and enhancing the transparency of content distributors.
- Expansion of media literacy programs to build societal resilience in the face of disinformation campaigns. Media literacy could be framed as a patriotic choice in defense of democracy. Public education through advocacy groups like AARP, which can tailor the message of media literacy for their members, could be an effective means of encouraging the adoption of healthy skepticism towards online information.

Scope

This paper was produced by the Combatting Targeted Disinformation Campaigns team, operating under the auspices of the Department of Homeland Security's Analyst Exchange Program. The paper was developed based on open source research and interviews with identified subject matter experts. All judgments and assessments are based soley on unclassified sources and are the product of joint public and U.S. government efforts and do not necessarily represent the judgments and assessments of the team members' employers.

DISINFORMATION OVERVIEW

Disinformation is not synonymous with false information or "fake news." False information that is shared with others without the intent to mislead can be defined as misinformation. People share misinformation because they believe the information is true when, in fact, it is not.

On the other hand, the purpose of disinformation is to mislead. Disinformation is information created and distributed with the express purpose of causing harm.[1] Disinformation is not necessarily false information. Even true information can be presented in misleading ways and thus form the grist of a targeted disinformation campaign.

A targeted disinformation campaign, in the context of this paper, is more insidious than simply telling lies on the internet. One untrue meme or contrived story may be a single thread in a broader operation seeking to influence a target population through methods that violate democratic values, societal norms and, in some jurisdictions, the law.

A disinformation campaign occurs when a person, group of people, or entity (a "threat actor") coordinate to distribute false or misleading information while concealing the true objectives of the campaign. The objectives of disinformation campaigns can be broad (e.g., sowing discord in a population) or targeted (e.g., propagating a counternarrative to domestic protests) and may employ all information types (disinformation, misinformation, malinformation, propaganda, and true information). The target of a disinformation campaign is the person or group the threat actor aims to influence in order to achieve the campaign's objective.

Information Types

Propaganda has a political connotation and is often connected to information produced by governments (the lines between advertising, publicity, and propaganda are often unclear).

Disinformation is manufactured information that is deliberately created or disseminated with the intent to cause harm.

Misinformation is false information shared without the intent to mislead.

Malinformation is genuine information, typically private or revealing, that may be distributed in a campaign to cause harm to a person s reputation in furtherance of the campaign s objective.

Inauthentic Information is *not* transparent in its origins and affiliation. The source of the information tries to mask its origin and identity.

Authentic Information is transparent in its origins and affiliation. The source of the information is unhidden.

Suspected Iranian Influence Operation Leverages Network of Inauthentic News Sites & Social Media Targeting Audiences in U.S., UK, Latin America, Middle East." FireEye Intelligence, August 21, 2018, https://www.fireeye.com/blog/threat research/2018/08/suspected iranian influence operation.html

Targeted disinformation campaigns are not a new phenomenon and sophisticated ones follow a predictable progression. After establishing the objective, a threat actor follows distinct steps, discussed later in more detail: recon, build, seed, copy, amplify, and control to bring about an outcome. But first we will explore the history and impacts of these campaigns, the information environment that facilitates modern campaigns, and the motives of disinformation threat actors.

A Brief History of Influence Operations

To understand the role of disinformation in contemporary society, it is helpful to look at examples of how national governments, non-governmental organizations, and informal groups of individuals in modern history have used influence operations to sway public opinion both domestically and internationally. In international relations, the very essence of "soft power" is the ability to influence other nations through persuasion and other non-coercive means.

Within democratic societies, public support for policy and legislative initiatives is often critical for the success of these initiatives.[2] Eroding public support for U.S. involvement in the Vietnam War, not battlefield defeats, led to the eventual U.S. withdrawal from that conflict.[3] For decades, the U.S. Department of Agriculture promoted healthy eating habits through publication and distribution of nutrition guidelines.[4] In similar fashion, U.S. Surgeon General reports linking smoking and other tobacco use with cancer and other diseases, along with mandatory warning labels and limitations on advertisements for tobacco products, has helped lead to a precipitous decline in the U.S. smoking rate since the 1940s.

Nongovernmental organizations attempt to steer public opinion on a host of issues. Methods these organizations might use include editorials in newspapers, celebrity endorsements, chain e-mails, hosting public forums, publishing reports, organizing conferences, recording podcasts, and direct mail campaigns.

On the international front, within the U.S. Department of State, a core mission of the Bureau of Global Public Affairs is promotion of international support for the "values and policies of the United States."[5] Likewise, a core mission of the Peace Corps is "to help promote a better understanding of Americans on the part of the peoples served."[6]

Other countries, whether democratic or autocratic, also attempt to influence domestic and international audiences. Israeli Prime Minister Benjamin Netanyahu endeavored to undermine international support for the Iran nuclear deal.[7] China has attempted to polish its international reputation by spending vast sums of money worldwide to promote Chinese culture and allay the concerns of other countries uneasy about Chinese economic and military ambitions.[8] France has cultural centers in 137 countries to raise awareness of French culture.[9] And Russia has attempted to portray itself as a viable alternative to the West.[10]

Shaping public opinion through licit means is a legitimate function of government. However, there are many instances when governments have used illicit means to accomplish their objectives. During the First World War, false news stories about atrocities committed by the German Army served to demonize the

enemy in the eyes of the British public.[11] In the years leading up to the Second World War, a key objective of the Nazi propaganda machine was "to absorb the individual into a mass of like-minded people, and the purpose of the 'suggestion' was not to deceive but to articulate that which the crowd already believed."[12] Soviet disinformation campaigns, so-called "active measures," were central to the Soviet Union's efforts to increase its influence throughout the world and undermine the influence of its rivals.[13] Soviet efforts to control the press of foreign countries, forge documents, and manipulate other countries' societal infrastructure, including the academic, economic, and political spheres, were hallmarks of its organized disinformation efforts.[14] During the Cold War, the Soviet KGB and East German Stasi peddled the notion that the U.S. Department of Defense genetically engineered the human immunodeficiency virus (HIV).[15]

Impact of Disinformation Campaigns

The mere fact that domestic and foreign actors are engaging in disinformation campaigns against domestic audiences, especially during election cycles, is cause for concern irrespective of the success of these campaigns. Though it is often challenging to determine the full impact of disinformation campaigns, it is possible to identify, in some cases, short-term and long-term impacts. In the short term, targeted disinformation campaigns may:

- cause and exploit emotional reactions to sensational topics, causing disinformation to spread more rapidly than legitimate news.[16]
- aggravate existing societal fissures, inflaming ideological, political, gender-based, ethnic, and religious differences.[17] This heightened state of agitation may fuel acts of harassment and violence.[18]
- increase health risks. Disinformation campaigns aimed at health issues and the provision of health care may lead to sudden changes in dietary habits, the adoption of treatments which have not been scientifically verified, and engender distrust in the advice given by medical professionals.[19,20]

- harm the reputations of individuals, governments, companies, and other organizations, even if the disinformation is later proven false. [21]
- cause panic that reverberates through financial markets and leads individuals to make unsound financial decisions. [22]

The long-term effects of disinformation campaigns are potentially serious to democratic societies. While there is no sure-fire method to predict the outcomes of disinformation campaigns, based on the analysis of available literature and discussions with experts in the public and private sectors, there are a number of possible outcomes. In the long term, disinformation campaigns may:

- manipulate and further radicalize domestic audiences through impersonating and amplifying their existing messaging.[23]
- blur the lines between authentic and inauthentic content.[24] By mimicking legitimate sources of information, actors engaging in disinformation campaigns make it more difficult for individuals to distinguish truth from fiction.
- increase distrust of all online information sources.[25] Disinformation campaigns make individuals less apt to view online news sources as credible and fact-based, potentially harming democratic outcomes since exposure to a variety of reliable information sources helps to fuel rational, informed decision-making. Absent reliable sources of information, individuals are more likely to succumb to decision-making based on emotional appeal and personal whim.[26]
- undermine trust in democracy and confidence in the ability of government institutions to solve societal problems.[27]

INFORMATION ENVIRONMENT

The Social Media Revolution

As the invention of the movable type machine in the 15th century revolutionized the way the public received and shared information, so did the invention and widespread use of social media platforms in the 21st century. Social media platforms have granted individuals the ability to create communities with other individuals who have shared views and ideologies far more easily than was possible before the emergence of these platforms.

[27] W.L. Bennett and S. Livingston, "The disinformation order: Disruptive communication and the decline of democratic institutions," *European Journal of Communication*, 2018: 33(2), pp. 122-139.

This development has had far-reaching implications. For example, in the Arab world, online social networks fostered communities of individuals who shared grievances against their governments. This virtual collaboration led to plans to rise up against these governments. The ensuing uprisings resulted in a change of government in Tunisia, Libya, Egypt, Yemen, Sudan, Iraq, and political and economic concessions from the governments in Algeria, Oman, Bahrain, Morocco, and Saudi Arabia.[28] In a very real sense, without online social networks, the Arab Spring would not have occurred.

The development of mobile technologies with messaging platforms that are wifi-enabled and cellular-enabled has led to an explosion of interconnectivity. More than five billion people are estimated to own mobile devices and more than 50% of these devices are smartphones.[29] With these new technologies, individuals and groups can rapidly share content, including disinformation. This content includes messages from individuals or groups, hyperlinks to media articles, and other web content such as images and video. However, these messaging platforms may mask the identity of the sender and thus facilitate the spread of disinformation. Information shared via these messaging platforms is generally not vetted for accuracy, which makes these platforms prime candidates for exploitation by threat actors. Furthermore, end-to-end encryption on these messaging platforms can prevent the platform host from being able to moderate the content that flows through the platform.

For example, in 2017, the spread of false information led to acts of violence in India when false information about a purported gang of child kidnappers was disseminated on WhatsApp, a mobile messaging service used by over 200 million people in India.[30] Misinformation-fueled mobs killed seven people in the Indian state of Jharkhand.[31]

How Social Media Platforms Enable Disinformation Campaigns

Since the rise of social media, threat actors, whether individuals, nation-states, or other organized groups, have exploited the information environment on an unprecedented scale. Unlike the publication and distribution of print sources, which require publishing houses, editors, proofreaders, promotional advertisements, and bookstores, online information does not require an intermediary between content creator and consumer. As public confidence in mainstream media outlets has waned, interest in social media platforms and other online forums that offer uncensored communication channels to share ideas and commentary has increased. [32]

Though these platforms typically do not require payment from users in order to establish an account or access content on the platform, they are not cost-free. In exchange for granting users free access to these platforms, platform owners gather user data that enable advertisers to tailor online advertisements to known user preferences. In this arrangement, users are spared from content they have little interest in, platform owners can study user behavior to determine how to maximize the time users spend on the platform, and advertisers can serve up content more likely to engage users.

The key to this system is the attention of users. The more alluring the content, the greater the time on the platform, and thus the greater the potential profit.[33] Therefore, social media platforms have an incentive to provide their users with an array of clickbait because doing so increases the revenue generated by selling online advertisements.[34]

By customizing user content, a platform effectively connects users with others who share similar views and interests. These platforms stoke the curiosity of users who want to discover what other users like them are wearing, watching, reading, and thinking.[35] The algorithms that determine what content will be displayed to individual users are designed to feed users more of what they *want* to know, not necessarily what they *should* know. The end result of this process is the creation of "echo chambers" where content inconsistent with a user's preferences fails to appear in his or her newsfeeds and other content-distribution channels.

The Pervasiveness of Russian Disinformation

This is why when we focus on social media effects of Russian disinfo, we completely miss the point. This is a multi dimensional, multi channel strategy, which uses different tools in complementary ways, and through which they have shaped U.S. political discourse...disinformation is often seeded at the bottom of the environment and trickles into more mainstream sites, but eventually it hits media and political influences. We cant measure the effects of disinfo through votes, but we can note where it becomes part of mainstream discourse.

Source: Kate Starbird (University of Washington), Twitter Post, July 9, 2019, 11:10 AM, https://twitter.com/katestarbird/status/1148610356895289346

For many people in the United States, social media platforms have become an important source of news. According to the Pew Research Center, in 2018, less than 38% of any segment of the U.S. population relied often on print newspapers.[36] Only 16% of Americans between the ages of 18 and 29 relied often on television news broadcasts; whereas 36% of this demographic group relied often on social media for news.[37] Overall, 68% of Americans get news on social media from time to time.[38] Forty-three percent (43%) of Americans get news on Facebook.[39]

The customization of content on social media platforms makes these platforms especially susceptible to disinformation campaigns.[40] Users can share information online easily and quickly, often doing so without verifying the accuracy of the shared information.[41] Although 79% of U.S. adults believe that steps should be taken to rein in fake news stories,[42] 23% have shared fake news, knowingly or unknowingly, with friends and other people online.[43] Because search algorithms provide results tied to prior online behavior, search

returns will likely conform to users' preexisting biases. This content will seem more credible, at least initially, than content that flies in the face of these biases.[44] The desire of users to distinguish fake news from real news is often minimal when the news is emotionally compelling.[45] In the eyes of the user, the emotional appeal of the information may outweigh an interest in its trustworthiness.

As information is shared from user to user, the cumulative impact of this sharing may seem to render this information more legitimate due to the fact that so many users have shared it.[46] In other words, "if you make it trend, you make it true."[47] Popularity trumps accuracy.

Threat actors take advantage of the design of social media platforms and how users share information to target specific users and groups with disinformation in the hope that these users will spread this disinformation throughout the information environment. The easy transference of online information between users and platforms increases the effectiveness of modern disinformation campaigns.

During the 2016 U.S. presidential election campaign, the Internet Research Agency (IRA), based in Russia, created fake social media accounts by pretending to be U.S. citizens, operated fraudulent social media pages, and formed phony online groups all designed to attract U.S. audiences. On Twitter alone, the IRA created approximately 3,000 fake accounts that posted over 10 million tweets.[48] These accounts had over 6.4 million followers and followed 3.4 million other Twitter accounts.[49]

By capitalizing on divisive U.S. political and social issues and identifying U.S. audiences vulnerable to manipulation on social media, the IRA drew the attention of users with tantalizing content and was able to insert disinformation into the information environment where it spread rapidly and eventually metastasized to other social media platforms.[50] Mainstream news outlets, which monitored social media platforms for trending topics and reported on those topics, expanded the reach of this disinformation, highlighting how the ease of information transfer facilitates the effectiveness of modern disinformation campaigns.[51]

THE MOTIVES OF THREAT ACTORS

The sheer volume of information on the internet makes any attempt to rid the internet of inaccurate information, fake news, doctored audiovisual media, disinformation, or any other undesirable content a herculean, if not impossible, task. Therefore, government and industry leaders must focus their resources on identifying and neutralizing the greatest threats. One way to assess and prioritize threats is to identify suspected disinformation threat actors through understanding the motives for their campaigns.[52]

Understanding why a piece of disinformation is directed at a specific audience will provide purchase on how to direct resources to negate the actor and mitigate the campaign.

Once one understands the motives of a threat actor, one may gain clarity on the objectives of specific disinformation campaigns, thus providing insight into how to neutralize the campaign and better predict the events and audiences who could be targeted in the future. The motives for disinformation campaigns are diverse and often mixed. Motivations can be financial (e.g., Macedonian threat actors' scheme to create ad revenue through incendiary content about a U.S. election[53]), political (e.g., push polling to plant false information in the minds of potential voters[54] or interest groups creating false social media content about an opponent to divide a voting bloc[55]), ideological (e.g., disagreement over a corporation's use of a social issue in its advertising, see Nike example below), legal/reputational (e.g., defense lawyers preventing reputational harm for a high-profile client and/or perpetrating harm against a defendant[56]), or a combination thereof.

The following two pages offer case studies of disinformation threat actors motivated by different factors — the first, a nation-state motivated to slow the economic and technological progress of its adversaries (Russian Promotion of 5G Dangers); the second, ideologically-motivated actors conducting a low-budget campaign to tarnish a major corporation (Campaign to Damage Nike Brand).

RUSSIAN PROMOTION OF 5G DANGERS

Starting in 2018, Russia has supplied foreign audiences with disinformation about the supposed health dangers of 5G cellular signals. This disinformation campaign capitalizes on anxieties about radio waves causing cancer and other bodily damage.

Russia has used its RT America network to target Americans with a series of stories and news reports about the health hazards of 5G cellular signals. Inside Russia, RT reports on the scientific consensus that 5G signals promote human health; outside Russia, it reports that 5G cellular signals are more dangerous than existing 3G and 2G signals. By relying on a number of so called experts on the topic, Russia has promoted the notion that scientific controversy surrounds the issue, even though there is consensus in the scientific community that 5G signals are safe. The resulting public concern has possibly slowed the implementation of 5G technology in the West, stymied the business plans of Russia's economic competitors, and thus given Russian companies more time to establish their own 5G networks.

CAMPAIGN TO DAMAGE NIKE BRAND

Right wing actors, unhappy about Nike's featuring of former NFL quarterback Colin Kaepernick in a 2018 advertising campaign, sought to discredit and undermine Nike's brand reputation. Kaepernick was controversial for his refusal to stand during pregame renditions of the national anthem in protest of what he saw as police brutality and systemic racism in America. After the Nike commercial aired, the disinformation threat actors created, posted, and spread fake Nike coupons featuring Kaepernick's picture and offering 75% discounts on Nike products for "people of color."

The threat actors weaponized an existing controversy to do economic harm to a corporation with whom they disagreed. They deliberately manufactured false information (the coupon) in a low budget operation to advance a narrative that Nike is overtly political, biased, and even un American. Therefore, consumers should avoid Nike products. Although the campaign, per se, may not have done lasting damage to Nike, it shows the susceptibility of public corporations to low budget actors who can create and advance false information about an existing controversy.

Misinformation vs. Disinformation: What's the difference? New Knowledge, March 7, 2019, https://www.newknowledge.com/articles/misinformation vs disinformation whats the difference/.

Attribution

Ascertaining the intent of a threat actor can be difficult if the identity of the threat actor is not known.[57] Attributing a targeted disinformation campaign to a specific threat actor is often a painstaking process.[58] Developments in technology and tactics that help mask the identity of threat actors outpace developments in technology and tactics that unmask these threat actors, especially as threat actors become more adept at exploiting authentic users.[59] The process of assessing the threat actor can be facilitated by making three preliminary determinations: (1) Is the threat actor based inside or outside the United States?; (2) Is the threat actor a nation-state, backed by a nation-state, or independent of a nation-state?; and (3) Is the purveyor of disinformation a witting or unwitting agent?

Domestic or Foreign-Based: The physical location where the disinformation originated may offer some clues as to the motives of the threat actor. A targeted disinformation campaign that originates in Mississippi whose purpose is to enflame racial tensions in the United States will have different implications than an identical campaign that originates in Tehran. Fixing the location where the disinformation originated will also help to determine which responses to the disinformation are available and which entities are best suited to respond.

State or Non-State Affiliation: State-sponsored threat actors generally have more resources available to conduct disinformation campaigns than threat actors not backed by nation-states and therefore the resources to sustain and protect these campaigns over an extended period of time. Different tools are available to respond to the actions of nation-states, as opposed to the actions of non-state actors. The former is a matter of international relations and national security; the latter may be best addressed through the criminal justice system.

Witting or Unwitting Agents: Threat actors are witting purveyors of disinformation—people or entities directly supporting a disinformation campaign and aware of the campaign's malign motives. Threat actors should be distinguished from unwitting agents, people or entities supporting a disinformation campaign while unaware of the malign motives underlying the campaign. A "useful idiot" is a type of unwitting agent who is perceived to be sympathetic to the actor's cause, but does not comprehend the objectives of the campaign. Unwitting agents often spread disinformation not knowing that he or she is participating in a disinformation campaign. Responses to the different threat actors will vary depending on their level of intentional involvement in the targeted disinformation campaign.

The Role of Bots in Disinformation Campaigns

Threat actors can amplify disinformation through the use of bot networks, social media followers, or pre-established accounts. Bots are computer algorithms designed to execute specific online tasks autonomously and repetitively.[60] They simulate the behavior of human beings in social networks, interacting with other

users and sharing information and messages.[61] Millions of bots spread information on social media platforms such as Facebook, Twitter, and Instagram. According to a 2017 estimate, there were 23 million bots on Twitter (around 8.5% of all Twitter accounts), 140 million bots on Facebook (up to 5.5% of all Facebook accounts) and approximately 27 million bots on Instagram (8.2% of all Instagram accounts).[62] These three platforms alone contained 190 million bots—more than half the number of people who live in the entire United States.[63] These zombie-like accounts often sit dormant, waiting for external activation to begin their preassigned tasks on the platform. Bot accounts are advertised and sold legally on a number of websites. See the table below for an example of publicly available plans to purchase bots.

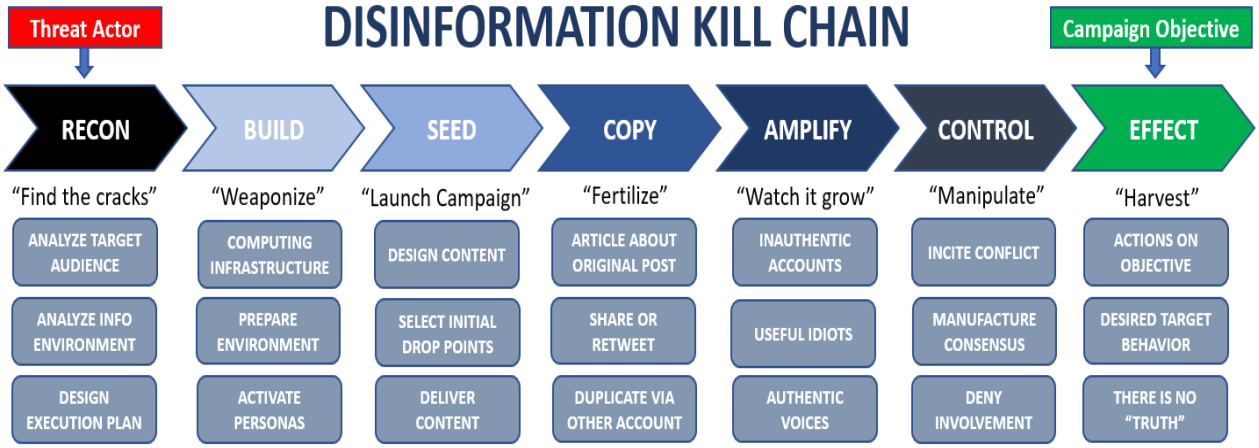
DISINFORMATION KILL CHAIN

The "connectedness" of modern society and the free availability of content distribution platforms has greatly increased the scope, scale, and speed of disinformation campaigns. Disinformation campaigns are not a new phenomenon. While the scale of attack, scope of impact, and speed of execution of modern disinformation campaigns have brought new attention to the issue, the fundamental elements of such campaigns pre-date the internet. The cyber kill chain model[64] serves as an inspiration for the following framework, which outlines the basic structure of these campaigns.

[61] "How Is Fake News Spread? Bots, People like You, Trolls, and Microtargeting," Center for Information Technology and Society, U.C. Santa Barbara, accessed September 17, 2019, https://www.cits.ucsb.edu/fake-news/spread.
[62] "How Is Fake News Spread? Bots, People like You, Trolls, and Microtargeting," Center for Information Technology and Society, U.C. Santa Barbara, accessed September 17, 2019. https://www.cits.ucsb.edu/fake-news/spread.
[63] "How Is Fake News Spread? Bots, People like You, Trolls, and Microtargeting," Center for Information Technology and Society, U.C. Santa Barbara, accessed September 17, 2019. https://www.cits.ucsb.edu/fake-news/spread.
[64] *The Cyber Kill Chain*®, Lockheed Martin, https://www.lockheedmartin.com/en-us/capabilities/cyber/cyber-kill-chain.html.



Note: A disinformation threat actor may skip steps in the kill chain process. However, doing so can reduce the effectiveness of the campaign and erode protections aimed at obfuscating the identity and objectives of the actor.

Source: The MITRE Corporation

Campaign objective: A threat actor starts with an objective, such as changing a population's opinion on a topic (Brexit, war in Syria, Hong Kong protesters), steering voters toward a preferred candidate, or offering a counternarrative to the status quo.

1. Reconnaissance: Analyze target audience and how information flows through the target's environment, identify societal fissures to exploit, and design campaign execution plan.
2. Build: Build campaign infrastructure (computing resources, operational staff, initial accounts, personas, bots, and websites). Sophisticated threat actors may prepare the environment through tailored diplomatic, propaganda, and/or official messaging.
3. Seed: Create fake and/or misleading content, then launch campaign by delivering content to initial seeding locations such as online forums or social media platforms. Delivering content to multiple locations using different accounts can create the illusion that there are multiple sources for a story.
4. Copy: Write articles, blogs, and/or new social media posts referencing the original story. Witting agents can assist by using their media platforms for seemingly authentic distribution. The copy phase is a form of "information laundering," laying the groundwork for amplification by adding legitimacy to poorly sourced stories.
5. Amplify: Amplify content by pushing the story into the communication channels of the target audience. The use of bots and inauthentic accounts help provide momentum, then the content may be distributed by other witting agents (quasi-legitimate journalists) and unwitting agents (useful idiots). Successful amplification will result in the content being distributed by authentic voices, such as the mainstream media, which provides a trending effect and subsequent amplification by other unwitting agents and the target audience (i.e., now the unwitting audience is spreading misinformation because they do not know it is false and want to be helpful by informing their peers).
6. Control: Control the effect and manipulate the target's reaction by infiltrating conversations about the content. Incite conflict and/or strengthen the illusion of consensus by trolling comment sections of online posts. If a threat actor is accused of propagating disinformation, he or she may deny it vehemently, offer a counternarrative, and/or accuse an opposing party of planting the story.
7. Effect: Target actualizes the desired effect, such as voting for a preferred candidate, expressing behavior against a preferred group, or losing faith in the very idea of truth.

A threat actor may skip steps in this process, but doing so can reduce the effectiveness of the campaign and make it more difficult to mask the identity and objectives of the threat actor. Well-resourced threat actors may support and enable their campaigns through use of the entire influence toolkit, including economic and diplomatic activities, public relations, and espionage.

Case Studies

Below are two examples of disinformation campaigns executed by state-sponsored threat actors, which illustrate the phases of the disinformation kill chain.

In the first example, a fake story about the purported political assassination of Seth Rich, an employee of the Democratic National Committee (DNC), made its way from a Russian propaganda and conspiracy website, through Fox News, and into mainstream American discourse. It is important to note that Seth Rich's murder has remained unsolved, but no evidence has emerged which suggests that his death was a political assassination. The Rich family sued Fox News for "intentional infliction of emotional distress."[65] Fox News later retracted the article, saying "the article was not initially subjected to the high degree of editorial scrutiny we require for all our reporting."[66] Despite the retraction, high-profile Fox News personalities continued to discuss the conspiracy. After it trended, it was "true." Examples of content from the Seth Rich conspiracy are followed by an outline of the campaign (note the involvement of Russia's UK Embassy):

[65] Avie Schneider, "Appeals Court Reinstates Lawsuit Against Fox News Over Seth Rich Story," NPR, September 13, 2019, https://www.npr.org/2019/09/13/760681773/appeals-court-reinstates-lawsuit-against-fox-news-over-seth-rich-story.

The second example is the disinformation campaign launched against protestors in Hong Kong in 2019. Facebook and Twitter revealed that they had removed or suspended over 200,000 fraudulent accounts that were circulating information to discredit individuals and groups that had been protesting against the extradition bill pending in the Legislative Council of Hong Kong.[67] This campaign, sponsored by the Chinese government, sought to discredit the protestors and the larger pro-democracy movement in Hong Kong. The fraudulent accounts, some of which claimed to be users with American identities, pushed narratives praising the police and depicting the protestors in Hong Kong as cockroaches and terrorists.[68] The following are two disinformation items used in the campaign against the Hong Kong protests.

COMBATTING THE ISSUE

The rapid pace of innovations on social media platforms, the shifting tastes of users who skip from one platform to another, and the immense array of content on social media, and comparable forums make it extremely challenging for government entities and platform owners to monitor and regulate inauthentic behavior. Since no government or platform owner has unlimited resources to devote to combatting disinformation campaigns, the amount of effort and resources required to keep pace with ongoing campaigns detracts from the capacity to develop strategies and technology that might prevent future disinformation campaigns or mitigate the damage these campaigns might cause. Before turning to a response framework to combat disinformation campaigns, we will review current efforts by some of the major stakeholders.

Social Media Platforms

While some major social media platforms have taken steps to limit disinformation on their platforms, these steps, in general, have been reactive in nature. The use of third-party fact checkers and the development of techniques to detect inauthentic accounts are examples of such steps.[69] During elections, Facebook has established "war rooms" to identify and respond to disinformation found on the platform.[70] Google has committed to sharing information concerning disinformation campaigns with law enforcement and other platforms when encountered.[71] However, these platforms are currently fighting a losing battle. As soon as one disinformation campaign is dismantled or inauthentic account deleted, another rears its ugly head, forcing the platforms to engage in a perpetual game of "whack-a-mole".

Social media platforms are also implementing more proactive measures to combat disinformation campaigns. Facebook and Instagram now permit organizations, which buy political ads or issue-oriented ads on these platforms, to run these ads only under the identities that the platform has first verified.[72]

Following the takedown of the Hong Kong protest disinformation campaign described above, Twitter updated its advertising policies whereby it "will not accept advertising from state-controlled news media entities. Any affected accounts will be free to continue to use Twitter to engage in public conversation, just not our advertising products."[73] Since social media platforms have a financial incentive to permit content that attracts user attention, whether factual or false, they are unlikely without external pressure to fundamentally adjust their business models.[74]

Government

In many respects, government entities have a far more powerful and extensive arsenal with which to combat targeted disinformation campaigns than social media companies. Governments can impose economic sanctions and civil fines, arrest and prosecute, limit international travel, seize websites, and withdraw tax-exempt status. Governments can also attempt to pressure social media companies to modify their practices by exposing these practices to public scrutiny.[75] However, constitutional and other legal guarantees of free speech constrain government efforts to regulate the content of online information.

The U.S. government's approach to combatting disinformation campaigns includes the establishment of special units whose focus is to counter foreign influence and share threat information with the private sector. Additionally, there is growing support for amending Section 230 of the Communications Decency Act, which could potentially make social media platforms civilly liable for content that users post on these platforms.

Citizenry

The brunt of the effort to combat disinformation campaigns ultimately falls on the users of social media platforms and other online forums. Without users willing to endorse and share disinformation, disinformation campaigns would be deprived of the fuel that powers them – "We have met the enemy and he is us."[76] Some researchers have likened the problem of making users less vulnerable to disinformation to inoculating a population against disease, suggesting that disinformation can infect a population similar to a virus.[77] Media literacy campaigns can be an effective means of inoculating users against the disease of disinformation. The U.S.-based National Association for Media Literacy Education defines media literacy as "the ability to access, analyze, evaluate, create, and act using all forms of communication…Media literacy empowers people to be critical thinkers, effective communicators, and active citizens."[78]

There are indications that the American public sense the need to become more media literate. Studies indicate that news consumers had difficulty distinguishing between real news and disinformation during the 2016 U.S. presidential election.[79] These consumers thought accuracy, impartiality, and transparency were the most important factors in trusting news sources, and they want news organizations to do a more thorough job of vetting information on their websites and to provide more ready access to fact-checking resources.[80]

RESPONSE FRAMEWORK

Mitigating the threat posed by sophisticated disinformation threat actors requires a whole-of-society response. Our recommendations revolve around three themes: hit the actor, hit the technology, and build public resilience. Fundamental to these themes is a culture of shared responsibility and a framework to share threat information across stakeholders in a way that protects the privacy of social media users.

Hit the Actor

<u>Government Stakeholders:</u>

- Move aggressively to collect information regarding the order of battle, objectives, tactics, techniques, and procedures of disinformation threat actors;
- Hold those actors accountable through a comprehensive approach involving diplomatic pressure, adversary engagement, criminal indictments, and daylighting their malign activities;
- Develop a prioritized list of events disinformation threat actors are likely to target (elections, political events, military exercises, census, etc.) and convene "war rooms" to bring together appropriate public and private sector stakeholders to combat disinformation in real time.

[78] "Media Literacy Defined," National Association for Media Literacy Education, accessed September 17, 2019, https://namle.net/publications/media-literacy-definitions/.
[79] Darrell M. West, "How to Combat Fake News and Disinformation," Brookings, December 18, 2017, https://www.brookings.edu/research/how-to-combat-fake-news-and-disinformation/.
[80] "Indicators of News Media Trust," Knight Foundation, September 11, 2018, https://www.knightfoundation.org/reports/indicators-of-news-media-trust.

Social Media Platforms:

- Improve disinformation discovery tools and promptly take down the threat actor's infrastructure upon discovery;
- Share relevant signatures of disinformation campaigns with other platforms;
- De-emphasize content promulgated by overt authoritarian state-sponsored organizations. Further prohibit political advertisement by such organizations.

Academia and Civil Society Researchers: Continue investigating active disinformation campaigns across the information environment and analyze past campaigns to better understand the threat actors, their motives, and their techniques.

Hit the Technology

Government Stakeholders: Continue funding research for the development of technical tools to identify disinformation campaign signatures across platforms, including coordinated inauthentic behavior (e.g., creation of false personas, creation of fraudulent groups and websites, deployment of bots and trolls, and other suspicious account activity) and associated inauthentic content (e.g., fake or manipulated video, audio, images, text, and documents).

Industry and Academia: Design, build, and sell technical tools to identify and analyze disinformation campaigns across platforms.

Social Media Platforms: Employ technical tools to rapidly identify and analyze disinformation campaigns.

Build Resilience

Educational Institutions: Educational programs, from primary through graduate level, should integrate media literacy into their curricula. Increased media literacy across society would build resilience in the face of disinformation attacks, hardening the nation's defenses against both foreign and domestic disinformation actors. Media literacy and mature information consumption could be framed as a patriotic choice in defense of democracy.

Advocacy Groups: Advocacy and special interest groups (AARP, NAACP, Veterans of Foreign Wars, etc.) should promulgate media literacy information through their information distribution channels in a format tailored to their membership (e.g., The War on Pineapple).[81]

Government Stakeholders:

- *Transparency* – Legislation should emphasize the importance of content transparency and authenticity. Follow through on Honest Ads Act proposed in the U.S. Senate, which currently has bipartisan support. The act would amend the 1971 definition of "electioneering communication" to include internet-based political advertising, making internet-based ads subject to the same disclosure requirements as television, radio, and print media.
- *Literacy* – Fund research investigating the impact of disinformation campaigns across demographics and effective methods for providing media literacy education to those demographics.

[81] Department of Homeland Security, "The War on Pineapple: Understanding Foreign Interference in 5 Step," Cybersecurity and Infrastructure Security Agency, June 2019, https://www.dhs.gov/sites/default/files/publications/19_0717_cisa_the-war-on-pineapple-understanding-foreign-interference-in-5-steps.pdf.

Academia and Civil Society Researchers:

- *Transparency* – Continue investigating the methods and technical means to provide transparency to the source of online content, such as a "nutrition label" for content providers (i.e. the Trust Project).[82]
- *Literacy* – Conduct media literacy research to identify trends in susceptibility to disinformation across demographics, the negative impact of disinformation campaigns, and approaches to providing media literacy education to susceptible populations.

Social Media Platforms:

- *Transparency* – Provide transparency regarding the geographic location of organizational page owners, history of name changes for the page, and apply "nutrition label" type information for organizational content providers.
- *Literacy* – Make readily available for users information about the platform's policies on disinformation and provide educational material about the judicious consumption of information online.

News Media Organizations:

- *Transparency* – Provide transparency regarding the source, author, and/or producer of news content, including their expertise, funding, conflicts of interest, and agenda. This information should be embedded with content and easily discoverable by consumers. News media organizations should strive to meet journalism standards of trustworthiness, such as citing sources, correcting mistakes, and avoiding conflicts of interest and political bias. Apply a news content "nutrition label" or Trust Mark[83] so consumers are aware of any explicit bias.

Information Sharing

An information sharing and analysis organization should be established with members from social media companies, research institutions, and news media organizations with the following objectives:

1. Establish a repository of social media data accessible to vetted researchers. Data stored and shared in a way that ensures user privacy (a trusted third party may act as gatekeeper);
2. Provide a framework for cross-platform analysis of disinformation campaigns to better understand threat actors, their tactics, and the impact of their activities;
3. Promote the advancement of methodologies, technical tools, and strategies for detecting disinformation, neutralizing threat actors, and reducing the negative impact of disinformation;
4. Facilitate information exchange between the federal government (appoint government lead responsible for disinformation issues) and social media companies;
5. Provide a process for sharing real-time threat information in a way that ensures user privacy.

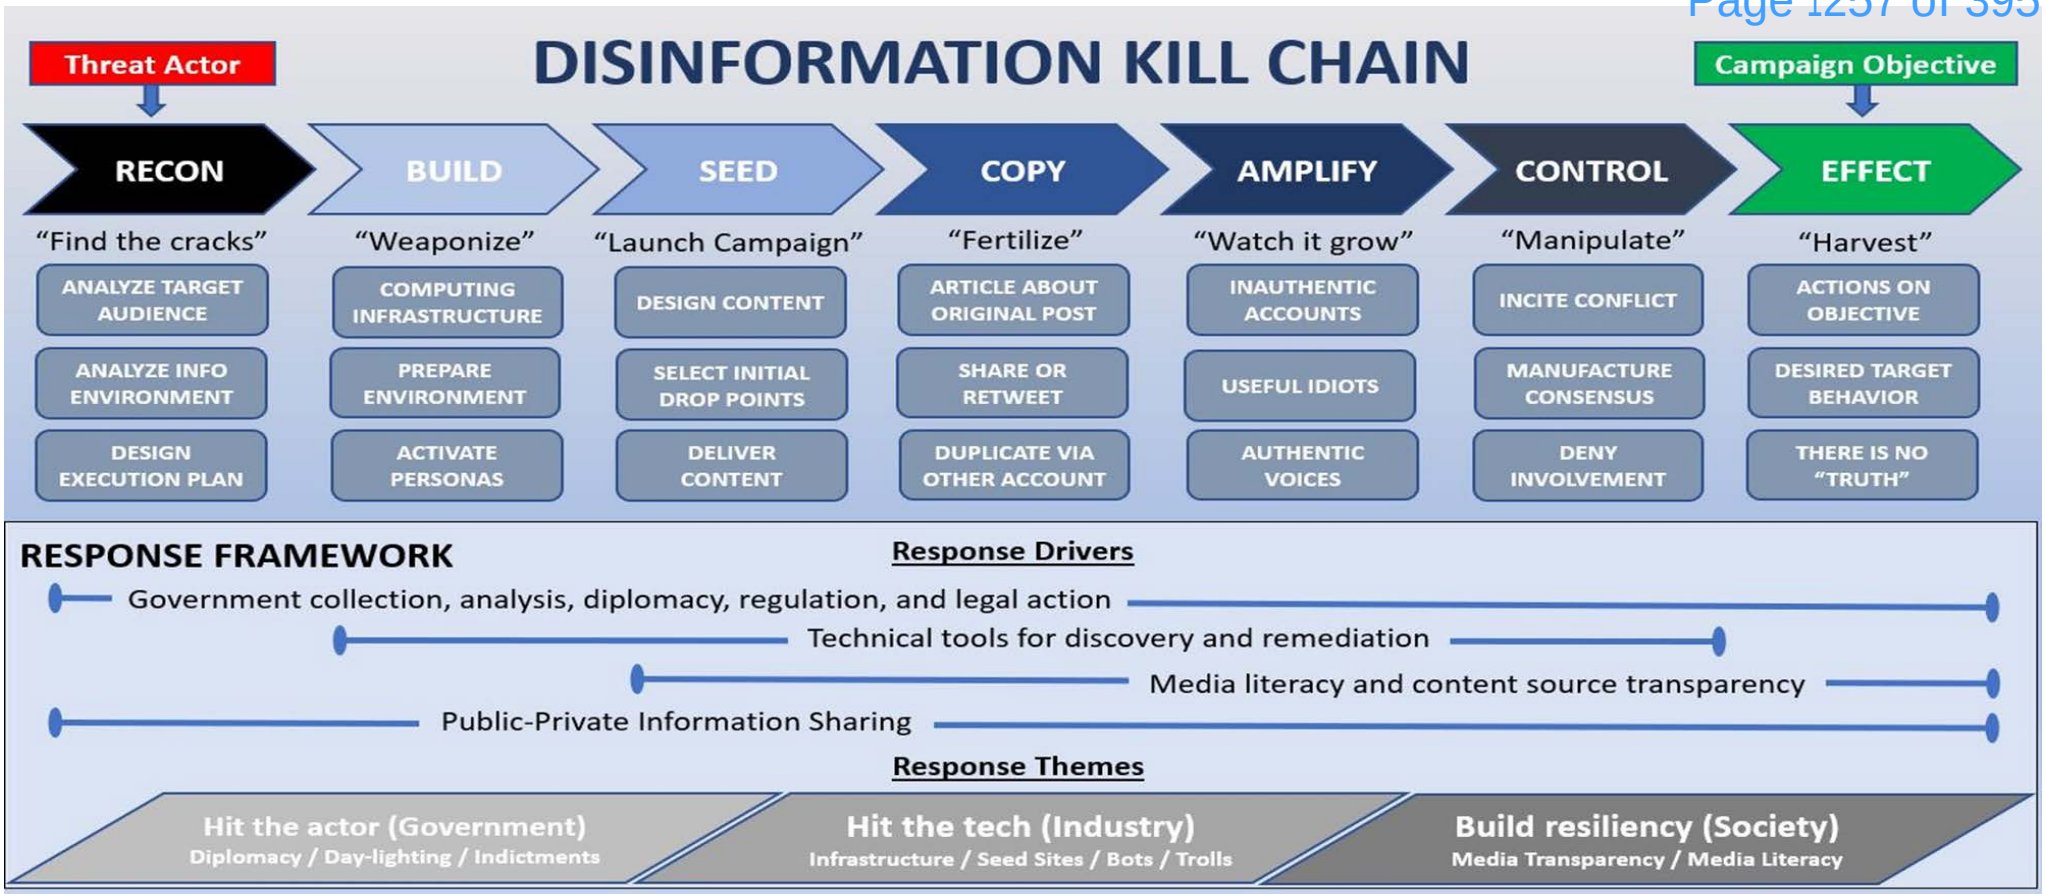
CONCLUSION

Since the events of the 2016 U.S. presidential election, the phenomenon of disinformation campaigns has received a great deal of attention, not just in the news media, but from government, academic, and commercial platforms determined to identify and understand it. While research efforts are plentiful, there is still much to learn about these campaigns and how best to defend against them. While it is not appropriate to dictate what media content Americans consume, we can, as researchers, suggest that opportunities for collaboration across interested sectors should continue to expand and to encourage public education to build resilience.

In a media environment where mere popularity, attention, and trending imbue truth and legitimacy, the internet can become a turbo-charged rumor mill with no editorial board. Disinformation can generate a lot of activity in a very short period of time, but whether this disinformation amounts to little more than noise in the system or represents a genuine threat is often not readily apparent. This paper emphasizes the importance of understanding targeted disinformation campaigns in the interest of hardening public defense against them. This includes understanding the threat actors who propagate these campaigns, how users are prone to them in a complex information environment and gaining the ability to identify these campaigns through their tell-tale signs.

Combatting disinformation campaigns by curtailing the free exchange of ideas could lead to a pyrrhic victory. Limits on free speech would further the objectives of threat actors seeking to weaken our democratic values. We must instead focus on building resilience, hitting the actor, and undermining their technical advantage. As these efforts mature, stakeholders can identify and counter campaigns "left of amplify," thus neutralizing the threat to democratic society and maintaining the integrity of our information environment.

Appendix: Disinformation Kill Chain



Note: A disinformation threat actor may skip steps in the kill chain process. However, doing so can reduce the effectiveness of the campaign and erode protections aimed at obfuscating the identity and objectives of the actor.

Information Types

Propaganda has a political connotation and is often connected to information produced by governments (the lines between advertising, publicity, and propaganda are often unclear).

Disinformation is manufactured information that is deliberately created or disseminated with the intent to cause harm.

Misinformation is false information shared without the intent to mislead.

Malinformation is genuine information, typically private or revealing, that may be distributed in a campaign to cause harm to a person's reputation to further the campaign s objective.

Inauthentic Information is *not* transparent in its origins and affiliation. The source of the information tries to mask its origin and identity.

Authentic Information is transparent in its origins and affiliation. The source of the information is unhidden.

OFFICE *of* INTELLIGENCE *and* ANALYSIS

INTELLIGENCE IN VIEW

23 SEPTEMBER 2022

(U//FOUO) Online Foreign Influence Snapshot: August 2022

(U//FOUO) We judge that narratives driven by Chinese, Iranian, and Russian state media, and proxy websites linked to these governments, often involve fact-based articles as well as editorials; these publications may include misinformation, disinformation, or factual but misrepresented information. This monthly "Snapshot" compiles English-language narratives, which we assess are intended for US and Western audiences, and highlights both consistent trends and emergent messaging, which we assess to reveal foreign actors' changing influence priorities. We judge that, typically, China uses state and proxy media—including US-based outlets—to try to shape diaspora conduct and US public and leadership views; Iran state media manipulates emerging stories and emphasizes Tehran's strength while denigrating US society and policy; and Russia uses both state and proxy media to amplify narratives seeking to weaken Washington's global position relative to Moscow's. This snapshot identifies the most persistent or emergent narratives being spread by these actors for English-speaking—probably US—audiences, as well as narratives of interest to Homeland Security stakeholders.

OVERALL GRAPHIC CLASSIFICATION: UNCLASSIFIED//FOR OFFICIAL USE ONLY

KEY TAKEAWAYS

CHINA

(U//FOUO) Chinese state media continued July's heavy shift to Taiwan issues—away from significant focus on Ukraine or COVID-19—while also claiming that several US domestic controversies show a failing democracy. Outlets denounced visits to Taiwan by US politicians as political grandstanding, and as attempts to undermine the One-China policy.

IRAN

(U//FOUO) Iranian state media focused on long-standing narratives. Outlets praised Tehran's purported efforts to revitalize the Joint Comprehensive Plan of Action (JCPOA), while criticizing Washington's negotiating stance, and pushed stories of US social discord, including inflation and the search of the former president's property.

RUSSIA

(U//FOUO) Russian state media and proxy websites continued their heavy focus on Ukraine by blaming global economic, energy, and food insecurity on the Western response. They also alleged that Ukrainian military actions endangered the Zaporozhye nuclear power plant. Moscow further highlighted its support for Beijing after the Taiwan visits of US Congressional delegations.

AUGUST CONSISTENT AND EMERGENT NARRATIVES

(U) US CONGRESSIONAL VISITS TO TAIWAN

(U) Chinese state media denounced the 2–3 August visit to Taiwan by the US Speaker of the House as a desperate act to boost Democrats' popularity and interfere with China's sovereignty; they also decried two later Congressional delegations as political showboating ahead of US midterm elections.[1–6]

(U) ONE-CHINA POLICY

(U) Chinese state media amplified narratives alleging US provocations in the Taiwan Strait, claiming that Washington is undermining the One-China principle, and denouncing US actions as hegemonic and designed to destabilize Indo-Pacific stability.[7,8,9]

(U) US DOMESTIC ISSUES

(U) Chinese state media amplified news stories involving contentious US domestic issues such as alleged abuses of immigrants, neglect of veterans, gun control, and crime rates. They characterized these issues as showing that US democracy and leaders are ineffective and that Washington is hypocritical in critiquing human rights abuses abroad.[10,11,12,13]

(U) JCPOA

(U) Iranian state media criticized the US position in JCPOA negotiations, asserting that Tehran has made reasonable demands and offered constructive solutions, while Washington was less committed to negotiating.[18,19,20]

(U) INFLATION

(U) Iranian state media amplified stories on contentious US domestic issues, particularly the US inflation rate, resulting sacrifices by US citizens, increasing political turmoil due to the economy, and growing disapproval ratings for the current US president.[21,22,23]

(U) MAR-A-LAGO SEARCH

(U) Iranian state media amplified reporting about the search of the former president's Mar-a-Lago Club[USPER], criticisms of the DOJ and FBI, and discord between Republicans and Democrats. Outlets also pushed stories about supporters of the former president who allegedly sent death threats to the US Attorney General and held armed protests by FBI buildings.[14,15,16,17]

(U) WAR IN UKRAINE

(U) Russian state media and proxies alleged Ukrainian military atrocities, and blamed Western support to Ukraine for price and energy inflation, and food insecurity.[24,25,26,27]

(U) ZAPROZHYE NUCLEAR POWER PLANT

(U) Russian state media and proxies amplified allegations that the Ukrainian military shelled the Russia-held nuclear plant in Zaporozhye, Ukraine, blaming Kyiv for any potential nuclear disaster.[28,29,30]

(U) US CONGRESSIONAL VISITS TO TAIWAN

(U) Russian state media and proxies focused on the visits to Taiwan by the US Speaker of the House and later congressional delegations, while promoting Russia's alliance with China as a sign of falling US global influence.[31,32]

Source, Reference, and Dissemination Information	
Prepared By	(U) Cyber Mission Center
For Questions, Contact	(U) DHS-SPS-RFI@hq.dhs.gov
Privacy, Civil Rights, Civil Liberties, Intelligence Oversight Notice	(U//FOUO) US persons linking, citing, quoting, or voicing the same arguments raised by these foreign influence activities likely are engaging in First Amendment-protected activity, unless they are acting at the direction or control of a foreign threat actor. Furthermore, variants of the topics covered in this product, even those that include divisive terms, should not be assumed to reflect foreign influence or malign activity absent information specifically attributing the content to malign foreign actors. This information should be considered in the context of all applicable legal and policy authorities to use open source information while protecting privacy, civil rights, and civil liberties.
Definitions	(U//FOUO) **Foreign Influence:** Any covert, fraudulent, deceptive, or unlawful activity of foreign governments—or persons acting on their behalf—undertaken with the purpose or effect of influencing, undermining confidence in, or adversely affecting US democratic processes or institutions or otherwise affecting socio-political sentiment or public discourse to achieve malign objectives. • (U//FOUO) **Covert Influence:** Activities in which a foreign government hides its involvement, including the use of agents of influence, covert media relationships, cyber influence activities, front organizations, organized crime groups, or clandestine funds for political action. • (U//FOUO) **Overt Influence:** Activities that a foreign government conducts openly or has clear ties to, including the use of strategic communications, public diplomacy, financial support, and some forms of propaganda. (U//FOUO) **Disinformation:** A foreign government's deliberate use of false or misleading information intentionally directed at another government's decisionmakers and decision-making processes to mislead the target, force it to waste resources, or influence a decision in favor of a foreign government's interests. (U//FOUO) **Malinformation:** An adversary's deliberate use of otherwise verifiable information with malicious intent, such as by amplifying the information selectively or out of context, or to the detriment of specific persons. (U//FOUO) **Misinformation:** An adversary's use of false or misleading information. An adversary's intent can change misinformation to disinformation.
Malign Foreign Influence Collection and Analysis Methodology	(U//FOUO) The Office of Intelligence and Analysis (I&A) collects and receives reporting on messaging from foreign governments or any entity assessed to be operating on behalf of a foreign power, including reporting on covert, fraudulent, deceptive, and unlawful activities undertaken with the purpose or effect of influencing, undermining confidence in, or adversely affecting our democratic processes or institutions or otherwise affecting socio-political sentiment or public discourse to achieve malign objectives. (U//FOUO) This reporting includes state-controlled media outlets—some that are officially registered under the Foreign Agents Registration Act—as well as covert proxy websites and social media accounts we assess are operated by foreign governments or entities operating on behalf of a foreign power. (U//FOUO) I&A routinely reviews the totality of this malign foreign influence content and, in the case of this report, identified a number of prominent COVID-19, domestic,

	and socio-political themes regularly presented by these actors since the beginning of 2020.
Dissemination	*(U//FOUO)* Federal, state, local, and private sector stakeholders.

Who We Are

Carnegie Mellon University
Software Engineering Institute

Carnegie Mellon University

- Pioneering discoveries that enrich the lives of people on a global scale
- Turning disruptive ideas into success through leading-edge research

Software Engineering Institute

- Bringing innovation to the U.S. government
- Researching software engineering, cybersecurity, and artificial intelligence

CERT Division

- Giving birth to modern cybersecurity
- Strengthening the resilience of systems and networks

[Distribution Statement A] Approved for public release and unlimited distribution.
Page 1263 of 3957

Why is disinformation an insider risk problem?

- **BLUF** – adversaries can exploit and recruit insiders by way of mis-, dis-, and malinformation

One possible example:

- Theory of psychological **reactance** - "an unpleasant motivational arousal that emerges when people experience a threat to or loss of their free behaviors. It serves as a motivator to restore one's freedom." (Steindl et al. 2015)
- Individuals experiencing reactance as a result of actions or perceived actions of an organization may engage in organizational deviance.
- Such individuals may now be susceptible to **influence** from **adversarial entities** seeking to harm the organizations that the individual is a member of.

- Possible triggers
  - Office requirement
  - Vaccination reqs.
  - Extremists ideologies

Page 1264 of 3957
[Distribution Statement A] Approved for public release and unlimited distribution.

From Insider Threat to Insider Risk

[Distribution Statement A] Approved for public release and unlimited distribution.

What is an “Insider Threat”?

- Malicious Insider
  - a current or former employee, contractor, or business partner who meets the following criteria:
    - has or had authorized access to an organization’s network, system, or data
    - has intentionally exceeded or intentionally used that access in a manner that negatively affected the **confidentiality, integrity,** or **availability** of the organization’s information or information systems
- Can also be inadvertent (non-malicious)

Page 1266 of 3957
[Distribution Statement A] Approved for public release and unlimited distribution.

From Insider Threat to Insider Risk

- **Insider Threat**: Insider threat for an organization is the potential for an insider to use their access, either maliciously or unintentionally, to act in a way that could negatively affect the organization.

- **Insider Risk:** Insider risk is the potential for loss associated with the realization of an insider threat.

As a discipline, we are moving away from a purely threat hunting mindset to one of risk management.

Page 1267 of 3957
[Distribution Statement A] Approved for public release and unlimited distribution.

Insider Risk and External Threat

- Insider risk is unique in organizational security in that the potential threat agents play **fundamental roles** in accomplishing the organization's mission.

- Insider goodwill is **essential** to both keeping intentional insider risk to a minimum and ensuring organizational success generally.

- External adversaries can potentially use mis- dis- and malinformation with coordinated **information maneuver campaigns** to target trusted insider.

Page 1268 of 3957
[Distribution Statement A] Approved for public release and unlimited distribution.

Mis- Dis- and Malinformation

[Distribution Statement A] Approved for public release and unlimited distribution.

Page 1269 of 3957

What does “disinformation” mean?

Page 1270 of 3957
[Distribution Statement A] Approved for public release and unlimited distribution.

Untangling the Terms

DISINFORMATION

Information that is false and spread specifically by those who DO know it's not true.

MISINFORMATION

Information that is false but spread by those who DON'T know it's not true.

MALINFORMATION

Information that is based on fact but is spread – out of context – by people intending to mislead or cause harm.

Page 1275 of 3957

Conversations around Insider Threat

- Why look at public conversation? Unlikely to find any insider threats…
- …but, there may be actors trying to shape the conversation to their own ends – corporations, nation-states, etc.
- Understanding the conversation will lead to informed research
  - Wisdom of the crowd
  - Data for computational modeling
- **Research question**: Can network analytical techniques be used to discover the nature of public conversations around insider threat and related organizational threats?
  - Gain **situational awareness** around public discourse

What can we do?

Inoculation against MDM -> Increase Organizational resilience

- The importance of positive deterrence
  - From Big Brother to Good Employer
  - Analogous to “hardening the workforce”
- MDM Awareness
  - Think before you share
  - Fact checking
  - Media Literacy

Page 1289 of 3957

Future work

- Can we identify when insiders become susceptible?
  - Draw on social sciences:
    - Reactance
    - Normative conflict
    - Social identity theory
    - Social influence theory
- Can we identify ways to recruit insider via information campaigns?
- Computational Modeling
    - Inform models with network data
    - Can we simulate base rates of insider influence
        - … and then, simulate policy interventions?
    - **Inside** - **outside**

Department of Defense

INSTRUCTION

NUMBER O-5240.21
May 14, 2009
Incorporating Change 1, November 19, 2010

USD(I)

SUBJECT: Counterintelligence (CI) Inquiries

References: See Enclosure 1

1. PURPOSE. This Instruction implements the policy in DoD Directive (DoDD) O-5240.02 (Reference (a)) to assign responsibilities and establish procedures for conducting CI inquiries within the Department of Defense pursuant to the authority in DoDD 5143.01 (Reference (b)).

2. APPLICABILITY. This Instruction:

a. Applies to OSD, the Military Departments, the Office of the Chairman of the Joint Chiefs of Staff and the Joint Staff, the Combatant Commands (CCMDs), the Office of the Inspector General of the Department of Defense, the Defense Agencies, the DoD Field Activities, and all other organizational entities within the Department of Defense (hereafter referred to collectively as the "DoD Components").

b. Does not apply to general security functions such as inquiries, procedures, or personnel security investigations as defined in DoD Instruction (DoDI) 5200.01 (Reference (c)), DoD 5200.1-R (Reference (d)), and DoD 5200.2-R (Reference (e)) or to information assurance (IA) monitoring as defined in DoDD 8500.01E (Reference (f)) and DoDI 8500.2 (Reference (g)).

3. DEFINITIONS. Unless otherwise noted, the CI terms used in this Instruction are defined in Reference (a).

a. CI inquiry. For the purposes of this Instruction, "CI inquiry" has the same meaning as "CI preliminary inquiry," defined in Reference (a).

b. reasonable belief. Defined in DoD 5240.1-R (Reference (h)).

This document contains information
exempt from mandatory disclosure under
the FOIA. Exemption 2 applies.

Page 1293 of 3957

4. POLICY. It is DoD policy (Reference (a)) that the CCMDs and the Defense Agencies with organic CI capabilities may conduct CI inquiries.

5. RESPONSIBILITIES. See Enclosure 2.

6. PROCEDURES. See Enclosure 3.

7. INFORMATION REQUIREMENTS. The information requirement contained in this Instruction is exempt from licensing in accordance with paragraphs C4.4.1., C4.4.7., and C4.4.8. of DoD 8910.1-M (Reference (i)).

8. RELEASABILITY. RESTRICTED. This Instruction is approved for restricted release. ~~Authorized users may obtain copies on the SECRET Internet Protocol Network from the DoD Issuances Web Site at http://www.dtic.smil.mil/whs/directives~~ *It is available to users with Common Access Card authorization on the Internet from the DoD Issuances Website at http://www.dtic.mil/whs/directives*.

9. EFFECTIVE DATE. This Instruction is effective immediately.

James R. Clapper, Jr.
Under Secretary of Defense for Intelligence

ENCLOSURE 2

RESPONSIBILITIES

1. UNDER SECRETARY OF DEFENSE FOR INTELLIGENCE (USD(I)). The USD(I), in accordance with References (a) and (b), shall develop, coordinate, and oversee the implementation of DoD CI inquiry policy.

2. DEPUTY UNDER SECRETARY OF DEFENSE FOR HUMAN INTELLIGENCE, COUNTERINTELLIGENCE, AND SECURITY (DUSD(HCI&S)). The DUSD(HCI&S), under the authority, direction, and control of the USD(I), shall:

a. Develop and recommend CI inquiry policy.

b. Serve as the OSD staff point of contact for CI inquiry-related issues.

3. DIRECTOR, DEFENSE COUNTERINTELLIGENCE AND HUMAN INTELLIGENCE CENTER (DCHC). The Director, DCHC, under the authority, direction, and control of the Director, Defense Intelligence Agency, and in accordance with Deputy Secretary of Defense Directive-Type Memorandum 08-032 (Reference (j)) shall:

a. Oversee the conduct of CI inquiries.

b. Serve as the focal point to analyze information gleaned from CI inquiries to identify and report trends, anomalies, and other matters of CI interest.

c. Provide the CCMDs and Defense Agencies with the guidelines and reporting process for CI inquiries.

d. Facilitate CCMD and Defense Agency requests for review of CI inquiries referred for investigation when Military Department CI organizations or the Federal Bureau of Investigation (FBI) decline to investigate.

e. Develop, conduct, and validate training for personnel conducting CI inquiries in accordance with DoDI 3305.11 (Reference (k)).

4. CCMD COMMANDERS (CCDRs) AND HEADS OF THE DEFENSE AGENCIES WITH ORGANIC CI ASSETS. The CCDRs and the Heads of the Defense Agencies with organic CI assets shall:

a. Conduct CI inquiries in accordance with Enclosure 3.

b. Notify the Director, DCHC, of CI inquiries in accordance with DCHC guidelines and reporting processes.

c. Submit to DCHC requests for review of CI inquiries referred for investigation when Military Department CI organizations or the FBI decline to investigate.

d. Require that all personnel assigned to conduct CI inquiries are appropriately trained to the standards established by the Director, DCHC, prior to participation in any CI inquiry.

5. SECRETARIES OF THE MILITARY DEPARTMENTS. The Secretaries of the Military Departments shall:

a. Evaluate CI inquiry referrals and initiate CI investigations in accordance with DoDI 5240.04 (Reference (l)) when warranted.

b. Consider using, as appropriate, the organic CI capabilities of the CCMDs and Defense Agencies to assist with the investigation of referred CI inquiries.

ENCLOSURE 3

PROCEDURES

1. INITIATING CI INQUIRIES

a. The CCMDs and Defense Agencies with organic CI assets shall initiate a CI inquiry upon receipt of information that cannot be resolved through security procedures, such as:

(1) The existence of a clandestine relationship between DoD personnel and agents of a foreign power, or of relationships between DoD personnel and individuals associated with international terrorist organizations.

(2) Failure to report contact with a foreign intelligence service.

(3) Other intelligence and/or international terrorist threats directed against U.S. Government or military facilities, property, information, operations, or personnel that appear to be at the behest of a foreign power or international terrorist organization.

(4) Failure to comply with the reporting requirements of DoDI 5240.6 (Reference (m)).

b. The goal of the CI inquiry is to establish or refute a reasonable belief that a particular person is acting for or on behalf of, or an event is related to, a foreign power engaged in spying or committing espionage, sabotage, treason, sedition, subversion, assassinations, or international terrorist activities.

c. The CCMDs and Defense Agencies shall use DCHC guidelines and reporting processes to document CI inquiries.

d. The CCMDs and Defense Agencies shall not delay the initiation of a CI inquiry for any improper purpose, to include attempts to delay the initiation of a CI inquiry to permit the use of otherwise prohibited techniques through security or other inquiry methods.

2. CONDUCTING CI INQUIRIES

a. CI inquiries shall be conducted in accordance with Reference (h).

b. (FOUO) Within the Department of Defense, only Military Department CI organizations have CI investigative authority and are authorized to use the intrusive techniques identified in Reference (h). The CCMDs and Defense Agencies are not authorized to use procedures 5 through 11 and procedure 13 of Reference (h). Additional prohibited techniques after the initiation of a CI inquiry are:

(1) (FOUO) Examining any information technology system or information within, except information that was gathered during the course of IA monitoring conducted before the CI inquiry began.

(2) (FOUO) Conducting consensual physical searches.

(3) (FOUO) Questioning the subject of a CI inquiry.

(4) (FOUO) Administering oaths, advising of rights pursuant to the Fifth Amendment to the Constitution of the United States (Reference (n)), and taking sworn statements, excluding unsworn official statements, except when an inquiry officer who is subject to chapter 47 of title 10, United States Code, (Reference (o)) is questioning another person who is also subject to Reference (o). In this case the inquiry officer must be familiar with the requirements of Article 31(b) of Reference (o) and, if necessary, consult with the local servicing judge advocate.

(5) (FOUO) Conducting liaison with Federal or military prosecutors unless accompanied by a representative of a CI investigative agency.

(6) (FOUO) Conducting polygraph examinations of subjects of CI inquiries.

(7) (FOUO) Requesting financial information from non-governmental institutions.

(8) (FOUO) Formally recruiting and tasking human sources.

c. CI inquiries need not be opened to:

(1) Review agency files at the request of an intelligence community (IC) member.

(2) Check agency and DoD databases to determine if an individual holds or held a DoD security clearance and has or had access to classified information or material, and provide the results to an IC member.

(3) Report, through an Intelligence Information Report (IIR), information that does not meet the threshold for initiating a CI inquiry but is of intelligence value.

(4) Report information that indicates a violation of Federal, State, or local laws. This information shall be disseminated to Federal, State, or local law enforcement agencies as appropriate and in accordance with Reference (h).

(5) Resolve internal security matters.

3. FOLLOW-UP ACTIVITIES

a. During a CI inquiry, if information establishes a reasonable belief that a clandestine relationship exists between DoD personnel and agents of a foreign power; that DoD personnel

have unreported or unauthorized contact with a foreign intelligence service; or that DoD personnel have relationships with individuals associated with international terrorist organizations, this information shall be reported immediately to DCHC and to the appropriate Military Department CI organization or the FBI.

b. If a CCMD or Defense Agency CI inquiry develops foreign intelligence information or indications of international terrorist threats, this information shall be reported through IIR or directly to the affected organization in accordance with DoDI S-5240.17 (Reference (p)) or DoDD 2000.12 (Reference (q)).

c. Once a matter has been accepted for investigation by the investigative organization, the CCMD or Defense Agency shall terminate its CI inquiry activities, but may continue to document, through the CI inquiry, any assistance provided to the CI investigative organization.

d. CCMD and Defense Agency CI personnel may participate in a CI investigation involving their organization, with the permission and under the direction of the lead investigating Service CI organization or the FBI.

U.S. Department of Justice
Federal Bureau of Investigation

FOREIGN GOVERNMENT Efforts to Influence Policy & the Public

Foreign governments routinely engage in efforts to influence our domestic and foreign policies, legislation, democratic processes, and public opinion. These governments sometimes exert this influence by employing lobbyists, public relations professionals, prominent businesspeople, or former U.S. government officials on their behalf. Such efforts are legal—if they are transparent.

Originally enacted in 1938, the Foreign Agents Registration Act—known as FARA—helps the American people and their elected officials understand who is really behind such influence activity. The statute requires persons working on behalf of foreign governments or other foreign principals (including Americans) to disclose their relationships to foreign principals and information about their activities.

Agents who fail to register are violating federal law, and they can be prosecuted if their failure is deliberate.

How FARA Works

The Foreign Agents Registration Act (FARA) Unit, which is part of the U.S. Department of Justice's National Security Division, administers and enforces FARA. Agents who register must disclose their agreements with foreign principals, report the amounts and sources of funding they have received, and provide a log of all activities they have performed on behalf of foreign principals. Agents must also label informational materials they disseminate to disclose their agency relationship, and file copies of those materials with the Unit.

FARA's definition of foreign principals includes foreign governments, political parties, corporations, individuals, and nongovernmental organizations. It defines agents as those who act at the request of or under the direction, control, or order of a foreign principal.

FARA requires an agent of a foreign principal to register when engaging in political activities or those designed to influence the U.S. government or public regarding domestic or foreign policy; taking part in perception management efforts or acting as a public relations counsel, publicity agent, or information service employee; performing fundraising or disbursement of funds; or lobbying Congress or the Executive Branch.

FARA includes exemptions for certain agents who register with the Secretary of the Senate and the Clerk of the House of Representatives under the Lobbying Disclosure Act and are therefore permitted to lobby the Legislative or Executive Branches. However, this exemption is not available to agents of foreign governments or foreign political parties—or when a foreign government or foreign political party is the principal beneficiary of the lobbying activities. Covert foreign influence campaigns often run afoul of this provision.

Read FARA at 22 U.S.C. § 611 et seq., and learn more at www.fara.gov.

"FARA helps protect the integrity of American democracy by combating covert foreign government influence in our political process."

—Assistant Attorney General
John C. Demers

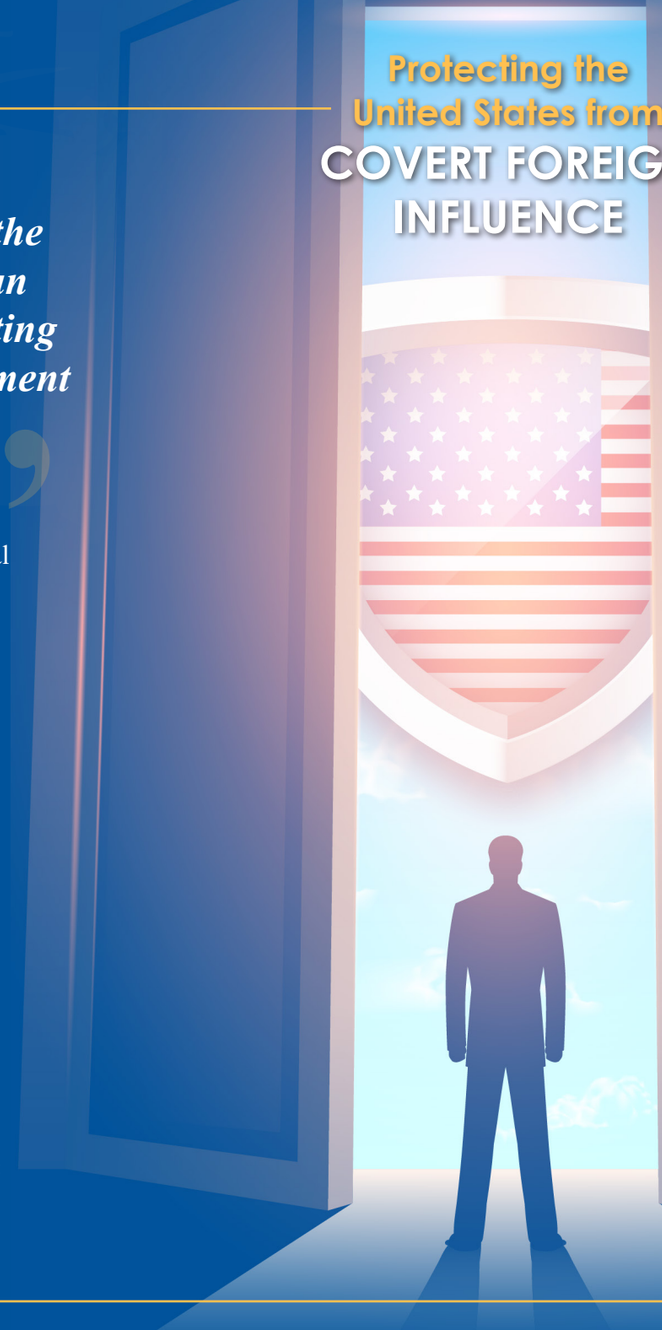
FARA
Foreign Agents Registration Act

Protecting the United States from COVERT FOREIGN INFLUENCE



IDENTIFYING UNREGISTERED FOREIGN AGENTS

How can you tell if someone might be acting as an agent of a foreign principal and might be required by FARA to register with the Department of Justice? You could encounter a scenario like one of these:

SCENARIO 1

A PROMINENT BUSINESSMAN schedules an appointment to discuss energy policy. While you expect the meeting to focus on how U.S. policy affects his company or industry, instead he discusses an unrelated topic: a foreign country's image in the United States. During the discussion, the businessman seems to repeat statements previously made by the foreign country's leaders or spokespeople.

SCENARIO 2

A FORMER CONGRESSMAN arranges a meeting to discuss tariffs on agricultural products, but the topic seems outside his scope or areas of interest, as he previously represented an urban district and was uninvolved in agricultural or trade policy. When you meet, the former Congressman does not discuss tariffs but instead focuses on a foreign country's high-profile and longstanding request to release a prominent dissident, mirroring talking points used by the foreign country's leaders or spokespeople.

SCENARIO 3

A LOBBYIST requests a meeting to discuss telecommunications infrastructure, but when she arrives, she is accompanied by members of a foreign government or political party. They do most of the talking, discussing only the significance of telecommunications infrastructure to the foreign country—not to any U.S. businesses or companies—and highlighting issues significant to their country's relationship with the United States.

SCENARIO 4

A LOBBYIST arranges a meeting with you, and you confirm he has registered under the Lobbying Disclosure Act. However, when you meet, the lobbyist discusses topics of interest to foreign entities that are not mentioned in his filings.

Any of these scenarios could indicate you have come in contact with an unregistered agent of a foreign principal.

If you suspect you've encountered an unregistered agent of a foreign government, contact your local FBI field office or the Department of Justice's FARA Unit.

FBI

COUNTERINTELLIGENCE STRATEGIC PARTNERSHIP INTELLIGENCE NOTE (SPIN)

SPIN: 15-007 SEP 2015

(U) Chinese Talent Programs

(U) INTRODUCTION

(U) Chinese Talent Programs are a vital part of Chinese industry. Talent programs recruit experts to fill technical jobs that drive innovation and growth in China's economy. National, provincial, and municipal talent recruitment programs provide opportunities for experts to work in industry and academic organizations supporting key areas deemed critical to China's development. The talent programs recruit experts globally from businesses, industry, and universities with multiple incentives to work in China. Associating with these talent programs is legal and breaks no laws; however, individuals who agree to the Chinese terms must understand what is and is not legal under US law when sharing information. A simple download of intellectual property (IP) or proprietary information has the potential to become criminal activity.

(U//FOUO) The large number of foreign students, researchers, scientists, and professionals in the United States, combined with current technological capabilities, allows foreign governments to contact and recruit individuals with the hopes to acquire advanced technology without research costs. While the majority of the population are law abiding individuals, anyone has the capability to acquire information. The theft of information can come from current or former employees, business partners, consultants, contractors, temporary hires, foreign agents, suppliers, or even vendors who have access to proprietary information.

(U) Recruiting these individuals allows China to:

- (U//FOUO) Gain access to research and expertise for cutting edge technology
- (U//FOUO) Benefit from years of scientific research conducted in the United States supported by US Government grants and private funding
- (U//FOUO) Severely impact the US economy.

(U) The goal of this SPIN is to provide an overview of the potential threats posed by the Chinese Talent Programs.

(U) CHINA'S TWELFTH FIVE-YEAR PLAN

(U//FOUO) China's National People's Congress approved a new national development program that will last for the next five years. These Five-Year Plans emphasize higher quality growth by determining themes and targets to ensure long-term prosperity. China is currently on its Twelfth "Five-Year Plan" covering 2011 to 2015, which focuses on the following:

1. **New Energy**: Nuclear, wind, and solar power
2. **Energy Conservation and environmental protection**: Energy reduction targets
3. **Biotechnology**: Drugs and medical devices
4. **New Materials**: Rare earths and high-end semiconductors
5. **New Information Technology**: Broadband networks, Internet security infrastructure, and network convergence
6. **High-end equipment manufacturing**: Aerospace and telecom equipment
7. **Clean energy vehicles**

(U) Among the plan's goals is the transformation of China from a manufacturing hub to a world leader in innovation, which will be partly met by an increase in highly skilled workers from 114 million to 180 million by 2020. Additionally, the Chinese Government spending on talent development is expected to increase from 10.75 percent of the country's gross domestic product (GDP) to 15 percent by 2020, which is approximately $1.3 trillion based on the 2014 China GDP. China's talent development program acts as a vehicle to achieve the Five Year Plan's goals.

(U) THOUSAND TALENTS PROGRAM

(U//FOUO) China's most prominent national talent recruitment program is the "Recruitment Program of Global Experts," which is commonly known as the Thousand Talents Program. It focuses on identifying key national-level organizations and associated personnel involved in implementation and management.

(U) Its goal is to recruit ethnic Chinese experts from Western universities, research centers, and private companies to boost China's national capabilities in the science and technology (S&T) fields and to move China forward as an innovative nation. The program also implemented sub-programs for both young and foreign (non-ethnic Chinese) experts.

(U//FOUO) Originally, this program had a five-to-ten year goal of recruiting 2,000 professionals worldwide who could lead innovation and pioneering work in key technologies, and promote the development of emerging industries. However, this program expanded its scope -- recruiting far more than the initial goal of 2,000 individuals -- and extended its life through at least 2020.

(U) In order to be eligible as a candidate for the Thousand Talents Program, an individual must be in a field of study the Chinese Academy of Science (CAS) deems critical or meet the following criteria:

- (U) Expert or scholar with full professorship in a prestigious foreign university or research and development (R&D) institute
- (U) Technical managerial professional in a senior position at an internationally known company or financial institution
- (U) Entrepreneur holding IP rights or key technologies and possesses overseas experience

(U) HUNDRED TALENTS PROGRAM

(U//FOUO) The Hundred Talents Program was launched in 1994 and was China's first overseas-oriented program to recruit high-level talent. The program is exclusively designed for cultivating scientific research personnel at CAS and focuses on attracting a younger talent pool.

(U//FOUO) The primary goal of the program is to cultivate a group of leaders in their areas of specialty to work at various CAS organizations. Although focused on recruiting overseas Chinese, the Hundred Talents Program will accept applicants who are currently in China. These domestic-based applicants must demonstrate internationally-recognized expertise. Most of the Hundred Talents selectees have become "chief scientists" of various 973 Program (National Basic Research Program) projects; "responsible persons" on 863 Program (National High Technology R&D Program) projects; associated with Project 111, which recruits the world's top researchers and scholars regardless of nationality or ethnic origin to work with Chinese universities; directors of state key laboratories or CAS key laboratories; or have taken high-level leadership positions within CAS institutes or offices. Selectees of this program are given 600,000 RMB (about $99,000) for resettlement costs and two million RMB (about $330,000) in startup funding for research.

(U) OTHER TALENTS PROGRAMS

(U//FOUO) The Innovative Talent Promotion Program is another Chinese Government-sponsored program. This program's ultimate goal is to create a cadre of world-class scientists and entrepreneurs who will lead technological innovation and allow China to compete internationally in S&T and strategic emerging industries.

(U//FOUO) The Thousand Youth Talents Program for Distinguished Young Scholars is a development program for young talent. Top candidates are sent to first-class universities overseas to study. These individuals are groomed into business professionals needed for the future development of China.

(U//FOUO) Lastly, there are programs that seek to develop entrepreneurial talent by focusing on building an internationally competitive corporate management cadre. The program plans to cultivate entrepreneurs with "world foresight, strategic thinking, pioneering spirit, and operating capability," and it sets a goal of having 10,000 talented personnel in management who have expertise in strategic planning, capital management, human resources management, finance and accounting, law, etc.

(U) THREAT TO US BUSINESS AND UNIVERSITIES

(U//FOUO) Chinese Talent Programs pose a serious threat to US businesses and universities through economic espionage and theft of IP. The different programs focus on specific fields deemed critical to China, to boost China's national capability in S&T fields. These subject matter experts often are not required to sign non-disclosure agreements with US entities, which could result in lost of unprotected information that jeopardizes contracts or research funding. One of the greatest threats toward these experts is transferring or transporting proprietary, classified, or export-controlled information, or IP, which can lead to criminal charges.

(U//FOUO) The threat not only targets businesses or universities but potentially targets the researchers or scientists themselves. The technology researched or developed not only costs millions of dollars but costs years, if not decades to develop. Additionally, the theft of information or IP creates a risk that someone else could take credit for the researcher's efforts. The information stolen can be recreated, resold or claimed by others, which in turn will cost the originator creditability and potential funding for future endeavors.

(U) Theft of intellectual property is an increasing threat to organizations and can go unnoticed for months or even years. In today's society, technology affords easier access to every aspect of academia and business. Some of these tools have become effective for recruiting, such as social media. Social media websites often display large amounts of personal data, such as who an individual works for, phone numbers, known associates, previous jobs, and locations. Additionally, websites like LinkedIn have full resumes, detailing the history of an individual's achievements and accomplishments.

(U) The FBI assesses each year the United States loses billions of dollars due to technology transfer. While it is important to conduct collaborative research, it is vital for the survival of US businesses and universities that they protect their information and mitigate lost or stolen information.

(U) Areas of Interest for Recruitment:

- Information Technology
- Biotechnology
- Aerospace
- Materials & Manufacturing
- Sensors & Optics
- Energy & Environment
- Basic Sciences

(U) MEDICAL CENTER OF WISCONSIN

(U) Zhao, J. Hua – (DPOB: 1971, China) In February 2013, Zhao, a research assistant at Medical College of Wisconsin (MCOW) under Professor Marshall Anderson, stole three vials of C-25, a compound patented by Anderson and used in his cancer research. Security footage examined during an internal investigation revealed Zhao entering Anderson's office and leaving shortly after.

(U) Zhao was reprimanded previously for placing laboratory data on his personal computer. The internal investigation found research data on C-25. Zhao claimed the data would be used to conduct further studies at Zhejiang University.

He was ordered to remove the data from his computer and place it on an MCOW computer. Additionally, MCOW discovered a posting by Zhao on an Internet site called Researchgate indicating he discovered a cancer fighting compound he wanted to bring back to China.

(U) In March 2013, Zhao was arrested. In addition to the 384 files found on Zhao's personal computer relating to Anderson's research was an application to the National Natural Science Foundation of China that provides funding for many talent programs and to a Chinese foundation claiming he invented C-25 and requesting funding for additional research. This application was an exact translation of the grant application written by Professor Anderson several years earlier. It was also determined that Zhao accessed his MCOW computer remotely on the day he was suspended and attempted to delete the files he stole relating to C-25. Zhao was convicted to time served in August 2013.

(U//FOUO) Zhao had a previous history of disregarding the appropriate handling of university property and had full access to Professor Anderson's lab. His access allowed him the ability to walk in and out of the lab at his own discretion to steal the vials of C-25 and laboratory data. Had C-25 not been patented by Anderson, Zhao could have claimed and patented the cancer-fighting compound for himself. Additionally, Zhao's LinkedIn profile indicated he held a position at Zhejiang University, which has ties to the Thousand Talent Program.

(U) DUKE UNIVERSITY

(U) Liu, Ruopeng – (DPOB: 1983, China) In 2006, Liu, a graduate student at Duke University, worked in the laboratory a US researcher studying metamaterials. Liu had full access to the researcher's lab, which conducted basic and fundamental research. While working for this researcher, Liu arranged meetings between the researcher's lab and Cui Tie Jun, a Chinese program manager associated with Project 111 (focused on basic science and advanced technology by recruiting the best international experts to China to study from). The idea behind this connection was to share ideas, however, the US researcher eventually realized most of the ideas were coming from his lab.

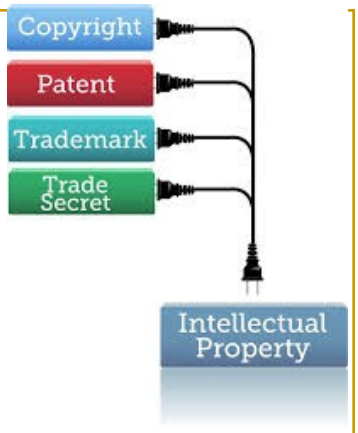
(U) Over the next few years, he discovered pictures and information related to his research used to market a business started by the Liu. The business originally seemed plausible to him, because he knew Liu was applying for positions with Massachusetts Institute of Technology, which tends to favor faculty members who also have an entrepreneurial bent. The information marketed by Liu attracted a Chinese technology company. Additionally, Liu invited two Chinese visitors associated with CUI's lab from Southeast University to visit the lab. The visitors took photographs of all the equipment in the lab, including the make and model, which in turn were used to reproduce the lab in China.

(U) In 2009, the US researcher received a book entitled *Metamaterials: Theory, Design, and Applications* by Cui, Liu, and the researcher that was published in the United States. Unknowingly, the researcher had in fact signed off on some forms and received multiple e-mails regarding the book by relying on Liu's interpretation. At the same time, Liu, Cui, and another Chinese individual collaborated on a research idea based on a paper regarding carpet-cloak theory later published in 2009 in an issue of *Science*. Located in the article is a footnote acknowledging the support from Innovation Technology, National Science Foundation, National Basic Research Program (973) of China, Natural Science Foundation of Jiangsu Province, and Project 111.

(U) While the researcher's lab does not conduct restricted research, it receives funding from the US Department of Defense and US Intelligence Community. Since the research was not restricted, there were no rules against or restrictions on the lab's collaborative research efforts. Liu did not have to sign a non-disclosure agreement. Liu moved back to China after the researcher retracted his recommendation for Liu's employment at Princeton with Dr. Stephen Chou, the head of the nanotechnology laboratory. Liu has reportedly established a research institution in Shenzhen.

(U//FOUO) By convincing the US researcher to collaborate with Cui, Liu was able to freely share information and invite visitors to the lab. Although this was not restricted research, the metamaterials research could have both military and civilian applications. The US researcher risked his research by allowing visitors to come into his lab without personally looking at their background and being too trusting of his scientific relationship with Liu.

(U) HOW TO PROTECT YOUR ORGANIZATION



(U) The first step to protecting your business or university is to identify the threat.

- Who would benefit from your information, processes, or strategies?
- Who are your competitors?
- Have individuals been unusually interested in what you do?

(U) The next step is to identify proprietary or trade secrets or IP. This includes, but is not limited to the manufacturing process, financial information, list of suppliers and customers, chemical formulas, marketing strategies, and R&D data. By understanding the threat and your business or university's critical technologies, it can help you identify methods in which they can be easily stolen. Theft, bribery, espionage, blackmail, hacking, and electronic intercepts are just some of the different methods individuals may use to steal trade secrets.

- (U) Have professors, students, and employees sign non-disclosure agreements.
- (U) Identify foreign personnel who are sponsored by professors/employees.
- (U) Understand agreements between international organizations and US businesses and universities.
- (U) Identify and label or mark IP or sensitive data that is most important to US businesses and universities.
- (U) Identify methods in which professors and employees are contacted (for example, e-mail, social media, conferences) and educate them on what solicitation looks like.
- (U) Report any incidents or concerns to your security office and local FBI field office.

(U) If you wonder about the safety of your research or intellectual property, or the legality of your interactions with China, ask yourself the following questions. If any of the answers concern you, or you would like additional information, please contact your local FBI Strategic Partnership Coordinator or FBI field office.

- (U) Do you collaborate with anyone who is currently in China?
- (U) Do you have any publications? If so, in which journals and with whom? Which institutions are they associated with?
- (U) What type of funding do you have to conduct your research? Where do you obtain your funding?
- (U) Do you belong to any professional societies? If so, which ones and where are the based?
- (U) Do you travel regularly to China? Is it for business or pleasure or both? How long do you stay in China during these trips? Are you working with anyone in China on your research during this time ?
- (U) How do you maintain contact with your laboratory in the United States while in China? Do you contact it via computer (login to laboratory site)?
- (U) Do you plan to return to China permanently? What will you do for employment?
- (U) Where did you attend school? What type of degrees did you earn? How did you apply for a fellowship, post-doctoral position, guest researcher or other employment with your current employer? Did someone you know refer you to this lab, university, or principal investigator?
- (U) What type of research do you conduct? What are the applications of this research? Do you expect to get a patent from this research?
- (U) With whom are you working at your laboratory? Do you collaborate with individuals from other research institutions in the United States or abroad?

APT Actors Likely to Target US Cleared Defense Contractors

Summary

APT actors in the near future likely intend to target US Cleared Defense Contractors (CDC) via spear phishing campaigns or network infrastructure compromises, according to recent intelligence. Common spear phish targets may include individuals featured on internet-facing CDC Web sites and high-ranking CDC executives.

FBI has observed APT actors over the past two years precede spear phishing campaigns with open source research of targeted US company websites, particularly sections containing contact information for company officials which include names, titles, telephone numbers, and email addresses. In one case, an APT actor sent spear phishing emails within one-to-two weeks after researching the targeted US company.

Historically, APT actors have a strong desire to collect US defense and scientific intelligence to further their interests and advance strategic goals. As a result, US CDCs and research facilities may likely be targets for cyber adversaries due to their involvement in national security and their close relationship with the US Government.

Most companies publicly share their contact information and high-level management names on their corporate Web pages. Some corporate employees share other forms of personally identifiable information on various social media platforms. Adversaries may use this publicly-posted information to target individuals with the end goal of infecting a corporate network for intelligence collection.

Common techniques used by APT actors include sending well-crafted spear phishing messages tailored to the professional interests of the target, the use of watering holes to redirect visitors to malicious Web sites, and the use of stolen or weak user credentials to exploit a network vulnerability. After a successful compromise, APT actors attempt to expand their access in the network to multiple systems to facilitate information theft.

APT actors have increased their activity over the last several years. Cyber attacks such as WannaCry and NotPetya in the spring and summer of 2017 are examples of increasing APT activity. While WannaCry and NotPetya were not directed at the United States, both had inadvertent negative effects on US systems. The FBI advises companies to be mindful that similar attacks may likely occur in the near future. Previous attacks have coincided with national holidays of cyber targets, such as Constitution Day in Ukraine on 28 June.

For recent guidance on mitigation strategies against spear phishing and network infrastructure targeting, please refer to the following joint technical alerts:

https://www.us-cert.gov/ncas/alerts/TA18-074A

https://www.us-cert.gov/ncas/alerts/TA18-106A

Recommendations:

The FBI recommends providers implement the preventative measures listed below to help secure their systems from attacks:

- Ensure anti-virus software and firmware is up-to-date

- Monitor employee logins outside normal business hours and other anomalous activity
- Close unused ports
- Monitor employee logins outside normal business hours and other anomalous activity
- Provide regular training to employees regarding current social engineering threats, scrutinizing e-mail links and attachments, and pop-ups from attachments requesting enabling certain functions (i.e., macros)
- Brief executives at your company to be extra vigilant and report any suspicious email messages
- Apply extra scrutiny to e-mail messages with links or attachments directed toward executives

13. ABSTRACT (maximum 200 words)

This thesis seeks to evaluate the effectiveness of the Russian disinformation campaigns targeting the 2020 U.S. elections and the efforts taken by the U.S. government and social media companies to thwart them. To develop countermeasures for Russian interference activities targeting future American elections, this thesis asks the question:

What impact did the countermeasures taken by the American social media companies and the U.S. government have on Russian social media influence campaigns targeting the 2020 U.S. elections?

This thesis uses a framework developed by Thomas Wilhelm, a U.S. Army researcher, to evaluate Russian hybrid warfare, based on the principles of Andrei Kartapolov, a prominent Russian general. Accordingly, it is used to measure the qualitative impact of the Russian measures and American countermeasures during the 2020 U.S. elections.

This thesis finds that the Russians shifted their tactics from 2016 to 2020. Still, the U.S. government and social media companies effectively impeded their influence campaigns primarily through information sharing and account takedowns, respectively. Because the Russians will continue their influence campaigns to undermine the United States, this thesis provides recommendations to include standardized information sharing and the establishment of a national coordination center.

EXECUTIVE SUMMARY

This thesis uses a systematic framework to evaluate the qualitative effectiveness of the Russian disinformation campaigns and the countermeasures taken by the U.S. government and social media companies to combat the aforementioned campaigns targeting the 2020 U.S. elections. To develop effective countermeasures for Russian interference activities targeting future American elections, this thesis seeks to answer the following question: What impact did the measures taken by the American social media companies and the U.S. government have on Russian social media influence campaigns targeting the 2020 U.S. elections?

Russian operatives working under the auspices of a St. Petersburg-based organization, known as the Internet Research Agency (IRA), created a significant degree of the toxicity on social media during the 2016 U.S. elections.[1] The online social media influence campaign perpetrated by the Internet Research Agency aimed to fan the flames of existing divisive rhetoric, drive a wedge between the many demographic groups in America, and erode confidence in democracy.[2] Russia remains a committed adversary with influence operations continuing to this very day, posing an active threat to American democracy.[3]

Since the end of 2016, federal agencies and private sector organizations, specifically the major American social media companies, have been actively helping to safeguard political campaigns and election infrastructure from computer intrusions through increased cybersecurity and other security measures. To date, most research has focused on quantitative and qualitative analyses of the IRA's influence campaigns. However, this research has not analyzed how the Russian government perceived the effectiveness of its

campaigns. Furthermore, the efficacy of the U.S governmental and private sector actions to defend against the IRA's influence campaigns has not been systematically analyzed.

The objectives of this thesis are three-fold: (1) examining the Internet Research Agency and other Russian social media campaigns ahead of the 2020 U.S. elections to determine whether its tactics have shifted since 2016; (2) critically analyzing the private sector and U.S. government's actions to counter the Russian influence activities; and (3) proposing recommendations to safeguard future U.S. elections. The first two objectives are assessed using an analytical framework proposed by Thomas Wilhelm, Director of the U.S. Army's Foreign Military Studies Office. The results of the first two objectives, inform the last objective as well as a review of current literature by scholars and subject matter experts in different fields.

To design a helpful framework for analyzing Russian influence operations, Thomas Wilhelm surveyed the published works and speeches of General Lieutenant Andrei V. Kartapolov. Wilhelm surmised Kartapolov was one of the key architects of current Russian military science and doctrine.[4] Wilhelm believed the framework provided a well-rounded understanding of Russian martial intent and objectives about hybrid warfare from a Russian perspective.[5] Specifically, Kartapolov advocates using asymmetric, non-violent methods to undermine the strengths of Russia's opponents to achieve their strategic goals.[6]

The relevant components of the Kartapolov Framework for analyzing Russian social media-based influence operations against the United States are: (1) spreading discontent in the population; (2) exerting political pressure; and (3) confusing the political leadership.[7] This thesis uses the Kartapolov framework to conduct a qualitative evaluation of the Internet Research Agency's impact and the effectiveness of social media companies and the U.S. government's countermeasures. Specifically, it analyzes American actions to

determine their effectiveness for countering the three influence-related components of the Kartapolov Framework.

Three main themes emerged from the 2020 U.S elections. First, the Russians continued their efforts to target the U.S. elections but shifted tactics to avoid detection. Second, the social media companies, along with news media and research organizations, successfully identified and disrupted the evolving Russian disinformation campaigns. Third, the U.S. government acted more forcefully in securing the elections, primarily through its information sharing with the social media companies, political organizations, and the American public.

Despite the best efforts of the Russians, social media companies, news media, and research organizations detected, exposed, and disrupted the activities of the Internet Research Agency and other Russian-affiliated online groups. Although America's private sector may have been caught unaware during the 2016 elections, it was on heightened alert ahead of 2020, with the noteworthy efforts of American news outlets and non-governmental organizations exposing Russian disinformation activities and paving the way for the social media companies to shut down their social media accounts.

The U.S. government's response to the Russian influence campaign appeared more robust before the 2020 elections than in the 2016 or 2018 elections. The most important actions taken by the U.S. government may have been the information sharing with the social media companies to expose Russia's different operations and shut down its accounts. In addition, the U.S. government's information-sharing may have helped the social media companies secure their platforms by identifying malign Russian influence activities. The U.S. government's other responses, such as economic sanctions and indictments, provided the American public with factual narratives of the crimes perpetrated by the Russian Federation.

It took the collaborative efforts of the private sector, in the form of social media companies, researcher organizations, and news media, and the public sector, in the form of the executive and legislative branches of the U.S. government, to turn back the Putin-

sanctioned disinformation operations which were targeting the 2020 U.S. elections.[8] Ultimately, the American actions appeared effective in mitigating the Russian online tactics because voters were undeterred and turned out in record numbers for the election.

The 2021 Intelligence Community's annual threat assessment named Russia as one of "the most serious intelligence threats to the United States" and warned that the Russian government would continue its efforts to propagate dissension in the American populace.[9] Based on the evaluation of the Russian actions and the effectiveness of the American responses in the 2020 U.S. elections, this thesis makes recommendations for protecting future elections that have been drawn from experts in the U.S. government, non-governmental organizations, and academic institutions. The three types of possible actions are broadly categorized as security, transparency, and resiliency measures.[10] The proposed security measures include enhanced cybersecurity, enhanced disinformation detection, economic sanctions, information sharing, and the establishment of a fusion center. The transparency measures proposed include a public communications strategy, content labeling standards, updated political advertising and campaign finance laws, and transparent reporting. The resiliency measures suggested include improved media literacy

ACKNOWLEDGMENTS

As I write these acknowledgments, I feel a sense of relief for finishing the program, and sadness for it coming to an end. I am most grateful for all of the people who made this accomplishment possible. My primary reasons for participating in this master's program were to intellectually challenge myself and add academic rigor to all the on-the-job training I have received working on national security matters at the FBI. Both objectives were accomplished handily, thanks to the outstanding instructors and staff at the Naval Postgraduate School.

What I did not account for was undertaking this feat during a once-in-a-lifetime pandemic. While the pandemic has been an unmitigated disaster for the world, it has been a mixed blessing for me. On the one hand, I wonder how much more I would have learned from the instructors and cohort members if we were in person. Experience has taught me that some of the most valuable discussions happen between classes or during sidebar conversations. On the other hand, I have not had to travel for work since the start of the pandemic, which has allowed me to focus on my studies after work and on the weekends. I recognize these are first-world privileges and am thankful.

I was pleasantly surprised by how close I became with my cohort members though I had never met any of them physically. I am very thankful for a few of our colleagues who have helped me along this academic journey. They include Cassie, our president who has been guiding us along like a gaggle of unruly geese; the California contingent of Rich, Ben, and Heather, who have been my supportive teammates on many group projects; Rob, who is the congenial host of Not Quite the Trident Room and a steadying influence on me; Katie, who constantly challenges me and created the infamous Riesner Theory; Ron, who is my younger and intractable ideological twin; and Emily, whose youth belies her insight. To Cohort 2001/2002, I say to you, *satis esse fortis stultum*.

To the Naval Postgraduate School faculty and staff, I am filled with gratitude and thank you for your efforts during this difficult time. I can honestly say that every class challenged me, with some making me feel mentally stretched in ways I did not think were

Page 1335 of 3957

possible. First and foremost, I want to give a hearty thank you to my thesis team. Dr. Erik Dahl's acumen and discernment have focused my writing and made my thesis better. I consider you a kindred spirit in the practice of intelligence analysis and homeland security. Dr. Chris Bellavita's steadfast faith in me and support of my thesis topic has been the wind at my back. I appreciate your advocacy and use of the Socratic method to strengthen my thinking. Marianne Taflinger had the unenviable task of being my writing coach and taking the first crack at shaping my drafts so that they would be presentable to my advisors. Thank you for your patience and constructive feedback. Other instructors who have made a lasting impression on me include Branders, who rolled into class looking like a couple of Hell's Angels but spurred some of the most profound conversations I have ever had, and Paul Smith, who is the old friend in the security business that I just met this year.

To my sisters and brothers at the Federal Bureau of Investigation, I am proud to stand next to you and represent our storied organization. I appreciate the support of my superiors in allowing me to participate in this program, our supervisors who have minded the office when I am away from work, and my colleagues back at headquarters who were in the trenches with me as we worked to protect the 2020 elections. Your fidelity, bravery, and integrity motivate me to continue striving to improve myself.

To my colleagues in the private sector, I am glad that we find common cause with protecting the elections from malign foreign influence and other online threats. I have learned a great deal from you and appreciate your continued efforts to safeguard your platforms. Hopefully, we will get to see each other in person soon.

To my family, I appreciate all of your unflinching support and hope my efforts have made the world a better place in some small way. To my mother and father, thank you for instilling me with my drive for academic excellence and work ethic. To the Ochikubo and Furuya families, thank you for supporting my family and me with all of your time and energy when I decided to make a drastic midlife career change. To both of my daughters, my heart bursts with pride as I watch you grow into independent, fierce, and outspoken women who will positively impact this world in ways I have not imagined. Most importantly, I want to give the deepest thanks to my wife for all of her love, unwavering support, patience, and grace. Without her, none of my accomplishments are possible.

I. RUSSIA RISES FROM THE ASHES OF THE COLD WAR

> Over the course of my career, I've seen a number of challenges to our democracy. The Russian government's effort to interfere in our election is among the most serious.
>
> —Robert S. Mueller III, July 24, 2019

This statement from the well-respected former FBI Director underscored the severity of the Russian actions to interfere with the 2016 U.S. elections. After the end of the Cold War and the fall of the Soviet Union in 1991, Russia appeared to have faded from America's collective memory as an adversary.[1] This attitude abruptly changed on June 14, 2016, when a U.S.-based cybersecurity firm named Crowdstrike announced it had investigated intrusions into the computer networks of the Democratic National Committee (DNC) by two Russian hacking groups, code-named "Fancy Bear" and "Cozy Bear."[2] Away from the news media scrutiny, Russian operatives working under the auspices of a St. Petersburg-based organization, known as the Internet Research Agency (IRA), created a significant portion of the toxicity on social media during the presidential campaign season.[3] The "sweeping and sustained" online social media influence campaign perpetrated by the Internet Research Agency aimed to fan the flames of existing divisive rhetoric, drive a wedge between the many demographic groups in America, and erode

confidence in democracy.[4] Russia remains a committed adversary as its influence operations continue to this very day, posing an active threat to American democracy.[5]

A. PROBLEM STATEMENT

While "hack and dump" campaigns, such as the 2016 DNC attack and cyberattacks against election infrastructure, are broadly considered Russia influence operations, the Internet Research Agency's social media influence campaign directly targeted voter confidence in election integrity aimed to harm democracy.[6] As Philip Howard, an Oxford researcher, contends, a healthy democracy relies on trustworthy news media and a climate that allows for civil discourse and consensus-building.[7] The IRA's continued onslaught of fake news and amplification of inflammatory content sowed discord and confusion in the United States. For example, Hillary Clinton received damaging publicity during the campaign season in 2016 when the Main Directorate of the General Staff of the Russian Armed Forces (GRU) and Wikileaks continually leaked stolen content from the Democratic National Committee; the IRA magnified the negative image of her through its dissemination of memes and other negative content on social media platforms, which in turn politically damaged her heading into Election Day, and may have delegitimized her presidency had she been elected.[8] Russia understood that attacks against the elections

Page 1338 of 3957

struck at the heart of American democracy because this process expresses the people's will and gives the U.S. government legitimacy.[9]

Since the end of 2016, federal agencies and private sector organizations, specifically the major American social media companies, have been actively helping to safeguard political campaigns and election infrastructure from computer intrusions through increased cybersecurity and other security measures.[10] To date, most research has focused on quantitative and qualitative analyses of the IRA's influence campaigns. However, this research has not analyzed how the Russian government itself perceived the effectiveness of the campaigns in achieving their goals. Furthermore, the efficacy of the aforementioned governmental and private sector actions to defend against the IRA's influence campaigns has not been studied much in a methodical fashion. This thesis seeks to use a systematic framework to evaluate the qualitative effectiveness of the Russian disinformation campaigns and the countermeasures taken by the U.S. government and social media companies to combat the aforementioned campaigns targeting the 2020 U.S. elections. In summation, Russian influence operations' continual assault will weaken American democracy over the long term if not effectively countered.

B. RESEARCH QUESTION

To develop effective countermeasures for Russian interference activities targeting future American elections, this thesis seeks to answer the following question: What impact did the countermeasures taken by the American social media companies and the U.S. government have on Russian social media influence campaigns targeting the 2020 U.S. elections?

C. LITERATURE REVIEW

This literature review analyzes the leading scholarly and expert debates on the Internet Research Agency and other Russia-backed social media activities targeting the U.S. elections from 2014 to 2020, the countermeasures taken by American social media companies and the U.S. government, a framework for understanding the objectives of Russian hybrid warfare, and the recommendations to counter Russian influence activities provided by subject matter experts in a variety of fields. Russian influence campaigns, known as "active measures," have been in existence since the inception of the Soviet Union over 100 years ago.[11] Prior research in this topic drew primarily from the ranks of history, political science, public policy, and international studies. An extensive survey of the current academic literature indicates that the types of researchers drawn to the field of foreign influence campaigns have recently broadened due to the Internet Research Agency's success in employing social media platforms to conduct influence campaigns targeting the 2016 U.S. elections. Presently, scholarly analyses also come from researchers in the fields of computer science, data analytics, and communications. This thesis attempts to evaluate the efficacy of the aforementioned actions to determine if finetuning or a wholesale change in tactics is required to counteract future Russian influence campaigns.

The literature review will be comprised of four parts. The first part examines the studies of Russian online influence campaigns from 2014 to 2020. The sources for this topic include reports and papers by the U.S. government, think tanks, private research firms, academic researchers, and news media. The second part examines the documents which analyze or disclose countermeasures taken by the American social media companies, specifically Facebook, Google, and Twitter, and the U.S. government. The sources include government reports and statements, academic research papers, private research firm reports, think tanks papers, the social media companies' transparency reports, and news media reporting. The third part examines a framework for understanding the objectives of Russian hybrid warfare. The sources primarily include articles and research papers from academic and military institutions. The fourth part examines recommendations for

Page 1340 of 3957

countering future Russian online influence campaigns. The sources for this topic include Congressional reports, think tank papers, academic research papers, and private research companies' reports. The literature review has revealed an abundance of source materials covering the activities surrounding the 2016 and 2018 U.S. elections. At the time of this thesis, there have not been many scholarly works published examining Russia's interference against the 2020 U.S. elections.

1. Russian Online Influence Activities from 2014 to 2020

Groups of investigators and scholars provide a critical review and analysis of Russian online influence activities and tactics vis-à-vis the 2016 U.S. election. The U.S. Intelligence Community Assessment (ICA) issued in January 2017 encapsulated the Executive Branch of the U.S. government's consensus judgment that the Russian Federation endeavored to erode public confidence in the U.S. elections and favor one presidential candidate over another.[12] Since that ICA was published, an abundance of literature into the IRA's 2016 to 2020 activities has been written by governmental entities, non-governmental organizations, and academic researchers.

Both the U.S. government's executive and legislative branches conducted investigations into the Russian interference in the 2016 U.S. elections, which included the IRA's social media campaigns. The foundational work detailing the IRA's actions during this timeframe may be the 2019 report from Robert Mueller III, the former FBI Director appointed by the Department of Justice as the Special Counsel to investigate Russian interference in the 2016 U.S. elections.[13] This report resulted from approximately two years of work by the Special Counsel's Office and the analysis of a multitude of evidence collected through legal processes and interviews.[14] Mueller and his team had two main findings regarding the Russian influence campaign. First, the report found that the IRA's

[12] Office of the Director of National Intelligence, *Assessing Russian Activities and Intentions in Recent U.S. Elections: The Analytic Process and Cyber Incident Attribution* (Washington, DC: Office of the Director of National Intelligence, 2017), 7, https://www.dni.gov/files/documents/ICA_2017_01.pdf.

Page 1341 of 3957

social media campaign aimed to sow discord in the U.S. elections but pivoted to favoring Donald Trump when it became apparent he would be the Republican presidential nominee.[15] Second, Mueller's team concluded that the hack and dump attack against the DNC was intended to harm Hillary Clinton's presidential campaign.[16]

The intelligence committees for both houses of Congress also issued reports regarding Russian interference in the 2016 U.S. elections. Of the two, the U.S. Senate Select Committee on Intelligence (SSCI) report had bipartisan approval from the committee members when it was published. Its findings coincided with the Special Counsel's report.[17] The U.S. House Permanent Select Committee on Intelligence (HPSCI) report was issued by the Republican majority over the Democratic committee members' dissent. The HPSCI majority and minority reports concluded that the Russians had interfered with the elections through the cyberattack against the DNC and the IRA's social media campaigns.[18] The majority report neglected to mention that these two operations were intended to damage the Clinton campaign and favor the Trump campaign, whereas the minority report highlighted the majority's omission and suggested partisan politics explained the omission.[19]

In August 2020, the State Department's Global Engagement Center published a report, which exposed Russia's current disinformation strategy and tactics.[20] Though the report did not address the Russian activities targeting the 2016 U.S. elections, it described

Page 1342 of 3957

Russian online influence operations, the online ecosystem that Russia was aiming to cultivate, and framed the IRA's current activities as a continuation of the Russian active measures strategy.[21] The State Department and Special Counsel's Office reports, coupled with the Congressional intelligence committee reports, represented the U.S. government's understanding of Russian disinformation strategy in general and the IRA's role within the broader Russian influence enterprise.

In March 2021, the Office of the Director of National Intelligence (ODNI) issued an unclassified version of the intelligence community assessment summarizing foreign state-sponsored threats to the 2020 U.S. elections.[22] In particular, the ODNI's report provided a succinct but comprehensive overview of the Russian influence campaign, which focused on damaging the Biden presidential campaign and favoring the Trump campaign.[23] In April 2021, the ODNI issued an unclassified version of the Intelligence Community's annual worldwide threat assessment, highlighting Russian influence operations as a persistent threat to the United States.[24] Reporting from the ODNI represents the collective efforts of all 18 organizations which comprise the U.S. Intelligence Community.[25]

Another corpus of literature written by non-governmental and academic researchers tended to be more quantitively detailed in its findings of the IRA than governmental counterparts as they delved into statistical analyses of social media activities. Researchers from the New Knowledge private research firm, now known as Yonder, conducted a comprehensive analysis of the IRA's activities in 2016 and authored a report at the request

Page 1343 of 3957

of the Senate Select Committee on Intelligence.[26] Renee DiResta and her colleagues conducted a highly detailed qualitative and quantitative analysis of all the social media data submitted to SSCI by Facebook, Google, and Twitter. The data encompassed the IRA's activities from about 2015 to 2018. Their findings regarding the intent of the IRA's social media campaign and the cyberattack against the DNC aligned with the Special Counsel's and SSCI's reports.[27] DiResta et al. go beyond the government reports' findings and conclude that the Russians actively attempted to suppress voter turnout, especially among black voters, and foment insurrectionist sentiment against different levels of American government.[28]

Philip Howard, a University of Oxford researcher, also had the opportunity to analyze the aforementioned social media data provided to SSCI. Howard and his colleagues conducted a statistical analysis of the social media data, to include an in-depth examination of the IRA's strategy and tactics.[29] Howard, who along with Samuel Woolley, had previously coined the phrase "computational propaganda" to describe the IRA's cyber covert operation activities, also found that the IRA's social media campaign was designed to interfere in the 2016 U.S. elections, specifically favoring Trump over Clinton.[30] Their report went further than prior research by describing the specific targeting of different demographic groups to elicit particular responses; i.e., promoting right-wing turnout for Trump, discouraging black voters from voting or civic engagement, and amplifying the differences between the ideologically progressive and conservative.[31]

Page 1344 of 3957

More recently, Robert Walker examined the IRA's online activities in his 2019 master's thesis at the Naval Postgraduate School.[32] His work's primary focus was to evaluate the purpose and impact of the IRA's social media content, coming to the same conclusions as his predecessors.[33] Unlike the previously mentioned researchers, Walker also examined the countermeasures taken by private sector companies and the U.S. government from 2016 to 2018 to assess their impact and found them to be partially effective.[34] These researchers did not have the same political considerations or constraints as governmental investigators to examine and make qualitative judgments about the intent of the IRA's activities and motivations.

Despite a broad agreement within the United States that the Russians attempted to interfere in the 2016 U.S. elections, some conservative American media have disputed the impact these efforts had on the election outcome. In a *New York Magazine* article, Margaret Hartmann, senior editor, stated, "the general consensus is that liberals are overstating the significance of Russia's alleged meddling in an effort to shift the blame for their loss from Hillary Clinton, and undermine Trump's presidency."[35] A 2018 poll taken by British marketing research firm YouGov found that only 37% of Republicans believed Russia interfered with the 2016 U.S. elections.[36] This researcher's extensive literature search could not find any scholars, private research organizations, or prominent conservative think tanks who had authored papers discussing the Russian interference in the 2016 U.S. elections, the Internet Research Agency's social media activities, or policy recommendations for countermeasures. The negative results of this query suggest that this topic did not rate as relevant to these organizations.

Page 1345 of 3957

2. Countermeasures by the Private Sector and the U.S. Government

The Internet Research Agency appeared to conduct their influence activities undetected on the major social media platforms, specifically those belonging to Facebook, Google, and Twitter, before and during the 2016 U.S. elections.[37] Thus, the social media companies did not pursue any policy changes or take any actions to thwart the influence campaign. In October 2016, the Department of Homeland Security (DHS) and Office of the Director of National Intelligence publicly blamed the Russian Federation for hacking the Democratic National Committee.[38] Subsequently, the FBI and ODNI issued a joint analysis report (JAR), providing more details to the previously published joint statement.[39] The JAR attributed the 2016 DNC hack to two Russian hacking groups, known as APT28 and APT29, and provided technical details to allow organizations to safeguard themselves from these types of computer intrusions.[40] Typically, the U.S. government does not publicly disclose foreign actors' tradecraft because it can reveal sensitive sources and methods used to acquire this information. Likely, the significance of the DNC hack and public pressure prompted the U.S. government to supplement its initial October 2016 statement.[41]

During the time frame after the 2018 U.S. elections and before the 2020 U.S. elections, private research firms and academic research centers played a more prominent role as the social media companies decided to partner with them. These research

organizations were pivotal in identifying the Internet Research Agency's activities and its various influence campaigns. The two noteworthy organizations were Graphika and the Stanford Internet Observatory. In 2020, Graphika issued a series of reports that exposed Russian influence operations' activities across different platforms. The organization coordinated with the social media companies that shut down IRA-controlled accounts. It discovered that the IRA had made fake left-wing and right-wing news sites to amplify the existing discourse on hot-button topics, such as governmental corruption, gun control, and racial discrimination.[42] The Graphika researchers concluded that the IRA made these sites to help them target people through their ideologies, similar to their tactics in 2016.[43] The Stanford Internet Observatory was led by Alex Stamos, formerly Facebook's Chief Security Officer, and Renee DiResta, one of the researchers retained by SSCI to investigate Russian interference in 2016. The Stanford Observatory collaborated with the social media companies to identify Russian influence campaigns, which the companies would subsequently disrupt through account takedowns and content removal.[44] The Stanford researchers identified influence operations conducted by the GRU and IRA in Africa, which mostly followed prior Russian influence campaign tactics.[45] These two instances showed the social media companies partnering with different research organizations to identify and disrupt various foreign influence campaigns, likely to avoid duplicating efforts and spread the workload.

3. Framework for Understanding Russian Hybrid Warfare

The concept of Russian hybrid warfare was devised by Western experts around 2014 to describe Russia's use of conventional military force and unconventional means, specifically cyberattacks and information operations, in its incursions into Crimea, Eastern Ukraine, and Syria.[46] A review of current literature determined that the Russian military officers who are believed to have contributed the most to the Russian hybrid warfare concept were General Valery Gerasimov, Chief of the Russian Federation's General Staff, Lieutenant General S. A. Bogdanov, a retired General Staff officer, and Lieutenant General Andrei V. Kartapolov, currently Russia's Deputy Minister of Defense and the former head of the Russian General Staff's Main Operational Directorate.[47] Of these individuals, Gerasimov was most widely attributed to have created modern Russian hybrid warfare because of a heavily cited article he wrote in February 2013 to describe his thoughts on 21st-century wars.[48] In 2014, a British researcher, Mark Galeotti, coined the term "The

Gerasimov Doctrine" to encapsulate this evolution in Russian military thinking.[49] Over the next five years, the Gerasimov Doctrine was referenced or cited in hundreds of scholarly works.[50] In 2019, Galeotti gave a mea culpa when he clarified that the term was meant to be a placeholder for the changing thoughts about Russian military strategy.[51] Galeotti pointed out that Gerasimov was a career armored division officer and not considered a military science theoretician.[52] Other Russian experts also dismissed the Gerasimov Doctrine as a model for understanding how Russia incorporated information operations into its conventional warfare strategy.[53]

Like Gerasimov, Lieutenant General Bogdanov and a colleague wrote an article about hybrid warfare called the "New Generation War."[54] In this article published in February 2013, Bogdanov discussed the need for information technology and information operations superiority, as it perceived the United States and other Western countries were already using technology-enabled psychological warfare to target Russia.[55] Bogdanov believed these information operations could internally undermine a country's ability to govern and leave it vulnerable to conventional military force.[56] However, since the publication of that article, Bogdanov has not mentioned the term "New Generation War" in his subsequent articles.[57] Later on, Bogdanov would use a different term for hybrid warfare, popularized by Lieutenant General Kartapolov.[58]

In 2015, Lieutenant General Kartapolov published an article and gave a speech at the Russian Academy of Military Science about hybrid warfare, which he described as "New-Type Warfare."[59] Specifically, Kartapolov discussed using asymmetric means, such as cyber operations and other forms of political pressure, to weaken an adversarial state's military strength.[60] What differentiates Kartapolov from Gerasimov and Bogdanov was the specific manner in which he laid out the elements for successfully waging New-Type Warfare.[61] Multiple Western scholars consider Kartapolov's article and speech to be a roadmap for the current Russian military thought and practice of hybrid warfare.[62] Figure 1 shows a graphic from the Kartapolov article, which describes the tactics for conducting a New-Type War. In particular, Thomas Wilhelm, an American military scholar, has devised a framework for understanding Russian influence operations based on his analyses of multiple works by General Kartapolov, which will be discussed in further detail in the Research Design section of this thesis.[63]

4. Recommendations for Countering Russian Influence Campaigns

Recommendations for countering Russian malign influence operations primarily come from three sectors: (1) the U.S. government, (2) non-governmental organizations such as think tanks, and (3) researchers affiliated with academic institutions. The intelligence committees for both houses of Congress provided recommendations in the reports, which summarized their investigations of Russian interference in the 2016 U.S. elections. The House Permanent Select Committee on Intelligence report's recommendations focused on information sharing between election-related stakeholders, improved cybersecurity for election information infrastructure, and potential legislative actions to enhance cybersecurity.[65] The Senate Permanent Select Committee on Intelligence report's recommendations discussed the Executive Branch using a suite of deterrents to dissuade foreign influence in U.S. elections, such as sanctions, diplomatic pressure, and cyber operations, enhanced cybersecurity measures for election

[65] H.R., *Report on Active Measures*, 120–22.

infrastructure, and replacing outdated election equipment.[66] All of these recommendations may broadly be characterized as security measures.

Like the Congressional reports, various policy think tanks have proposed a series of recommendations to counter Russian influence campaigns. The RAND Corporation suggested a three-pronged set of activities: (1) targeting the Russian government through sanctions, diplomacy, and pro-democracy programs; (2) identifying and disrupting the activities of the Internet Research Agency and other proxies through information sharing and improved detection technologies; and (3) disrupting the effectiveness of social media amplification channels through technology enhancements and policy changes.[67] Similar to the third prong of RAND's recommendations, the German Marshall Fund was highly focused on improved transparency through better information-sharing between companies and better labeling state-sponsored content.[68] Looking at the environment from a more holistic perspective than RAND or the German Marshall Fund, the Belfer Center advocated for a national strategy for countering information operations, to include increased transparency to attribute and reveal Russian influence operations, leveraging all facets of the U.S. government to disrupt these operations, increased engagement with allies to counter influence operations, and better cooperation between the U.S. government and social media companies.[69] In contrast to the other organizations, the Belfer Center also advocated for improved media literacy in the nation's education system.[70] In summary, the writers' consensus viewpoint from the literature review is that enhanced security, transparency, and resiliency are crucial to combating malign Russian influence in elections.

As another group of outside observers of social media influence campaigns, academic researchers provided practical proposals based on their analysis of the IRA's

Page 1352 of 3957

tactics and activities. These proposals may have added weight because they are in peer-reviewed publications. Both DiResta and Howard's academic research teams, from Stanford University and Oxford University respectively, provided wide-ranging proposals involving collaboration between relevant stakeholders to counter current and future Russian influence campaigns.[71] These recommendations included information sharing between private sector companies and the government, better policing and content moderation by the social media companies, and critically thinking about how future technologies can influence campaigns.[72]

In contrast to DiResta and Howard's teams, researchers from the Harvard Kennedy School concentrated their recommendations on social media companies.[73] Specifically, the Harvard researchers focused on policy improvements for the social media companies concerning increased transparency for taking down content, better content moderation, labeling state-sponsored content, providing links to reliable sources of information, and focusing on their users' rights and privacy.[74] Kate Starbird, a University of Washington researcher, agreed on the critical nature of better content moderation by the social media companies but expressed concern about the potential curtailment of free speech.[75] In a completely different vein, Canadian researchers Barry Cartwright et al. believe advanced

Page 1353 of 3957

technology, specifically artificial intelligence, will be vital for detecting and combating foreign influence campaigns.[76]

A review of the literature revealed some trends among the different sectors, which provided recommendations. The Congressional recommendations focused on security measures such as enhanced cybersecurity, economic sanctions, and cyber operations.[77] The think tank recommendations ran the gamut from security measures similar to Congressional recommendations to transparency measures, such as promoting public communications about disinformation campaigns by the U.S. government, to resilience measures, such as improved media literacy.[78] Academic literature generally supported the same security, transparency, and resiliency measures favored by think tanks and public policy organizations.[79]

5. Conclusions from Literature Review

A review of all the relevant literature makes clear that Russia has and will continue to persist as an adversarial nation-state seeking to destabilize American democracy. The current online influence campaigns being conducted by Russian actors are an extension of Soviet-era psychological warfare operations, amplified by 21st-century social media platforms. The sources providing recommendations to counter these malign influence operations include academia, private sector, government, think tanks, and other non-

Page 1354 of 3957

governmental organizations. The variety of sources and input indicates that a whole-of-society approach utilizing a range of security, transparency, and resiliency measures will be necessary to combat Russian influence operations.

D. RESEARCH DESIGN

The objectives of this thesis are three-fold: (1) examining the Internet Research Agency and other Russian social media campaigns ahead of the 2020 U.S. elections to determine whether its tactics have shifted since 2016; (2) critically analyzing the private sector and U.S. government's actions to counter the Russian influence activities; and (3) proposing recommendations to safeguard future U.S. elections. The first two objectives will be assessed using an analytical framework proposed by Thomas Wilhelm, Director of the U.S. Army's Foreign Military Studies Office. The last objective will be informed by the results of the first two objectives, as well as a review of current literature by scholars and subject matter experts in different fields.

To design a useful framework for analyzing Russian influence operations, Thomas Wilhelm surveyed the published works and speeches of General Lieutenant Andrei V. Kartapolov. Wilhelm surmised Kartapolov was one of the key architects of current Russian military science and doctrine, specifically the aforementioned "New-Type War."[80] Wilhelm believed the framework provided a well-rounded understanding of Russian martial intent and objectives about hybrid warfare through a Russian perspective.[81] Specifically, Kartapolov advocates utilizing asymmetric, non-violent methods to undermine the strengths of Russia's opponents to achieve their strategic goals.[82] Kartapolov highlighted ten components for conducting hybrid warfare, herein referred to as the Kartapolov Framework: (1) spreading discontent in the population; (2) exerting political pressure; (3) confusing the political leadership; (4) use of new and advanced weaponry; (5) train and arm opposition forces; (6) utilization of special military forces

[80] Tom Wilhelm, "A Russian Military Framework for Understanding Influence in the Competition Period," *Military Review* (2020): 35.

Page 1355 of 3957

behind enemy lines; (7) commit large scale subversive acts to destabilize to the enemy; (8) shift to conventional warfare after softening the enemy; (9) destroy the enemy and seize territory concurrently; and (10) use airstrikes and artillery to destroy any focal points of resistance to establish complete control of the territory.[83]

The relevant components of the Kartapolov Framework for analyzing Russian social media-based influence operations against the United States are: (1) spreading discontent in the population; (2) exerting political pressure; and (3) confusing the political leadership.[84] This thesis will use the Kartapolov framework to conduct a qualitative evaluation of the Internet Research Agency's impact and the effectiveness of social media companies and the U.S. government's countermeasures. To assess the social media companies and the U.S. government's actions to counter Russian influence activities, this thesis will also employ the Kartapolov framework. Specifically, the American actions will be analyzed to determine their effectiveness for countering the three influence-related components of the Kartapolov Framework. In particular, a qualitative analysis will evaluate American efforts to counter the spread of discontent in the American populace, defuse political pressure, and stop confusion in political leadership. The analysis will be dependent on publicly available information.

The review of the private sector countermeasures to the IRA's influence campaign will be based on examining three sources of information. Private sector actions, specifically those of the "Big Three" social media companies of Facebook, Google, and Twitter, are tracked and reviewed by academic researchers and non-governmental organizations.[85] These two groups write reports or papers based on their findings. An example of this type of information is a recently published paper examining Twitter's account suspensions related to the 2020 U.S. elections by researchers from the University of New Mexico and

[83] Kartapolov, "Lessons of Military Conflict, Perspectives on the Development of the Related Forms and Methods," 35.

Page 1356 of 3957

the Georgia Institute of Technology.[86] The social media companies have also regularly made public announcements of their actions to combat foreign influence activities. These types of information will be used to assess the impact of the private sector's countermeasures.

The review of U.S. government countermeasures will rely only on publicly available, unclassified information. Although classified reporting on U.S. government actions likely exists, these sources will fall outside this thesis's scope. In certain instances, different facets of the U.S. Government generates unclassified reports, such as those produced by the different committees in Congress or various executive branch agencies. In other circumstances, the U.S. government will make public statements or unseal legal documents such as indictments or arrest affidavits. On occasion, the news media will also leverage their sources to reveal U.S. government actions. These types of information will be used to assess the impact of the U.S. government's countermeasures.

Recommendations for safeguarding future U.S. elections will be informed by the aforementioned analyses of actions taken by the private sector and the U.S. government and a review of advice provided by subject matter experts in various fields. These experts comprise academic scholars, researchers from non-governmental organizations, and U.S. government officials from both the legislative and executive branches. The diverse experiences and perspectives should provide a robust set of recommendations for a whole-of-society approach to secure elections.

In summation, the examination of the Internet Research Agency's social media campaigns ahead of the 2020 U.S. elections will rely primarily on exploring literature produced by four groups: academic researchers, non-governmental research organizations, reports from the social media companies, and U.S. government investigatory reports. Although offering different perspectives, these subject matter experts provide the most reliable analysis and assessment of the Russian influence activities.

II. OPENING MOVES – SCOPE AND BACKGROUND

> We're all targets of a sophisticated and capable adversary and we must engage in a whole-of-government approach to combat Russian active measures.
>
> — Richard Burr, March 30, 2017

In the Russian Federation, President Vladimir Putin, who has been in power since 2000, makes every major decision.[87] As a former senior-level KGB officer, Putin holds antagonistic views of liberal democracies in general and the United States in particular.[88] Michael McFaul, former U.S. Ambassador to Russia, assessed that Putin sees the United States as "a hostile power and a serious threat to Russian national interests."[89] As such, Putin perceives himself to be in an ideological struggle "between conservative, Christian, sovereign values—which he embraces—and decadent, liberal, multilateral ideas championed by many Western governments, including first and foremost the United States."[90] Harkening back to Soviet-era information operations, Putin recognized the advent of online social media platforms as an avenue to target U.S. elections.[91] The Russian influence operations started before the 2016 U.S. elections and continued through the 2020 U.S. elections.

Before delving into the nuances of the Russian online social influence campaigns targeting the 2020 U.S. elections, this chapter outlines the scope of the issue to be studied in this thesis, the recent history motivating these influence campaigns, a review of Russian and American measures during the 2016 and 2018 U.S. elections, and an analysis of the effectiveness of these measures using the Kartapolov Framework.

A. SCOPE OF THESIS

The current Russian information operations targeting U.S. elections can trace their roots to Soviet-era propaganda and disinformation campaigns.[92] Because of the immense longevity and scale of these Russian information operations, it is essential to frame what will be discussed within the confines of this thesis. The critical components to be bounded are time periods covered, types of influence operations, and the social media platforms to be examined.

1. Relevant Time Periods

On March 30, 2017, Eugene Rumer, Senior Fellow at the Carnegie Endowment for International Peace, testified before the Senate Select Committee on Intelligence and described active measures as a century-old suite of information warfare tools continuously being used by Russia to advance its ideological objectives and erode the stability of its liberal democratic rivals.[93] The use of disinformation campaigns, i.e., intentionally propagating false or misleading information, is one of the primary tools in their portfolio.[94] Soviet-era active measures evolved and are now "enabled by technology and adapted for a globalized world, their modern incarnations are much more sinister, with far greater range and speed – and, through the Internet, able to influence popular opinion on a scale never before possible."[95] However, it was only around the 2016 U.S. elections when the Russians deployed these large-scale online disinformation campaigns against the American democratic system.[96] Therefore, this thesis will focus on Russian activities from three distinct periods: (1) preceding and during the 2016 U.S. elections, (2) after the 2016 U.S. elections to preceding the 2018 U.S. midterm elections, and (3) after the 2018 U.S. midterm elections to the 2020 U.S. elections.

2. Types Of Russian Influence Operations

The Russian influence operations directed at the 2016 U.S. Presidential elections are broadly divided into three categories, the last of which will be within the scope of this thesis.[97] The first category is "hack and dump," wherein Russian hackers breached the DNC computer networks, stole data, and then disseminated it via different online platforms such as WordPress, Twitter, and Wikileaks.[98] The second category is attempted hacks on the actual voting systems in each state. The systems include voter registration databases and online polling equipment. The last category, as described by researchers from New Knowledge, is the "sweeping and sustained" online social media influence campaign perpetrated by the Internet Research Agency "consisting of various coordinated disinformation tactics aimed directly at U.S. citizens, designed to exert political influence and exacerbate social divisions in U.S. culture."[99]

Online social media influence campaigns conducted by the Internet Research Agency and other Russian-backed organizations will be the focus of this thesis because they have a significant and continuing impact on Americans and democracy. In contrast, the other two types of Russian influence operations, focused on political campaigns and election infrastructure, are only germane to Americans every two years during election seasons. Since the 2016 election, federal agencies and private sector organizations have been actively helping to safeguard political campaigns and election infrastructure from computer intrusions through increased cybersecurity and other security measures. Arguably, campaigns and election systems are better protected now than they were in 2016. Though regularly occurring on a biennial basis, American engagement with the electoral process is little compared to their daily, and sometimes hourly, social media engagement.

In 2019, about 70 percent of all Americans had at least one social media account and used the Internet between 30 minutes to two hours per day.[100] This statistic means the

Page 1361 of 3957

IRA has daily opportunities to reach out to Americans via social media newsfeeds or posts. Due to First Amendment constraints, federal agencies have little involvement in Americans' usage of social media. Couple this with the fact that social media companies have a vested interest in keeping American users on their platforms. For the most part, Americans are left to fend for themselves on social media platforms.

Research has shown mixed results regarding people's usage of social media. On the one hand, social media usage positively correlates with increased political engagement.[101] On the other hand, users tend to stay on social media platforms longer when engaged with content that conforms to their own opinions, whether factual or not.[102] The social media companies understand this phenomenon and finetune their algorithms to keep feeding content they think users want.[103] The IRA could take advantage of this behavior by inserting itself into the social media ecosystem and working to sow discord and erode the American public's trust in democratic institutions.

3. Targeted Social Media Platforms

Despite a vast array of social media platforms, Russians primarily targeted these three of the four most visited ones: #1 – YouTube, a Google subsidiary, #3 – Twitter, and #4 - Facebook.[104] Wikipedia is the #2 most visited website, but not a social media platform and heavily moderated, unlike the other sites.[105] Whereas previous studies focused on discrete periods around a single election (2016, 2018, or 2020), this thesis will review and analyze Russian activities across the entire time when the IRA and other Russian-backed groups have targeted the United States with its social media influence campaigns. The term,

private sector companies, will refer to the three companies whose social media platforms were the most heavily used by the Russians for their influence operations. Understanding the IRA's activities across this period may reveal the efficacy of actions taken by the private sector companies and the U.S. government in response to the IRA's efforts.

B. RECENT HISTORY – THE CAMPAIGNS FROM 2016 TO 2018

Around 2014, Putin tapped his close ally Yevgeniy Prigozhin to conduct influence operations against the American public.[106] Prigozhin, recognized as "Putin's Chef," is a Russian oligarch who owns a conglomerate known as Concord Management, with subsidiaries in various businesses, including catering.[107] Project Lakhta is the umbrella term for Prigozhin-owned firms focused on domestic and overseas influence operations. By September 2016, the monthly operating budget of Project Lakhta was the equivalent of $1.25 million.[108] One of the businesses under Project Lakhta is the Internet Research Agency, founded around 2013 in St. Petersburg, Russia, to be a sophisticated marketing and influence firm. Organized like a legitimate business, its management group oversees various departments, including finance, information technology, search engine optimization, data analysis, and graphics.[109] Before targeting Americans, IRA employees engaged in around-the-clock influence operations directed at Russian and Ukrainian citizens.[110] In April 2014, a new department called the "Translator Project" was formed to conduct online activities against Americans on the American social media platforms of Twitter, Facebook, Instagram, and YouTube.[111] By July 2016, IRA assigned more than 80 employees to the Translator Project.[112] These machinations showed the Russian

Federation's commitment of personnel and resources to pursue this type of covert online campaigning.

President Putin's initial strategy appeared to be inflaming the existing discord in the American populace and eroding public confidence in American institutions such as free speech and the electoral process. Still, that strategy evolved as it became clear who the nominees would be. By June 2016, Hillary Clinton was the presumptive Democratic nominee and frontrunner for president. Putin was known to despise Clinton during her tenure as Secretary of State during the Obama Administration.[113] She seemed to be the ideological opposite of Putin. Clinton believed in multilateral international cooperation, wanted to strengthen NATO, desired increased sanctions for Russia's occupation of Crimea, and advocated for fair elections and greater freedoms within Russia.[114] Putin may have sensed that Donald Trump's rise as a legitimate candidate offered an avenue to advance his anti-American agenda. Putin's strategy evolved as the presidential campaign season continued through the summer, supporting Trump as its centerpiece.[115] The Russian covert influence operation pivoted to helping the Trump campaign, in addition to its continued efforts to tear down the Clinton campaign.[116] An IRA-purchased political advertisement on Facebook reflected its efforts to target Clinton in Figure 2. This behavior showed the adaptability of the Russians to make use of contemporaneous events for their advantage.

1. What Happened During the 2016 U.S. Elections?

The Russian influence campaigns utilizing American social media platforms started around 2013 and extended through the 2016 U.S. elections.[118] Reviewing the Russian measures and the countermeasures taken by the private sector companies and the U.S. government during this time sets up the baseline for comparison to the Russian and American activities during the 2020 U.S. elections. Moreover,

[117] Source: "HPSCI Minority Open Hearing Exhibits," Permanent Select Committee on Intelligence, accessed March 20, 2021, https://intelligence.house.gov/hpsci-11-1/hpsci-minority-open-hearing-exhibits.htm.

examining these actions across three separate elections may reveal trends and evolutions in tactics by the Russians and Americans.

a. The IRA's Social Media Activities

Before the 2016 U.S. Elections, the Internet Research Agency's influence operations against the American public encompassed three lines of effort. First, IRA employees made and maintained fake user accounts and pages on social media platforms that covered a range of political issues.[119] For these accounts and pages, the IRA employees generated organic content to ingratiate themselves with online communities and amplify or steer the themes discussed in these communities. Second, IRA employees used social media bots, i.e., computer programs which control social media accounts, to amplify existing content.[120] Third, IRA employees covertly purchased online advertisements from social media companies to enhance their organic content and drive online traffic to sites controlled by them.[121] In the marketing world, advertisements are known as "paid content." In contrast, organic content refers to unpaid messaging generated by people that helped foster support for a product or brand through voluntary and spontaneous recommendations by users.[122] Although the IRA employees were being paid, they impersonated regular users on the social media platforms so their messaging could look authentic. Ironically, Russians masqueraded as Americans and weaponized free speech to foment division and corrode Americans' faith in such speech.

For the first line of effort, the IRA managed its influence operations like a digital marketing campaign.[123] It created false personas and imitated activist groups on the left and right sides of the political spectrum. These personas and groups extended across

[123] DiResta et al., *The Tactics & Tropes of the Internet Research Agency*, 6.

multiple social media platforms.[124] Philip Howard, University of Oxford researcher, opined that "users were more likely to assume the credibility of the false organizations set up by the IRA with a presence across multiple platforms, operating websites, YouTube channels, Facebook pages, Twitter accounts, and even PayPal accounts set up to receive donations."[125] Viewers believed these were legitimate because of the extraordinary efforts the personas and groups had taken. To finetune its messaging, IRA employees visited the United States in 2014 to learn about American culture, gather intelligence, and take photographs later used to enhance the authenticity of their false online personas.[126] The care the IRA took showed its deep commitment and calculation in its endeavors to harness American-style free speech to undermine trust in democracy.

When reviewing the IRA-generated Facebook content, some themes emerge. First, on the left end of the political spectrum, the IRA's efforts targeted minority groups to suppress voter turnout.[127] Topics of messaging included anti-government rhetoric, boycotting the election, following the wrong voting procedures, and scaring voters from showing up at polling locations.[128] Figure 3 illustrates an example of IRA-purchased political advertisements on Facebook with anti-government messaging targeting black voters. Second, on the right end of the political spectrum, the IRA promoted conspiracy theories, stopping legal and illegal immigration, protecting gun rights and religious freedom, and other relevant issues for conservatives (see Figure 4).[129] Again, the efforts were presumably targeting conservatives to drive up voter turnout.

Page 1367 of 3957

Figure 3. Facebook Political Ads Targeting Black voters.[130]

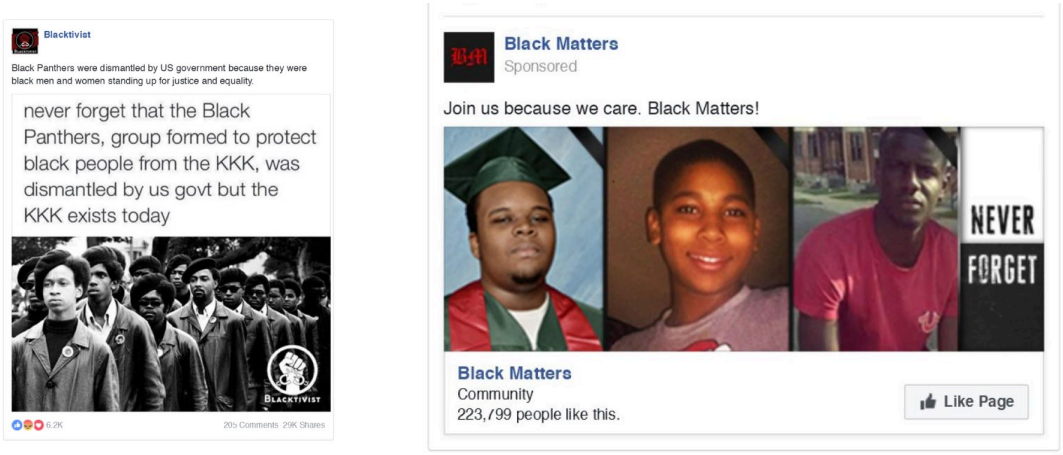

Figure 4. Facebook Political Ads Targeting Right-Wing Voters.[131]

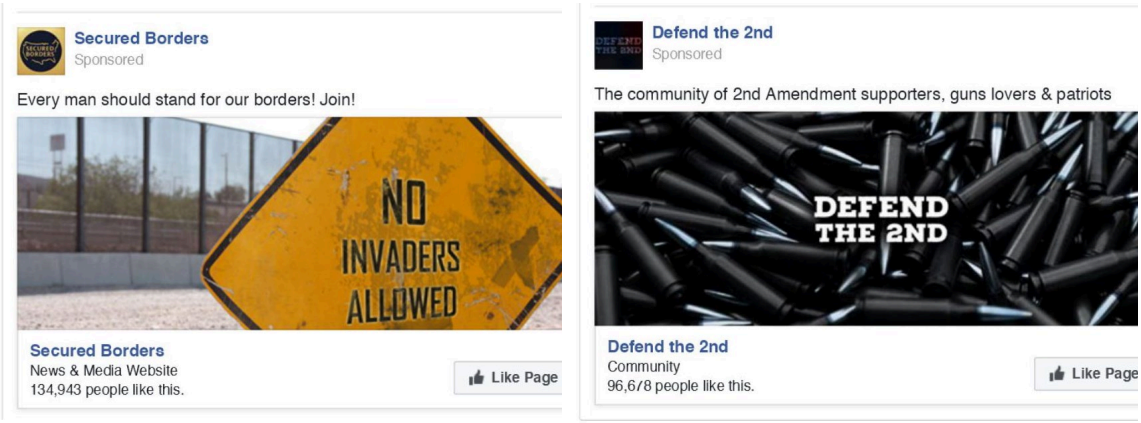

The ratios of IRA-generated content on Facebook changed through the course of 2016. In the first half of 2016, over half of all the most active IRA-made Facebook accounts targeted right-wing audiences with posts discussing the topics referenced above.[132] This phenomenon happened before Trump had won the Republican presidential nomination. Explicit mentions of Trump increased by mid-2016 after he secured the nomination and

Page 1368 of 3957

focused on amplifying the anti-immigrant rhetoric, which was a hallmark of the Trump campaign.[133] Howard summed up his analysis by stating it was "clear that the IRA sought to energize conservatives around Trump's campaign and encourage the cynicism of other voters in an attempt to neutralize their vote."[134] Howard's examination concluded that the Russians sought to elicit specific behavior, namely encouraging right-wing voters to turn out for Trump and discouraging left-wing and minority voters from going to the polls.[135]

A review of Twitter activities in 2016 showed similar behavior to the IRA's activities on Facebook.[136] In further support of the idea that the IRA treated its influence operations as a marketing campaign, Josephine Lukito, a University of Wisconsin researcher, observed the IRA posting messages on Reddit before similar messages appeared on Twitter.[137] Lukito assessed that the IRA could have been using Reddit to test message resonance before deployment to Twitter.[138] From July 2, 2015 to May 31, 2017, there were about 1.9 million tweets but only 12,603 Reddit posts.[139] Lukita noted that "Twitter's centrality to the IRA's campaign may also explain why more content was produced on Twitter relative to Reddit."[140] Lukita suggested that Reddit's usage may have been a "trial balloon" and opined it could be evidence of the IRA treating their social media influence operation like a marketing campaign.[141] One of the campaign's central goals appeared to be influencing voter turnout during the elections, which was similar to what Philip Howard had concluded.[142]

In contrast to the IRA activities on Facebook and Twitter, the YouTube videos provided by Google to the Senate Select Committee on Intelligence revealed that most of them were used to target African Americans.[143] It is unclear why the IRA chose this platform to target African Americans specifically. However, because Google provided only a limited amount of data for public research, making any general conclusions regarding IRA activities on Google's platforms is difficult.[144] YouTube is the most visited site in the United States, mainly used for broadcasting videos.[145] It does not facilitate two-way communications as quickly as the other two platforms.[146] As on the other two platforms, the Senate Intelligence Committee assessed the intent of the YouTube videos might have been to suppress black voter turnout since the YouTube videos were primarily targeted at African Americans.[147]

The sheer magnitude of the IRA's social media campaign targeting the United States was unparalleled in the digital age. Researchers retained by the SSCI estimated the IRA had uploaded over 1,000 videos on YouTube and reached a significant number of American users: 59 percent on Facebook, 19 percent on Instagram, and two percent on Twitter.[148] In table 1, the Special Counsel's Office estimated the number of people reached by a Facebook posting or a Twitter tweet. Although the ultimate number of individual American voters influenced by the IRA remains unclear, table 1 reveals the scale of the reach by the social media platforms.

Table 1. Reach of IRA-controlled Social Media Accounts[149]

Social Media Platform	Number of Accounts	Number of Users Reached
Facebook	470	126,000,000
Twitter	3,814	1,400,000

For the second line of effort, the IRA amplified real user accounts whose identities, behavior, and content aligned with the IRA's strategic goals.[150] Clemson University researchers discovered over 100,000 real user accounts amplified by IRA-controlled social media bots.[151] They noted the IRA-targeted accounts with fewer followers for amplification and speculated these types of accounts would generate less scrutiny from the social media companies or perhaps wanted to increase these accounts' prominence to serve their ends. Immediately before and after the 2016 U.S. elections, the IRA changed from generating its own original content to amplifying real users' messages. The IRA may have presumed that real users' posts would be more impactful and resonant with American viewers.[152] This shift showed the IRA's continued evolution to maximize its effectiveness.

For the third line of effort, the IRA purchased online advertisements from the social media companies to complement its other activities.[153] In 2016, the IRA spent about $100,000 on Facebook and $5,000 on Google.[154] Twitter noted that the Kremlin-controlled media site, Russia Today, spent about $274,000 in online advertisements to

promote over 1,800 tweets on its platform.[155] The IRA was very tactical in its advertising campaign. Using "race, ethnicity, and self-identity" as categories allowed it to use Facebook and Instagram to target specific demographic groups.[156] Then, it would run advertising targeting each of these demographic groups to drive users to IRA-created social media content.[157] The IRA employed different tactics for the purchase of Google online advertisements. In this case, Google ads guided users to various IRA-controlled websites and domains.[158] Marketing research indicates organic content has more resonance than paid content (i.e., advertisements).[159] Since the IRA's online advertising campaign primarily drove users to the organic content, evaluating its success is difficult. The Senate Select Committee on Intelligence concluded that the advertisements were not a vital component of the IRA's campaign.[160] However, the IRA used different techniques to further its social media influence operation, showing flexibility and adaptability.

b. Private Sector Countermeasures

In broad terms, organizations may take three categories of actions to counter influence operations: security, transparency, and resiliency. Security measures involve the monitoring, detection, and neutralization of threats. Transparency measures comprise information sharing to relevant stakeholders, whether between organizations, organizations and individuals, or the general public. Transparency measures also promote trust by allowing people to see what is going on. Finally, resiliency measures involve taking steps to be able to recover quickly from adverse situations.

During and immediately after the 2016 U.S. elections, the Big Three social media companies of Facebook, Google, and Twitter were utterly unaware of the IRA's massive

Page 1372 of 3957

influence campaign across all of their platforms.[161] The social media companies had no countermeasures in place to mitigate or disrupt the IRA's activities. Even if they had been aware, whether the social media companies would have taken any serious actions cannot be known for sure. Comments from Mark Zuckerberg, Founder and Chief Executive Officer of Facebook, on November 11, 2016, exemplified the companies' mindset when he famously said the notion that fake news would have any impact on the presidential elections was "a pretty crazy idea."[162] The social media companies took no security, transparency, or resilience measures. Ultimately, they offered no resistance to the IRA's malign activities during the 2016 U.S. elections.

c. U.S. Government Countermeasures

The private sector and U.S. government's efforts were disconnected ahead of the 2106 elections. Although U.S. government agencies, such as the FBI, monitored Russian influence operations, none of their acquired intelligence was relayed to the social media companies to protect their platforms.[163] Ambassador McFaul noted that cooperation between the technology companies and the U.S. government was "almost non-existent" before the 2016 U.S. Elections in the post-Snowden leak era.[164] This condition showed an almost complete lack of transparency between the two entities.

The U.S. government's attempts at security or transparency measures did not come until late into the presidential campaign season. The first official statement regarding the 2016 elections from the U.S. government came on October 7, 2016, when the Department of Homeland Security and Office of the Director of National Intelligence issued a one-page joint statement attributing the hack of the DNC and multiple hacking attempts against state election infrastructure to the Russian Federation.[165] However, the statement provided no technical details and only general cybersecurity guidance. The joint statement's intended

Page 1373 of 3957

effect may have been to inform the American electorate of malign actions being taken by Russia. Though such an effect was probably diminished because on the same day, the media was focused on the breaking news that Donald Trump had made lewd comments about women to Entertainment Tonight reporter Billy Bush in 2005 when the *Washington Post* released a video of their conversation.[166]

The second set of transparency and security-related actions from the U.S. government came on December 29, 2016, which was well after the elections. As an act of transparency, the FBI and DHS issued a joint action report titled "GRIZZLY STEPPE—Russian Malicious Cyber Activity." The report provided an overview of the Russian hacking activities ahead of the election and shared technical details.[167] If the U.S. government had provided this information ahead of the elections, especially the technical details, it could have helped political organizations and campaigns safeguard their computer networks and electronic devices. As another security and transparency action by the U.S. government, the Department of the Treasury publicly sanctioned nine Russians and two Russian intelligence agencies, the Federal Security Service (FSB) and the General Military Intelligence Directorate, for election-related cybercrimes.[168] It also sanctioned two Russian hackers for financial cybercrimes under the same executive order (E.O. 13694).[169] The purpose of these sanctions was to expose the American public to all of the Russian activities directed against the U.S. elections. Other sanctions such as those imposed by the Magnitsky Act have illuminated Russian oligarchs' and bureaucrats' corrupt financial dealings while relinquishing their ill-gotten funds.[170] Although these actions showed a proportional response from the U.S. government, the effect of such

actions as a deterrent for future Russian meddling in U.S. elections remains indeterminate. U.S. economic sanctions imposed after the annexation of Crimea did not deter Russia from its occupation of certain parts of Eastern Ukraine but may have curtailed further encroachment into Ukraine.[171]

During this period, the last transparency action from the U.S. government came on January 6, 2017, when the ODNI issued a supplemental report to the previously published GRIZZLY STEPPE report. This report aimed to lay out the U.S. government's analytical process and provide additional details justifying the attribution of election interference to the Russian Federation.[172] Unfortunately, whether this belated disclosure meaningfully affected public discourse or Americans' understanding of the activities surrounding the 2016 U.S. Elections is nebulous at best.

d. Using the Kartapolov Framework to Evaluate Russian & American Measures in 2016

As mentioned in the Research Design section, Thomas Wilhelm, Director of the U.S. Army's Foreign Military Studies Office, developed a framework to understand how asymmetric techniques fit within the Russian philosophy of warfare to achieve its goals. This framework was inspired by Wilhem's analysis of the writings and speeches of Russian Deputy Minister of Defense, Andrei V. Kartapolov.[173] Using the Kartapolov Framework offers an organized structure to evaluate the effectiveness of the Russian measures and American countermeasures. As a reminder, the relevant elements of the Kartapolov Framework for analyzing Russian social media-based influence operations against the United States are: (1) spreading discontent in the population; (2) exerting political pressure; and (3) confusing the political leadership.[174] These elements will be used to gauge the effectiveness of the Russian measures targeting the 2016 elections. In addition, the

174 Kartapolov, "Lessons of Military Conflict, Perspectives on the Development of the Related Forms and Methods," 36.

Page 1375 of 3957

American countermeasures will be assessed in terms of their effectiveness in mitigating the aforementioned elements.

The critical elements of the Kartapolov Framework can easily be superimposed on the 2016 activities of the IRA's campaign in a step-by-step fashion.[175] The first element, spreading discontent in the population, described the IRA's precise method of targeting different demographic groups with fake content, amplifying actual user content, and purchasing advertising. Researchers concluded that IRA's tailored messaging aimed to motivate conservatives to vote while suppressing liberals, specifically black voters.[176] A record number of Americans voted in 2016, but Black voter turnout dropped from its 2012 levels.[177] Table 2 below illustrates the decreased Black voter turnout levels. The Pew Research Center said voter turnout percentages among the other racial demographics stayed about the same.[178]

Table 2. Comparison of Black Voter Turnout for Presidential Elections.[179]

Election Year	Black Voter Turnout
2012	66.6%
2016	59.6%
Change	**-7.0%**

A direct correlation between the IRA's activities and lower Black voter turnout cannot be determined within the scope of this thesis. American voters' motivations to vote

or not vote are myriad and not always easy to discern. Chryl Laird, Bowdoin College professor, suggested that Black voter turnout fell in 2016 because the Black community did not have the same incentives to vote as they did in 2008 and 2012 when there was a Black candidate for president.[180] It is still unclear whether the IRA's operation contributed to the record number of Americans voting or suppressing turnout among Black voters in 2016. What is clear is that the IRA deliberately intended to influence American voters' behavior regarding the elections and possibly eroded their faith in the electoral process.

For the second element of the framework, exerting political pressure, the IRA's efforts seemed to impact the U.S. government as its responses appeared delayed and muted. After the Senate Intelligence Committee issued its report reviewing the response of the Obama Administration to the Russian interference, Senator Richard Burr commented that they were "frozen by 'paralysis of analysis,' hamstrung by constraints both real and perceived; Obama officials debated courses of action without truly taking one."[181] In this report, the Senate Intelligence Committee noted that the FBI and DHS did not provide the general public or state and county election officials with notifications about the malicious cyber activities until the late summer of 2016.[182] Because the activities were not attributed to Russia, these notifications would not have drawn much scrutiny.[183] The third element of the framework, confusing political leadership, appeared in one of the SSCI report findings, which noted that government officials were conflicted about making public announcements for fear of feeding the political narratives about insecure or fraudulent elections.[184]

The social media companies were utterly caught by surprise and had no awareness of the malign Russian influence activities on their platforms. As such, they did not take any

action against the Internet Research Agency's influence campaign in 2016. Instead, these companies allowed the IRA free rein to achieve the relevant elements of the Kartapolov Framework. However, later on, intense pressure from U.S. lawmakers and the media would eventually force the social media companies to examine what had taken place on their platforms and strive to ensure it did not happen in the future.[185]

Reviewing the U.S. government's countermeasures through the Kartapolov Framework revealed its ineffectiveness to counter the Internet Research Agency's efforts. For the first element of the framework, the IRA had an unfettered ability to conduct information operations on social media and spread discontent throughout the American population. Not until October 2016 did the U.S. government take any action. However, the one-page statement from DHS and the ODNI attributing election interference to Russia did not make an impression with Americans as news media reporting on the tawdry revelations of the Trump discussion on the Entertainment Tonight video and the hacked emails from John Podesta likely overwhelmed all other news coverage.[186]

For the second element, the Russian activities appeared to exert tremendous political pressure on the Obama White House. Multiple news media outlets reported that in the summer of 2016, President Obama was reluctant to take explicit actions because he did not want to appear to be influencing the election in favor of Clinton.[187] By the same token, the third element involved confusing the political leadership. Whether the IRA's tactics perplexed the Obama administration is moot because the delayed governmental

Page 1378 of 3957

response represented the result that the Russians would have desired. The U.S. government's actions in the form of the FBI/DHS joint report detailing Russian activities and the Treasury Department's economic sanctions did not come until well after the elections had already been decided. The U.S. Intelligence Community assessed that Putin and Russia perceived their ability to shape the American discourse and influence the outcome of the 2016 U.S. Elections to be at least a "qualified success" and that there would be little negative impact to continuing their online operations.[188]

Evaluating the Russian and American efforts using the Kartapolov Framework for this period revealed that Russia was the ultimate winner of the 2016 U.S. elections. The IRA's social media campaign had fulfilled the Kartapolov Framework's core tenets of spreading discontent in the population, exerting political pressure, and confusing political leadership.[189] The American efforts ranged from non-existent, in the case of the social media companies, to ineffective, in the case of the U.S. government.

2. What Happened During the 2018 U.S. Midterm Elections?

After the 2016 U.S. Elections, the Internet Research Agency's online operations continued unabated through the 2018 U.S. Elections.[190] Analyzing the IRA's activities and the countermeasures taken by the private sector companies and the U.S. government revealed how their tactics have evolved. The effectiveness of the Russian and American measures was evaluated using the Kartapolov Framework.

a. The IRA's Social Media Activities

Despite being outed by the media and the U.S. government in late 2016, the IRA appeared to operate without interruption at almost the same levels in 2017 and 2018. This success indicated that the IRA continued to be a well-financed organization and a

Page 1379 of 3957

seemingly worthwhile investment for Yevgeniy Prigozhin, Putin's close ally.[191] The IRA's financial strength is shown in Table 3. Given the power structure in Russia, Putin likely knew of and approved of these activities.[192] From his perspective, Putin had won the battle of 2016 and wanted to continue the social media campaign as part of the ideological struggle between Russia and the United States.[193]

Table 3. IRA Spending Plan for 2017 and 2018.[194]

Year	Budget
2017	$12,000,000
2018	$10,000,000 (January through June)

Oxford researcher Philip Howard observed the IRA taking advantage of prominent events by timing its online advertising purchases to coincide with events such as the announcement of the Trump tax plan and U.S. military strikes in Afghanistan and Syria.[195] This development may suggest the IRA had honed its skills to cater to the users it engaged. A second reason could be that the IRA shifted much of its social media activities from Facebook to Instagram. Because Instagram is more image-focused, it could be more conducive to the meme operations which the IRA appeared to favor. In addition, Instagram recognized the importance of meme campaigns and hired a manager focused solely on the

Page 1380 of 3957

meme community.[196] Lastly, DiResta stated that groups of low-paid workers, known as click farms, could have been used by the IRA to fraudulently make their Instagram accounts more prominent than they otherwise would have been through organic user engagement.[197]

An analysis of the IRA's Twitter activities from 2014 to 2018 uncovered the sophistication used to target distinct online communities. Specifically, the IRA targeted people from different demographic groups based on their political issues of interest[198] Approximately half of all the tweets from the IRA-controlled accounts happened in 2017.[199] This targeted approach indicated a certain mastery of the platform and seemed to be focused on fomenting dissension among the different groups identified by the IRA.

The IRA continued using online advertising through 2017 before social media companies adjusted their ad purchasing policies, effectively shutting them out.[200] Thus, at least through 2017, the IRA's tactics appeared to be relatively unchanged. Ostensibly, the IRA's continued social media activities on these platforms were meant to set the stage for influencing voter opinions and turnout ahead of the 2018 U.S. Midterm Elections and beyond.

b. Private Sector Countermeasures

Before the 2018 U.S. Midterm Elections, Facebook, Google, and Twitter announced they had taken substantive actions and policy changes to address malign foreign influence and election integrity issues on their platforms.[201] These actions seemed to be

Page 1381 of 3957

focused on security and transparency measures. Facebook and Twitter appeared to be the most detailed in sharing their changes and the most public about account takedowns. A possible reason could be that Facebook and Twitter faced more Congressional scrutiny than Google as their senior executives testified before Congress on three separate occasions before the midterm elections.[202] In one of the hearings, Google was also in attendance but appeared more circumspect about account takedown notifications because it did not observe as many IRA-controlled accounts on YouTube.[203] In fact, Google only announced the takedown of one IRA-controlled YouTube account ahead of the 2018 midterm elections.[204]

Facebook stated it took a series of measures to protect its platform: (1) "better collaboration with governmental, non-governmental, and technology companies to identify and disrupt new threats; (2) hiring fact-checking organizations to review content and; (3) improved technological methods for detecting fake accounts."[205] Facebook also changed its advertising purchasing policies to make the buyers transparent and maintains a library of purchased political advertisements. Most notably, Facebook began to publicize its detection and takedowns of fake accounts and pages. In 2018, Facebook announced three takedowns totaling 597 Facebook pages, 287 Facebook accounts, and 99 Instagram accounts.[206] Thus, whether bowing to political pressure or genuinely wanting to reform, Facebook appeared to take tangible actions to combat foreign influence campaigns.

Google and Twitter also took countermeasures ahead of the 2018 U.S. midterm elections. For example, Google announced improved cybersecurity measures to protect

[206] Facebook.

Page 1382 of 3957

political campaigns and their platforms.[207] During the same year, Twitter indicated its efforts included improving its algorithms to detect and takedown social media bots, establishing an internal cross-functional team to handle foreign influence threats, modifying its advertising policies to promote buyer transparency, updating its terms of service to ban all inauthentic behavior, and enhancing the security configuration settings for the application programming interface.[208] In addition, Twitter highlighted its intelligence sharing with Jigsaw, Google, other social media companies, and law enforcement agencies.[209] In October 2018, Twitter released an archive of foreign-influence-related account information so "members of the public, governments, and researchers can investigate, learn, and build media literacy capacities for the future."[210] In 2018, Twitter announced the takedown of 3,613 IRA-associated accounts.

On the one hand, Google's response to the Russian influence campaigns appeared to be subdued, likely because YouTube had not played a significant role in the IRA's playbook for 2016. For example, Howard noted that Google only provided 228 YouTube 2016 election-related videos to the Senate Intelligence Committee, and each video was viewed about 1,500 times or less.[211] On the other hand, Twitter's response was similar to Facebook's and made substantive efforts to combat malign foreign influence on its platform. As a result, the number of accounts taken down by Facebook and Twitter in 2018 was roughly commensurate with the number of accounts discovered after the 2016 U.S. elections. The reason for this disparity in the number of IRA accounts on each platform is indeterminate.

c. U.S. Government Countermeasures

Before the 2018 U.S. midterm elections, the U.S. government took a series of public actions to address Russia's interference in the 2016 U.S. elections and put countermeasures in place to ensure better protection in subsequent elections. These actions comprised both transparency and security measures. Transparency-focused efforts aimed to inform the American electorate about what happened in 2016 and was still occurring. Jennifer Hochschild, a Harvard College professor, believed "democracies thrive best…if citizens have a broad education and some level of political knowledge."[212] Americans should have access to information that is free of corrupt foreign influence to inform their voting. The security-focused actions were intended to deter and punish Russian interference in the U.S. electoral process or safeguard their intended targets. These actions took the form of Congressional hearings, an FBI initiative, multiple indictments, economic sanctions, and other operations. Unlike in the lead-up to the 2016 U.S. elections, the U.S. government was very active and public in enacting countermeasures before the 2018 U.S. midterm elections. These actions are described below in chronological order.

On August 31, 2017, the State Department announced the closures of the Russian Consulate in San Francisco and annexes in New York City and Washington, D.C.[213] These closures were taken in response to Russia reducing the size of the American workforce at the U.S. Embassy in Moscow, which was perceived as a retaliatory measure for the United States sanctioning multiple Russians in December 2016 for their interference in U.S. Elections.[214]

On October 31, 2017, the Senate Judiciary Committee held a hearing with senior executives from Facebook, Google, and Twitter to discuss the extent of the Russian disinformation campaigns on their respective platforms.[215] This public hearing was one

Page 1384 of 3957

of America's first opportunities to hear about what happened from the U.S. social media companies. It also provided politicians with the occasion to exert pressure on the companies to make constructive changes to their platforms.

In December 2017, Congress reestablished the Global Engagement Center (GEC) as an agency within the State Department responsible for countering foreign state and non-state propaganda and disinformation operations.[216] Previously, the GEC was established under Executive Order 13721 in the Obama administration to counter foreign terrorist propaganda and online recruitment efforts.[217] It would later pivot to focusing on exposing foreign state disinformation campaigns.

On January 29, 2018, the FBI announced its Protected Voices Initiative. FBI Director Christopher Wray said it "provides tools and resources to political campaigns, companies, and individuals to protect against online foreign influence operations and cybersecurity threats."[218] Under the auspices of the initiative, the FBI provided cybersecurity briefings to, and stayed engaged with, the national-level political organizations. This security-based countermeasure was focused on protecting one of the primary targets for Russian information operations.

On February 16, 2018, the Special Counsel's Office indicted Yevgeniy Prigozhin and 12 employees of the IRA with eight criminal counts for their efforts to interfere in the 2016 U.S. Elections.[219] The unsealed indictment affidavit offered the first opportunity for the American public to learn about the extent of the scope and scale of the Russian influence operation. The unsealed indictment affidavit described in evidence-based detail what the IRA had propagated on social media against the American public. The accompanying arrest warrants showed the U.S. government's intention to bring these Russians to face justice at some point.

On March 28, 2018, the Department of Treasury levied sanctions against 16 Russian nationals for election interference-related activities. These included some of the individuals mentioned above whom the Special Counsel's Office previously indicted. In addition, on June 11, 2018, another eight Russian nationals were sanctioned for associated activities.[220] These were another set of measures likely designed to inflict punishment on the Russian actors and act as a deterrent for future activities targeting U.S. elections.

On April 10–11, 2018, the Senate Commerce Committee and Senate Judiciary Committee held hearings on consecutive days with Mark Zuckerberg to discuss Russia's influence campaigns on Facebook and its countermeasures to combat them.[221] This hearing provided the American public with the opportunity to listen to one of the primary architects of the current social media landscape in the United States. The Senate committees also used this as an opportunity to hold Facebook accountable for its actions and exert pressure for positive change.

On July 17, 2018, the House Judiciary Committee held a hearing with senior executives from Facebook, Google, and Twitter so they could provide updates on their companies' efforts for content filtering to stop foreign influence campaigns on their platforms.[222] On September 5, 2018, the Senate Intelligence Committee held a hearing with senior executives from Facebook and Twitter to discuss their companies' efforts to stop foreign influence campaigns and illegal transactions on their platforms.[223] Both of these hearings were additional occasions for Americans to learn about social media companies' progress in safeguarding the upcoming election.

Page 1386 of 3957

On October 19, 2018, the IRA's chief accountant, Elena Alekseevna Khusyaynova, was indicted by the U.S. Attorney's Office for the Eastern District of Virginia because of her role in the conspiracy to interfere with the U.S. political system, to include the 2016 and 2018 U.S. elections.[224] Khusyaynova's unsealed indictment affidavit revealed the extent of the IRA's financial transactions as the group waged its influence campaign against the United States.[225] Moreover, as she is a regular Russian citizen without the privileges typical to Russian oligarchs or diplomats, her indictment may deter other Russians from working for the IRA or similar types of companies.

The Washington Post reported that U.S. Cyber Command conducted an offensive cyber operation on November 2, 2018, against the St. Petersburg-based IRA office, a day before the U.S. Midterm Elections.[226] This operation was believed to have knocked out the IRA's computer networks for days. If true, this operation showed that the U.S. government was willing to reveal and deploy its technical capabilities to safeguard the integrity of the electoral process.

On November 16, 2018, Congress enacted the Cybersecurity and Infrastructure Security Agency Act of 2018. This legislation created the Cybersecurity and Infrastructure Security Agency (CISA) under the Department of Homeland Security.[227] In January 2017, DHS designated the election system infrastructure as the 17th critical infrastructure sector. CISA is the U.S. government agency charged with helping state and local governments secure America's election systems.[228] Both security-focused actions showed that the U.S.

Page 1387 of 3957

government perceives elections are vital to national security and requires consolidating a host of protective cyber functions into one federal agency.

In contrast to the 2016 U.S. elections, the executive and legislative branches of the U.S. government were active ahead of the 2018 elections as it took a series of security measures to shore up vulnerabilities in the different facets of the democratic process, such as providing cybersecurity briefings for political organizations, and enhance transparency about governmental actions to inform the American public, through the many Congressional hearings, law enforcement actions, and economic sanctions.

d. Using the Kartapolov Framework to Evaluate Russian and American Measures in 2018

For the 2018 U.S. elections, the Kartapolov Framework was used to evaluate the effectiveness of the Russian actions, primarily through the efforts of the Internet Research Agency. It was also used to determine the efficacy of the American efforts, both private sector and governmental, to counter each element of the framework. As a reminder, the relevant elements of the framework for this evaluation are: (1) spreading discontent in the population; (2) exerting political pressure; and (3) confusing the political leadership.[229]

After the 2016 U.S. elections, multiple researchers determined that the Internet Research Agency continued at the same cadence and volume of activity as before, seemingly undeterred by being outed in the news media and through government communications.[230] The New Knowledge and Oxford University researchers noted that the Internet Research Agency used meticulous precision to identify different demographic groups by race and political affinities to amplify dissension with its online messaging.[231] Another purpose of the IRA's messaging was to promote right-wing voter turnout and

---

[229] Kartapolov, "Lessons of Military Conflict, Perspectives on the Development of the Related Forms and Methods," 36.

[230] DiResta et al., *The Tactics & Tropes of the Internet Research Agency*; Freelon and Lokot, "Russian Disinformation Campaigns on Twitter Target Political Communities across the Spectrum. Page 1388 of 3957

suppress left-wing and Black voters.[232] The IRA's actions were trying to fulfill the first element of the Kartapolov Framework by trying to spread discontent in the American population. A review of the U.S. Census Bureau's analysis of the 2018 elections voter turnout revealed a mixed outcome to what the IRA would have desired. The overall voter turnout was the highest in 40 years, with 53.4 percent of eligible voters going to the polls in 2018. This turnout contrasts to the 41.9 percent who came out to the polls in 2014, which was the lowest midterm election turnout in 40 years.[233] Table 4 summarizes the increase in both Black and White voter turnout for the midterm elections. While the IRA promoted right-wing voter turnout, which are typically White voters, its efforts to suppress Black voter turnout failed.

Table 4. Voter Turnout by Demographic in Midterm Elections.[234]

Election Year	Black Voter Turnout	White Voter Turnout
2014	40.6%	45.8%
2018	51.4%	57.5%
Change	**+10.8%**	**+11.7%**

The Internet Research Agency's ongoing activities must have exerted some political pressure on the private sector and the U.S. government because of the assortment and frequency of public actions taken by both entities in the run-up 2018 U.S. elections. Thus, the IRA fulfilled the second element of the framework by applying political pressure to the American social media companies and government, but the actions taken by both entities may have blunted the effectiveness of its influence campaigns. However, it does

232 Howard et al., *The IRA, Social Media, and Political Polarization in the United States, 2012–2018*, 19.

233 Jordan Misra, "Voter Turnout Rates among All Voting Age and Major Racial and Ethnic Groups Were Higher Than in 2014," Behind the 2018 U.S. Midterm Election Turnout, April 23, 2019, https://www.census.gov/library/stories/2019/04/behind-2018-united-states-midterm-election-turnout.html.

234 Adapted from Misra.

not appear that the IRA's campaigns confused the political leadership in the United States because the different governmental countermeasures listed in the previous section seemed frequent, deliberate, and proportional.

Application of the Kartapolov Framework appeared to be more favorable to the social media companies' countermeasures during the 2018 election cycle. The framework's first element, spreading discontent in the population, was countered by the social media companies' account takedown operations. As mentioned before, Facebook and Twitter identified and shut down accounts in 2018 at about the same levels as were identified in 2016. The difference from 2016 was that the social media companies were able to disrupt the IRA's activities before the 2018 elections. The framework's second element, exerting political pressure, seemed to make the social media companies act more vigorously in policing their platforms and forthcoming in announcing any actions they took. The third element, confusing the political leadership, will be discussed in the next section when reviewing the efficacy of U.S. government countermeasures. Broadly speaking, the social media companies appeared to be better equipped and decisive in thwarting the IRA's information operations during this election cycle.

Overlaying the Kartapolov Framework's elements on the U.S. government's actions revealed a different outcome than in 2016. For the first element, spreading discontent in the population, the U.S. government showed very public attempts to educate the American public and hold Russian wrongdoing accountable. Through the Justice Department and the Treasury Department, the executive branch made public announcements of indictments and economic sanctions against Russians for their roles in election interference, respectively. In addition, the legislative branch held a series of public hearings to learn about the progress the social media companies were making to counter malign foreign influence and inform the American public.

For the second element, exerting political pressure, the U.S. government was obliged to prevent a repeat of the 2016 interference by Russia. Although difficult to determine whether the U.S. government felt political pressure from the IRA's influence campaign, it displayed a broad spectrum of countermeasures, which were listed in the prior section. Finally, for the third element, confusing the political leadership, both the executive

and legislative branches of the U.S. government appeared to be informed about the threat from Russian influence operations and took appropriate countermeasures to neutralize them.

C. CONCLUSIONS FROM THE 2016 AND 2018 ELECTIONS

In summary, a review of the recent history of Russia's actions to interfere in the U.S. election and America's actions to counter these actions revealed three conclusions. First, the Internet Research Agency was virtually unfettered in its social media campaign to sow division and confusion in the 2016 U.S. elections. Second, the U.S. government and social media companies' countermeasures against the IRA ahead of the 2018 U.S. midterm elections appeared to be generally effective. Third, the Internet Research Agency appeared to be undeterred by the American efforts and made only slight modifications in its tactics from 2016 to 2018.

Researchers have determined that Russian influence campaigns, especially those conducted ahead of the 2016 U.S. elections, can be effective for eliciting partisan responses.[235] Governmental reports, research papers, and the social media companies themselves have acknowledged that the social media companies were unaware of the Russian disinformation campaigns taking place on their platforms and therefore took no active role in countering them. Congressional report findings criticized the executive branch of the government for a tepid and ineffective response to the Russian interference activities. Analysis of voter turnout revealed a relatively high overall high voter turnout but low Black voter turnout in the 2016 elections. This combination of factors may have led to Vladimir Putin achieving his desired goals of eroding American faith in its democratic process and the election of Donald Trump.[236] Ambassador Michael McFaul noted that even if the impact of the Russian influence campaign was minimal, the margin

Page 1391 of 3957

of victory for Trump was about 78,000 votes across three states that tipped the electoral college.[237]

For the 2018 U.S. midterm elections, the combined countermeasures of the private sector and the U.S. government appeared to mitigate the effectiveness of the IRA's influence operations. On December 18, 2018, Dan Coates, Director of National Intelligence, released a press statement in which he said the "Intelligence Community does not have intelligence reporting that indicates any compromise of our nation's election infrastructure that would have prevented voting, changed vote counts or disrupted the ability to tally votes."[238] The ultimate proof was the record turnout of voters across all demographic groups, including Black voters.[239]

Director Coates stated that Russia continued to conduct influence operations after the 2016 elections ahead of the 2018 elections.[240] During this period, the IRA's only shift in tactics appeared to be jettisoning its use of online political advertisements, which was probably the result of the social media companies changing their advertising policies to make it more difficult for foreign entities to purchase advertisements.[241] However, the regular cadence of account shutdown announcements from the social media companies, reports by research firms, and U.S. government reports and statements indicated the Russians would continue to be active ahead of the 2020 U.S. elections. The uncertainty was whether the social media companies and the U.S. government would be up to the task of countering the Russian information operations.

III. THE 2020 ELECTIONS – RUSSIAN GAMBIT AND AMERICAN COUNTERPLAY

> Foreign nations continue to use influence measures in social and traditional media to sway U.S. voters' preferences and perspectives, shift U.S. policies, increase discord, and undermine confidence in our democratic process.
>
> — William Evanina, July 24, 2020

The elections of 2016 and 2018 put the major social media companies and the U.S. government on high alert about Russian interference. As a result, both entities were more aggressive in their efforts to thwart the Russians ahead of the 2020 elections. The social media companies partnered with the news media and research organizations to detect and disrupt these Russian disinformation operations. The U.S. government's endeavors included law enforcement actions, threat briefings, and information sharing to the private sector. The cumulative effect of American countermeasures compelled the Russians to evolve their tactics and methods to evade detection continually. Ultimately, the American actions appeared effective in mitigating the Russian online tactics because voters were undeterred and turned out in record numbers for the election.

This chapter reviews the Russian disinformation campaign targeting the 2020 U.S. elections, the countermeasures taken by the social media companies and the U.S. government. It then uses the Kartapolov Framework to evaluate the efficacy of those countermeasures, informing recommendations for counteracting future Russian disinformation campaigns in the next chapter. Finally, figure 5 provides some key highlights of the Russian and American actions after the 2018 midterms to the 2020 elections.

Page 1394 of 3957

A. THE IRA AND OTHER PROXIES' SOCIAL MEDIA ACTIVITIES

From 2019 through 2020, the major social media companies reported most of the IRA's activities with a couple of exceptions. On at least a quarterly basis, Facebook, Google, and Twitter made announcements regarding the detection and takedown of fake Russian accounts on their platforms via blogposts. In addition, many of the IRA-related activities involved account takedowns in various geographical locations, not just Russia-based accounts. The exceptions to the major social media companies reporting Russian account takedowns came when other organizations were able to identify and expose the activities of the Internet Research Agency. In one instance, CNN broke a story about the IRA's activities in March 2020.[243] In a second instance, Graphika, a New York-based social media analysis company, issued reports on IRA activities and identified another cluster of Russia-controlled campaigns it dubbed "Secondary Infektion."[244] These account takedowns appeared to be coordinated across different organizations as Facebook and Twitter made their own announcements after the reporting by CNN and Graphika.

Different Russian proxy organizations focused on specific voting groups to affect their attitudes. For example, the Internet Research Agency established a front organization called Eliminating Barriers for the Liberation of Africa (EBLA) with offices in Western Africa.[245] On March 12, 2020, CNN exposed EBLA when it televised a news story with an associated news article about EBLA being a Russian troll farm.[246] Through its investigation, CNN determined the head of EBLA was a Russian-speaking Ghanaian named Seth Wiredu, who called himself "Mr. Amara" and registered the organization in June 2019.[247] CNN assessed he was being funded through Yevgeniy Prigozhin's Project Lakhta. Wiredu managed offices outside Accra, Ghana, and Lagos, Nigeria, with

[246] Ward et al.

[247] Ward et al.

employees who portrayed themselves as African Americans and engaged in social media activities.[248] The EBLA employees focused primarily on racial issues such as police brutality, displays of anger towards white people, and black empowerment.[249] Figure 6 provides an example of the types of postings put out by EBLA. In a similar fashion to the IRA's operations in St. Petersburg, the EBLA employees received assignments on different themes, coordinated their postings, and worked on cross-platform campaigns.[250] Before it was outed, the EBLA organization appeared to be laying the groundwork for influencing the behavior of Black voters ahead of the 2020 U.S. elections.

Figure 6. An Image from a Facebook Account Controlled by EBLA.[251]

Although the Russians tried to evolve their tactics to evade detection by the social media companies, the effort failed because the social media companies partnered with other

248 Ward et al.

249 Ward et al.

250 Ward et al.

251 Source: Ward et al.

organizations to detect and expose the Russians. One example highlighted this collaboration. On September 1, 2020, Facebook and Twitter announced that they had identified and taken down social media accounts associated with an English and Arabic language website called "PeaceData," which portrayed itself as a progressive-leaning independent news site.[252] Figure 7 shows two postings from the PeaceData site.

In coordination with Facebook, Graphika issued a report on PeaceData, which provided detailed information about the site itself, an analysis of images on the site, and the site's writers.[253] This development was notable for four reasons. First, the site was an example of the IRA shifting content off the social media platforms to a website which it controlled. Second, Graphika analyzed the profile photos of several PeaceData staff members and determined they were created through generative adversarial networks (GANS), which is a type of artificial intelligence.[254] These photos were the first known instance of the IRA using artificial intelligence to generate phony images of people. Examples of these GANS-generated profile photos appear in Figure 8. Third, Reuters broke a story about the IRA posing as PeaceData staff to hire unwitting freelance journalists, including Americans, to write articles for the site.[255] The Carnegie Endowment for International Peace determined that at least 20 freelance journalists had been duped into writing articles for the PeaceData outlet.[256] This instance is the first identified example of the IRA hiring unwitting individuals to generate content on its behalf. Fourth, Facebook shared information about the PeaceData site and associated social media networks with

Page 1398 of 3957

The Russians continued to demonstrate different tactics such as using alternative communication platforms, artificial intelligence to generate false personas, and unwitting co-optees to avoid detection by the social media companies and the U.S. government. Not only did the Russians use the PeaceData site to appeal to progressives, but they also created another site called the Newsroom for American and European Based Citizens (NAEBC) to appeal to conservatives.[260] On October 1, 2020, Reuters published an article that exposed NAEBC as another news outlet run by the IRA, which appeared to be the ideological counterpart of the PeaceData outlet.[261] Figure 9 shows an example of a posting on NAEBC. Figure 10 shows an example of cross-posting of NAEBC content on Gab.

The NAEBC site was noteworthy for three reasons. First, in addition to the mainstream social media platforms of Facebook, Twitter, and LinkedIn, the IRA used two right-wing social media platforms, Gab and Parler, to disseminate content from NAEBC.[262] Second, Figure 11 shows that the IRA continued using GANS-generated staff profile photos on NAEBC to convey a sense of authenticity.[263] Lastly, Graphika determined that the IRA used various social media accounts to engage with real users and convince them to post on the NAEBC site, which met with some success.[264] However, Graphika assessed that both the PeaceData and NAEBC outlets had limited influence because they were created around June 2020 and taken down by September 2020 before either could generate much viewership.[265] Furthermore, Graphika opined that the purpose for both the websites was two-fold. First, the sites wanted to influence voter turnout through the type of content on each site. For example, on the PeaceData site, Graphika believed articles denigrating Joe Biden compared to other Democratic candidates would

suppress Democratic voter turnout.[266] Second, the content on both PeaceData and NAEBC was meant to inflame existing discord within their viewership.[267]

The Russians targeted the far-right channels as well as the mainstream ones to reach different target audiences. In addition to its work analyzing the aforementioned IRA activities, Graphika conducted an independent investigation into another Russian information operation dubbed "Secondary Infektion."[271] Graphika determined this group has been active from 2014 to at least the beginning of 2020 and characterized the online campaigns as focusing on misinformation about foreign policy and diplomacy-related matters.[272] Although the content appeared in multiple languages, Graphika deduced the campaigns focused on targeting viewers in Europe and North America.[273] Its analysis of the top themes in the content revealed that the articles primarily concentrated on denigrating Ukraine, the United States, NATO, and sowing discord in the rest of Europe.[274] Figure 12 shows the breakdown of articles by quantity and topic. Thus, the Russians had expanded far beyond using the Internet Research Agency as a proxy for its disinformation campaigns.

[270] Source: Graphika Team, 20.

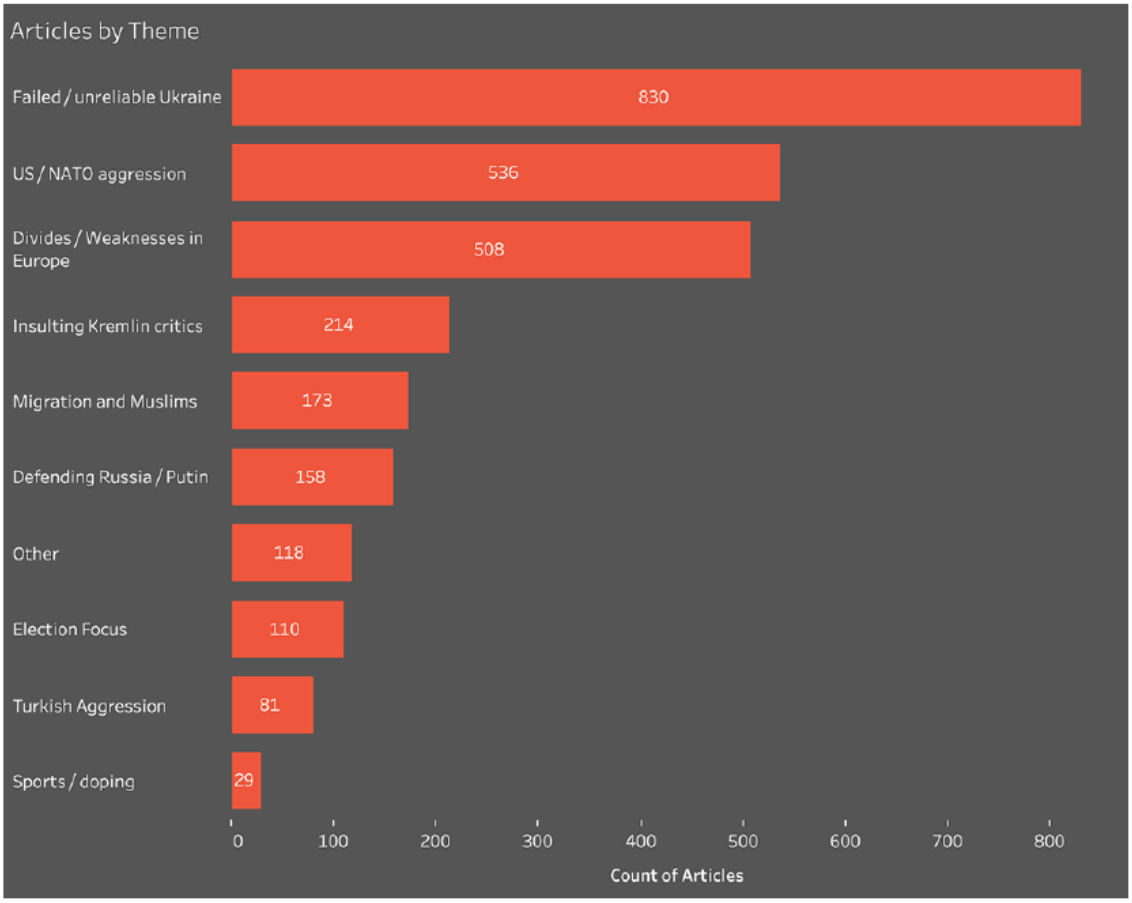
[273] Nimmo et al., 11.

[274] Nimmo et al., 14.

Figure 12. Breakdown of Secondary Infektion Articles by Topic.[275]



Secondary Infektion had two features that distinguished it from the other IRA-controlled campaigns. First, the actors behind Secondary Infektion made extensive use of forged postings and documents in an attempt to proliferate disinformation and propagate conflict.[276] Second, Graphika observed that Secondary Infektion used a wide-ranging set of online platforms, especially micro-blogging sites, to disseminate content, not only the mainstream social media platforms.[277] Examples of a forged post and forged document

[275] Source: Nimmo et al., 14.

[276] Nimmo et al., 4.

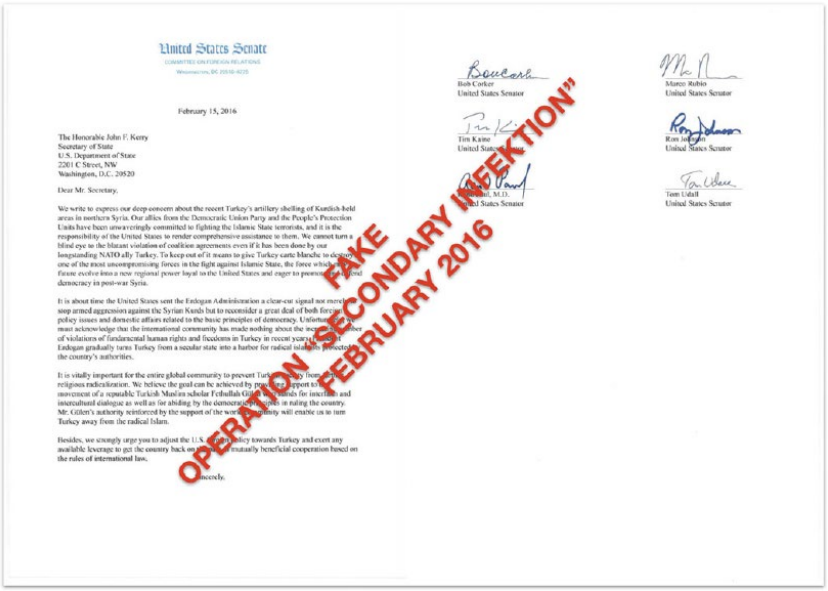
[277] Nimmo et al., 8.

Page 1402 of 3957

are shown in Figures 13 and 14, respectively. The Russians extended their reach across multiple channels and platforms by agilely adapting their tactics.

Figure 13. Secondary Infektion-made Forged Posting from Marco Rubio.[278]

Figure 14. Secondary Infektion-made Forged Letter to John Kerry.[279]



278 Source: Nimmo et al., 5.

279 Source: Nimmo et al., 6.

By being everywhere simultaneously, the Russians effectively reduced the likelihood of being shut down, given the reach of their operations. In discussion with some social media companies, Graphika believed the extensive variety of sites used by Secondary Infektion could be related to operational security.[280] Specifically, this type of behavior would reduce the impact of takedowns by any one company and make coordinated takedowns more difficult across multiple companies.[281] The social media companies told Graphika that the actors behind the Secondary Infektion activities used good security practices because they were consistent and disciplined about using "burner" accounts, which were registered, used to create a series of posts, and then abandoned within the day.[282] Graphika and the social media companies determined that Russian operators conducted Secondary Infektion. Still, they could not determine whether the campaign was associated with the IRA, GRU, or other Russia-based groups.[283] The Secondary Infektion campaigns were another example of the Russians trying to adjust their tactics to avoid detection by the social media companies.

B. PRIVATE SECTOR COUNTERMEASURES

Ahead of the 2020 U.S. elections, the major social media companies, consisting of Facebook, Google, and Twitter, continued their transparency efforts by regularly providing public notifications of foreign influence-related account takedowns. These notifications typically provided summaries of the activities the companies identified, the number of accounts taken down, and how these accounts violated their terms of service. In addition, all three companies published security measures regarding technology improvements and policy changes on their platforms ahead of the elections.[284]

Page 1404 of 3957

In 2019, Facebook announced two sets of takedowns. First, on October 21, 2019, it removed 50 Instagram and one Facebook account, which originated from Russia and focused on American users. Then, on October 30, 2019, Facebook removed five Instagram accounts, 35 Facebook accounts, 53 Pages, and seven Groups, which originated from Russia and focused on users in African countries (Cameroon, Côte d'Ivoire, the Democratic Republic of the Congo, Mozambique, Central African Republic, and Madagascar).[285] These actions showed that the IRA's activities persisted and expanded into targeting different countries and that Facebook was actively monitoring its platform and taking efforts to disrupt the IRA.

Social media companies uncovered even deeper links to Russia. In 2020, Facebook announced six sets of takedowns. All of them are summarized in Table 5. In contrast to 2016, when 470 IRA accounts were identified, Facebook identified and shut down 825 accounts in 2020. In one noteworthy takedown, Facebook discovered Facebook accounts, pages, and groups controlled by the GRU, targeting Ukraine and other Eastern European countries, and announced their removal on February 12, 2020.[286] The use of the GRU for disinformation campaigns appeared to be a new tactic by the Russians. As mentioned before, the GRU was responsible for the hack and dump attack of the Democratic National Committee in 2016 but had not previously engaged in social media influence campaigns. After the Internet Research Agency and Secondary Infektion, the GRU would be the third different Russian-controlled entity discovered to be conducting influence campaigns ahead of the 2020 elections. These takedowns confirmed the ongoing social media-focused portion of the Russian influence strategy.

Total	122	203	140	15	321	24
Grand Total	825					

On March 12, 2020, Facebook announced another noteworthy takedown, in which it shut down 85 Instagram accounts, 69 Pages, and 49 Facebook accounts.[288] Its takedown coincided with the CNN story regarding the Eliminating Barriers for the Liberation of Africa organization discussed above. Facebook assessed that individuals from Russia had recruited locals in Ghana and Nigeria to build an online social network and develop an audience; EBLA controlled at least one Instagram account with over 260,000 followers and one Facebook account with over 13,000 followers.[289] The IRA's expansion into West Africa mirrored Yevgeniy Prigozhin's business interests on the continent and suggested the IRA thought its troll-farm model could be successfully exported into other countries.[290] These takedowns demonstrated that Facebook successfully identified Russian disinformation operations despite a shift in their tactics.

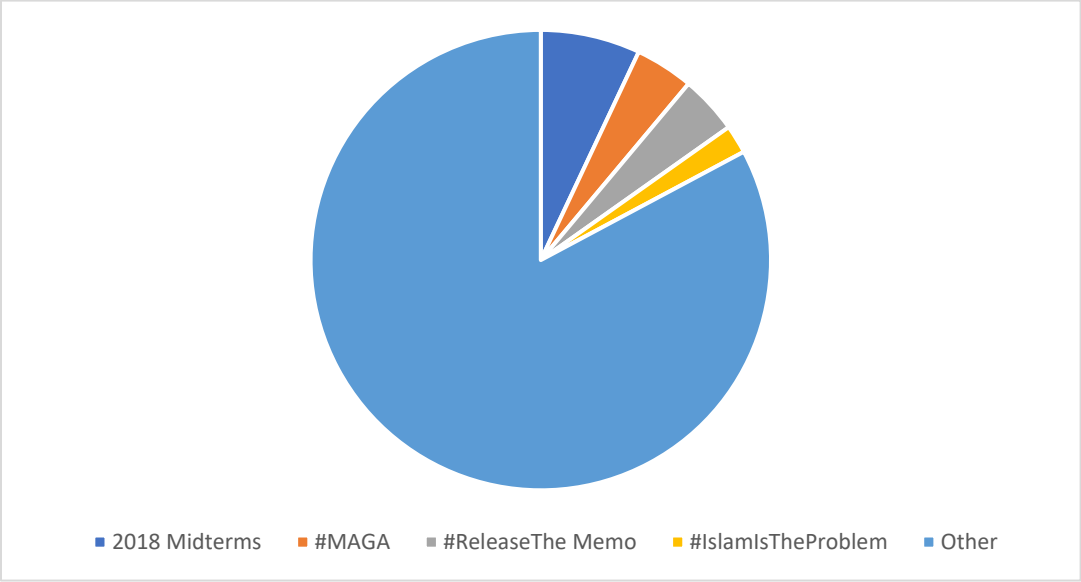
[289] Facebook.

[290] Grossman, Bush, and DiResta, "Evidence of Russia-Linked Influence Operations in Africa," 2.

In 2019, Twitter announced two takedowns totaling 422 IRA-controlled accounts, which made about 929,000 tweets.[291] Figure 15 demonstrates a categorization of tweets by topic. A review of these tweets revealed a continued focus on the 2018 midterm U.S. elections, with seven percent of all tweets, where Democrats had taken over control of the House of Representatives. The other prominent topics focused on promoting Trump, a right-wing meme that accused the FBI of misusing the Steele dossier to obtain a surveillance order on Trump associate, Carter Page, and Islamophobic rhetoric. The themes promoted by the IRA on Twitter showed its continued acuity in determining the hot-button issues that would agitate right-wing voters.

Figure 15. Breakdown of Twitter Tweets by Topic for 2019.[292]



On November 11, 2019, Twitter announced a ban on virtually all political advertisements.[293] It made a few minor exceptions for issue-based ads and news

[291] Twitter, "Elections Integrity."

[292] Adapted from Twitter.

[293] Feiner and Graham, "Twitter Unveils Final Details for Political Ad Ban, but It's Still Looking Murky."

organizations already exempted from its policy. Twitter "defines political advertising as referencing a candidate, political party, elected or appointed government official, election, referendum, ballot measure, legislation, regulation, directive or judicial outcome."[294] Although Twitter was the first of the major social media companies to ban political advertisements, critics in news media perceived it as an expedient move meant to earn goodwill with the public while only costing less than one percent of its quarterly revenue.[295]

Expanding beyond earlier takedowns, the major social media companies coordinated their publicity for more significant impact and established more direct links to Russia. In 2020, Twitter announced four sets of takedowns, as summarized in Table 6. For 2020, a total of 1,233 accounts were taken down, versus the 3,814 accounts identified as being controlled by the IRA in 2016. One noteworthy takedown occurred on March 12, 2020, when Twitter announced the shutdown of 71 accounts operated by the Eliminating Barriers for the Liberation of Africa organization in Ghana and Nigeria.[296] Twitter attributed them to Russian-sponsored activities, which CNN characterized as an attempt "to sow discord by engaging in conversations about social issues, like race and civil rights."[297] The synchronization of announcements by Facebook and Twitter with the CNN breaking story suggests some level of coordination between the three companies.

Another significant Twitter takedown occurred in June 2020, with the shutdown of 1152 accounts, which Twitter and the Stanford Internet Observatory attributed a campaign dubbed the "Current Policy" to the IRA because of the anti-Western and pro-Putin content it disseminated.[298] Stanford's analysis determined the Current Policy accounts posted more than 3.4 million tweets since 2013, with some focused on portraying actual Russian

government agencies and others working to boost specific Russian politicians or federal initiatives.[299] These actions revealed coordination among the social media companies, news media, and a research organization to thwart Russian disinformation operations.

Table 6. Summary of Twitter Takedowns for 2020.[300]

Type	Month			
	March	June	September	October
Account	71	1152	5	5
Grand Total	1,233			

At the beginning of 2020, Twitter announced an enhancement of its safety policies, developing better tools for detecting abusive behavior, and aggressively taking actions against violations of the terms of service.[301] Twitter also highlighted its collaboration with political parties, researchers, and election officials. In addition, a Twitter spokesperson stressed the importance of staying in contact with state election officials and law enforcement.[302]

On November 26, 2019, Google announced it had shut down 15 YouTube channels and associated Google accounts. These IRA-controlled accounts used English, French, and Arabic language content to target users in South Africa, Madagascar, Sudan, and the Central African Republic. Google said these accounts were associated with the account

Page 1409 of 3957

takedowns Facebook had announced on October 30, 2019.[303] This statement confirmed joint action facilitated by information sharing between the two companies.

On March 3, 2020, Google announced it had developed policies prohibiting deceptive practices such as voter suppression and misrepresentation in all its products, including Google Ads, YouTube, and the Google Play Store.[304] The company also mentioned working closely with other technology companies and the FBI regarding referrals and leads.[305] This announcement by Google showed an effort to be more transparent, coordinate with other social media companies, and acknowledge some engagement with the FBI.

In April 2020, Google's Threat Analyst Group began to blog about account takedowns every quarter. Table 7 provides a summary of the number and types of accounts taken down by Google. For 2020, Google took down a total of 129 accounts, which is lower in number than in 2016, when it identified and submitted 228 YouTube videos and 655 AdWord advertisements to the Senate Intelligence Committee for review.[306]

C. U.S. GOVERNMENT COUNTERMEASURES

Ahead of the 2020 U.S. elections, the U.S. government appeared publicly focused on transparency efforts, such as public statements and a hearing, and modifying the policies regarding interactions with political campaigns. The U.S. government also took security steps, such as information sharing with relevant stakeholders, including social media companies and political campaigns. The major social media companies mentioned working with the U.S. government to some extent. Some news reporting corroborated this engagement between the private sector companies and the U.S. government.

Only one public Congressional hearing took place before the U.S. elections on November 3, 2020. On September 18, 2019, the Senate Commerce Committee held a hearing with senior executives from Facebook, Google, and Twitter to discuss their companies' efforts to remove extremist content and disinformation from their platforms.[308] This hearing was the only opportunity in 2019 for the American public through Congressional testimony and for Congress to publicly hold the companies accountable for the actions they previously pledged to protect the elections.

On May 15, 2020, to address foreign interference threats more directly, William Evanina, Director of the National Counterintelligence and Security Center (NCSC), was tasked with leading all the U.S. government threat intelligence briefings to the relevant national political committees and presidential campaign committees.[309] The ODNI likely changed the briefers from a rotating cadre of analysts from the FBI and DHS to streamline the process for the recipients and let the political campaigns and all Americans know the entire U.S. Intelligence Community backs these threat briefings.[310]

Before the 2020 U.S. elections, the FBI took some public actions related to election security. On October 23, 2019, FBI Director Wray announced an expansion of the

Page 1411 of 3957

Protected Voices Initiative.[311] New cybersecurity training videos and reference materials were added to the website. Furthermore, the FBI indicated it would provide cybersecurity training to all of the presidential campaigns ahead of the primary election season.[312] This training supplemented the FBI's ongoing engagement with the national-level political committees. This security-related action continued the FBI's efforts to help the various political campaigns safeguard their computer networks and electronic devices.

On January 16, 2020, the FBI stated it was modifying its notification policy regarding computer intrusions to election infrastructure. Previously, the FBI would notify local election officials whose organizations typically owned and maintained the election systems and equipment. The local officials would be responsible for informing the state-level officials. With this policy change, the FBI would simultaneously notify the designated chief state-level election official as well as the local officials impacted by a cyber-attack. According to the FBI press release, "this new policy will result in increased collaboration between all levels of government for the integrity and security of U.S. elections."[313] Thus, the FBI appeared to publicly state affirmative actions it was taking to safeguard the elections. Previously, the FBI had been typically reluctant to disclose election-related actions to the public.

Despite not making public announcements about its involvement with the private sector, the U.S. government appeared to be more engaged with social media companies ahead of the 2020 U.S. elections than in 2016. On September 4, 2019, Facebook hosted an election security meeting with the FBI, DHS, and ODNI.[314] The other companies

Page 1412 of 3957

attending the meeting included Google, Microsoft, and Twitter.[315] The group discussed plans for better coordination and information sharing.[316] This meeting was the first indication of private sector companies meeting with the U.S. government to safeguard the 2020 U.S. elections. In August 2020, the New York Times broke a story revealing that the private sector companies working with the U.S. government had expanded to include the Wikimedia Foundation, Verizon Media, Reddit, Pinterest, and LinkedIn.[317] A spokesperson for the private sector companies stated that they regularly met with the U.S. government agencies responsible for election security to discuss threat trends and worked closely with each represented company to protect their platforms.[318]

Public statements from some social media companies revealed that the U.S. government, particularly the FBI, had provided them with tipper information to detect Russian influence operations on their platforms. In August 2020, Facebook announced that it had taken down two pages and 13 Facebook accounts, which the IRA was controlling, and mentioned finding the cluster due to off-platform activities identified by the FBI.[319] In September 2020, Facebook and Twitter announced the takedown of PeaceData-associated accounts being controlled by the IRA.[320] Facebook stated that it had been able to identify the accounts based on off-platform information provided by the FBI.[321] Twitter went further in its statement when it expressly thanked the FBI's Foreign Influence Task Force for its "close collaboration and continued support of our work to protect the public conversation at this critical time."[322] In October 2020, Facebook identified and shut down

a network of IRA-controlled Facebook and Instagram operated out of Mexico and Venezuela.[323] Once again, Facebook mentioned its ability to identify these accounts based on information provided by the FBI.[324] Also, in October 2020, Google noted it had shut down one blog and 26 YouTube channels being operated by the IRA.[325] In addition, Google's Threat Analysis Group mentioned it had received leads provided by the FBI to support its internal investigation.[326] In total, the FBI appears to have shared information with Facebook, Google, and Twitter on at least four occasions, which led to the detection and takedown of multiple IRA-controlled accounts on their respective platforms. This sharing contrasted with 2016 when it seemed that the U.S. government had not shared any threat information with the social media companies ahead of the 2016 U.S. elections.

Besides the FBI and DHS, other U.S. government agencies were also publicly involved in election security. For example, in August 2020, the NSA, jointly with the FBI, issued a cybersecurity advisory exposing complex malware dubbed "Drovorub," created by Russian Military Intelligence.[327] This advisory was the first of its kind and would allow private and public sector organizations to safeguard themselves ahead of the election. Also, in August 2020, the State Department's Global Engagement Center issued an extensive report revealing the disinformation tactics employed by the Russian government and associated organizations, such as the IRA.[328] The State Department believed this report would help news media, private and public sector organizations, and other governments detect and analyze Russian influence operations to build up a collective resilience.[329]

During the elections, the U.S. government had little to do with the actual administration of political campaigns or elections. Instead, the U.S. government was responsible for providing funding to states for equipment upgrades, conducting enforcement actions to ensure fair elections, and keeping the American public apprised of any significant developments.[330] On November 4, 2020, after the election polls had closed across the United States, Christopher Krebs, Director of the Cybersecurity and Infrastructure Security Agency, issued a statement that the U.S. government had seen no evidence of Russian or other foreign adversaries changing ballots or preventing Americans from voting. In December 2020, Krebs reaffirmed his belief about the integrity of the 2020 U.S. Elections during a hearing before the Senate Committee on Homeland Security and Governmental Affairs in December 2020.[331] Senior election executives representing America's election infrastructure sector made a statement that echoed Krebs' claim of a safe and fair election.[332]

In March 2021, the Office of the Director of National Intelligence issued the Intelligence Community's report assessing foreign threats to the 2020 U.S. elections.[333] Similar to what NCSC Director Evanina said in his August 2020 statement, the ODNI assessment emphasized the ongoing and concerted Russian disinformation campaign, which was designed to promote the reelection of President Trump, denigrate Joe Biden and the Democratic Party, erode trust in the election process, and inflame political and social tensions within the United States.[334] The ODNI discussed the efforts of the Internet

Research Agency and highlighted the "short-lived troll farms" based in Mexico and Western Africa, which were initiated to avoid the ongoing account takedown efforts by the social media companies with help from the U.S. government.[335] The ODNI concluded that greater awareness by the news media and the American public, coupled with the actions taken by the social media companies and the U.S. government, likely countered the Russian efforts to some degree.[336]

D. USING THE KARTAPOLOV FRAMEWORK TO EVALUATE RUSSIAN AND AMERICAN MEASURES IN 2020

As previously used for appraising IRA information operations during the elections in 2016 and 2018, the relevant components of the Kartapolov Framework were used to evaluate the Russian and American efforts to determine their effectiveness for the 2020 U.S. Elections. To reiterate, these components are: (1) spreading discontent in the population, (2) exerting political pressure, and (3) confusing the political leadership.[337] The impact of the Russian campaigns on American political leadership will be gauged in the section evaluating the countermeasures taken by the U.S. government.

1. The IRA and Other Proxies – Impact and Evolution

The Internet Research Agency evolved its tactics ahead of the 2020 U.S. elections but was unsuccessful in achieving its ultimate desired outcome of a Trump reelection. The IRA's tactical developments were two-fold: (1) moving troll farm operations to locations outside of Russia, namely West Africa and Mexico, and (2) moving content from the social media platforms to websites the IRA controlled. For the first component of the Kartapolov Framework, a review of all four of the IRA's campaigns for 2020 showed they were focused on inflaming dissension in the populace. CNN evaluated the social media content disseminated by Eliminating Barriers for the Liberation of Africa and noted it was primarily focused on racial issues such as Black empowerment and used language meant

335 Office of the Director of National Intelligence, 3.

336 Office of the Director of National Intelligence, 6.

337 Wilhelm, "A Russian Military Framework," 35.

to inflame divisions between American racial groups.[338] For the PeaceData outlet, Graphika's analysis determined the actors behind it were targeting progressive groups in the United States, especially those who identified with democratic socialism.[339] The Newsroom for American and European Based Citizens site appeared to be the counterweight to PeaceData. It targeted viewers with a far-right ideology because it covered topics such as racist tropes about black people and criticism of the Black Lives Matter movement.[340] Lastly, the Secondary Infektion campaign's focus on diplomacy and foreign policy appeared to be tailored to denigrate the United States and its European allies while also trying to foment conflict between the allied countries.[341] Although the Russian actions likely inflamed already existing dissension in the United States, it did not appear to deter voter turnout at all. The effectiveness of the Russian messaging was probably blunted by the account takedowns by the major social media companies and being outed by the news media before it could develop traction with the targeted audiences.

For the second component of the Kartapolov Framework, exerting political pressure, the Russian campaigns appeared to have mixed results. On the one hand, from interviews conducted with the social media companies, CNN determined that the IRA-controlled organization, Eliminating Barriers for the Liberation of Africa, had successfully gathered many followers for its social media accounts since its inception in June 2019.[342] Facebook reported to CNN that the EBLA-controlled accounts had about 267,000 users following EBLA-controlled Facebook or Instagram accounts.[343] Twitter reported that EBLA-controlled accounts had about 68,000 followers before being shut down.[344] Although the number of followers does not directly correlate to the amount of political

343 Ward et al.

344 Ward et al.

pressure, it indicates that EBLA's content resonated enough with social media users to convince them to follow the EBLA-controlled accounts.

On the other hand, the other Russian campaigns appeared to be less effective in creating political pressure. Since its inception in February 2020, the PeaceData site averaged about ten posts per day on the English-language page and 20 posts per day on the Arabic-language page.[345] Twitter noted that the PeaceData-associated Twitter accounts were "low quality and spammy," and assessed they did not garner much attention from other Twitter users.[346] Facebook also took down a few PeaceData-associated Facebook and Instagram accounts but did not characterize how other users engaged with these accounts.[347] The Newsroom for American and European Based Citizens outlet started in June 2020 but did not appear to attract much of a social media following. Graphika discovered that only about 14,000 users on Parler and 3,000 users on Gab followed the NAEBC site.[348] The Secondary Infektion campaign appeared to be prolific during its existence. Still, Graphika noted that the vast majority of the content produced did not garner much, if any, engagement with other users.[349] Graphika opined that the operators behind Secondary Infektion were motivated more by hitting production metrics than content engagement or virality.[350] The ability of the Russian influence campaigns to generate political pressure may have been dampened by the social media company account takedowns and exposure by media outlets and Graphika, which will be discussed in more detail in the next section.

For the third component of the Kartapolov Framework, namely confusing the political leadership, the impact of the Internet Research Agency and other Russian proxies'

actions will be discussed in the section evaluating the impact of the U.S. government's actions.

2. The Private Sector Companies' Impact and Adaptations

The effectiveness of the private sector countermeasures used against the Russian influence operations targeting the 2020 U.S. election was evaluated using the Kartapolov Framework. To combat the first component, spreading discontent in the American public, the private sector responded to take security-focused actions. Specifically, the companies enhanced their detection systems to identify and disrupt Russian influence activities before gaining much traction with their users. As a result, each of the prominent social media companies had somewhat different results from 2016 to 2020, shown in table 8.

Table 8. Social Media Account Takedowns between 2016 and 2020.[351]

Company	Number of Accounts Taken Down		
	2016	2020	Difference
Facebook	470	825	+355
Google	883	129	-754
Twitter	1,233	3,814	+2,581

While Facebook and Twitter saw an increase in IRA-controlled accounts on their platforms, Google saw a decrease in accounts taken down. A partial explanation for this phenomenon could be that Instagram, a wholly-owned Facebook subsidiary, was the most

[351] Adapted from @TwitterSafety, "June 2020: Disclosing Networks of State-Linked Information Operations We've Removed"; @TwitterSafety, "September 2020: Disclosing Networks to Our State-Linked Information Operations Archive"; @TwitterSafety, "October 2020: Disclosing Networks to Our State-Linked Information Operations Archive"; Facebook, "February 2020 Coordinated Inauthentic Behavior Report"; Facebook, "March 2020 Coordinated Inauthentic Behavior Report"; Facebook, "April 2020 Coordinated Inauthentic Behavior Report"; Facebook, "September 2020 Coordinated Inauthentic Behavior Report"; Facebook, "August 2020 Coordinated Inauthentic Behavior Report"; Facebook, "October 2020 Coordinated Inauthentic Behavior Report"; Google Threat Analysis Group, "TAG Bulletin," August 5, 2020; Google Threat Analysis Group, "TAG Bulletin," November 17, 2020; Ward et al., "Russian Election Meddling Is Back."

conducive social media platform for propagating memes, which has become prevalent in popular culture and was also favored by the IRA.[352] Another explanation was that the IRA might have needed to shift resources away from YouTube activities to develop the PeaceData and Newsroom for American and European Based Citizens outlets.

Another method for stopping the spread of discontent in the population was for the private sector companies to share data from foreign influence-related account takedowns with third-party organizations, such as researchers and research institutions. After the 2016 U.S. Elections, each of the companies shared data with the Senate Committee on Intelligence, who in turn shared it with researchers to analyze it.[353] Since that time, each company has shared data to varying degrees with researchers and other organizations. For example, in June 2020, Twitter shared information with Stanford University regarding the detection and takedown of Chinese, Russian, and Turkish influence campaigns on their platform.[354] Twitter shared the data with Stanford as an objective third party to analyze and publish the results in service of increased transparency.[355] In September 2020, Graphika revealed Facebook had given it data regarding the PeaceData outlet.[356] In October 2020, Graphika received information from Facebook and Twitter regarding the Newsroom for American and European Based Citizens outlet.[357] These examples illustrated the social media sharing information with third parties to presumably publicize objective analysis regarding IRA disinformation and tactics to the public.

All of the major social media companies took visible measures to counter political pressure, the second component of the Kartapolov Framework, which the IRA exerted through its online influence activities on the different social media platforms. These transparency-focused actions included the increased cadence of each company's public

355 Stanford Internet Observatory.

356 Nimmo et al., "IRA Again: Unlucky Thirteen."

357 Graphika Team, *Step Into My Parler*.

notifications to the general public regarding account takedowns. A secondary transparency-focused action was each company's effort to enact and improve its advertising purchasing policies. For Facebook and Google, these improvements appeared to make it more difficult for foreign actors to purchase political advertisements.[358] Twitter went the furthest of the three social media companies by banning political ads entirely in its November 2019 announcement.[359] The third type of transparency-focused action was the attempt by companies to improve the labeling of content. Again, Twitter appeared to be the most aggressive of the three social media companies. In May 2020, Twitter announced that labeling would be applied to all content disputed, misleading, or synthetically generated.[360] In June 2020, Facebook made a similar announcement and modified its policies to improve transparency for political content and advertisements.[361] Thus, the private sector companies' collective security and transparency-related actions seemed to diminish the impact of the Russian influence operations by preventing them from gaining much traction on the social media platforms.

3. The U.S. Government's Impact – Transparency and Private Sector Partnerships

Examining the U.S. government's actions to protect the 2020 U.S. Elections through the Kartapolov Framework revealed a more robust response than in 2016. For the first element of the framework, spreading discontent across the populace, the U.S. government took a range of security and transparency-related actions to impede Russian influence operations. Likely the most significant action was the FBI's reported information sharing with the social media companies on at least four occasions, which led to the

361 Facebook, "Facebook - Preventing Election Interference."

Page 1421 of 3957

companies identifying and taking down multiple clusters of IRA-controlled accounts.[362] In addition, the U.S. government meeting with the private sector companies on at least two separate occasions to share information on threat trends may have added context and atmospherics to enhance the companies' detection methods.[363] Finally, the report issued by the State Department's Global Engagement Center in August 2020 may be regarded as a U.S. government transparency effort to expose Russian disinformation tactics to the American public and blunt the impact of these tactics.[364] In general, the U.S. government appeared more actively engaged with the social media companies ahead of the 2020 elections.

For the second element of the Kartapolov Framework, exerting political pressure, the U.S. government took a series of measures, which may have diffused the pressure that Russia was trying to apply through its information operations. The FBI's Protected Voice Initiative, which provided cybersecurity training to the national level political parties and presidential campaigns, was coupled with the classified threat briefings to the same organizations provided by National Counterintelligence and Security Center's Director William Evanina.[365] Furthermore, the FBI modified its victim notification process by including designated state-level election officials when notifying local or county-level election officials of cybersecurity issues.[366] Finally, the highly detailed joint NSA/FBI cybersecurity advisory regarding the Drovorub malware exposed one of the Russian

Page 1422 of 3957

military's most potent cyber weapons, providing organizations with time to protect themselves ahead of the elections.[367] This combination of actions by the U.S. government probably ensured no significant data breaches at any national-level political parties or campaigns during the 2020 U.S Elections.

For the third element of the Kartapolov Framework, confusing the political leadership, the U.S. government, both the executive and legislative branches, appeared to be focused and decisive in its endeavors to safeguard the 2020 U.S. Elections. In September 2019, the Republican-chaired Senate Commerce Committee called a hearing with senior executives from Facebook, Google, and Twitter to learn about their progress in removing disinformation and violent content from their platforms.[368] The following year, public statements made by NCSC Director William Evanina in July 2020 and August 2020 gave a clear indication that the U.S. Intelligence Community was aware of Russian activities targeting the elections and decided to inform the American public.[369] In a similar vein, on the day after the elections closed, Christopher Krebs, Director of the Cybersecurity and Infrastructure Security Agency, stated that the U.S. government had "no evidence any foreign adversary was capable of preventing Americans from voting or changing vote tallies."[370] In October 2020, the Department of Justice indicted six officers in the Russian Military Intelligence Unit 74455, responsible for hacking attacks in Georgia and Ukraine,

and the Winter Olympics in South Korea.[371] Some of these GRU officers had been previously indicted for hacking the Democratic National Committee in 2016.[372] Interestingly, the Department of Justice highlighted the assistance of the threat intelligence teams from Google and Cisco for this indictment.[373] Additionally, the report on Russian disinformation tactics issued by the State Department and the joint cybersecurity advisory issued by the NSA and FBI rounded out the U.S. government's multi-agency approach to exposing malign Russian activities through different avenues.

E. VOTER TURNOUT IN THE 2020 ELECTIONS

The two most important indicators of a secure and successful election were high voter turnout and no evidence of systemic voter fraud. The Pew Research Center determined that 2020 had the highest voter turnout since 1960, with approximately 158 million Americans casting ballots.[374] Table 9 shows a comparison in voter turnout between 2016 and 2020, both of which were presidential election years. In addition, multiple news organizations and think tanks on both sides of the aisle reported that the 2020 U.S. elections were free of any systemic voter fraud, impacting the results.[375]

Page 1424 of 3957

Table 9. Comparison of Overall Voter Turnout for Presidential Elections.[376]

Election Year	Number of Voters Turning Out	Percentage of Voter Turnout
2016	137,500,000	61.4%
2020	158,000,000	66.2%
Change	**+20,500,000**	**+4.8%**

It is still unclear whether the IRA's operations contributed to the record number of Americans to vote or suppress turnout among Black voters in 2016. The U.S. Census Bureau will not have an analysis of voter demographics for the 2020 elections until late in 2021. Despite the lack of demographic data for 2020, the Russian attempts to depress voter turnout were unsuccessful as Americans turned out in record numbers.

F. CONCLUSIONS FROM THE 2020 U.S. ELECTIONS

Reflecting on the 2020 elections, three main themes emerged. First, the Russians continued their efforts to target the U.S. elections while shifting tactics to avoid detection. Second, the social media companies, along with news media and research organizations, were able to identify and disrupt the evolving Russian disinformation campaigns. Third, the U.S. government was a more active player in securing the elections, primarily through its information sharing with the social media companies, political organizations, and the American public.

Despite the best efforts of the Russians, social media companies, news media, and research organizations were able to detect, expose, and disrupt the activities of the Internet Research Agency and their other online groups, namely Secondary Infektion and the GRU. Although America's private sector may have been caught unaware during the 2016 elections, it was on heightened alert ahead of 2020, with the noteworthy efforts of CNN,

[376] Adapted from DeSilver, "Turnout Soared in 2020 as Nearly Two-Thirds of Eligible U.S. Voters Cast Ballots for President"; Krogstad and Lopez, "Black Voter Turnout Fell in 2016."

Reuters, and Graphika exposing Russian disinformation activities and paving the way for the social media companies to shut down their social media accounts.

The U.S. government's response to the Russian influence campaign appeared more robust before the 2020 elections than in the 2016 or 2018 elections. These efforts comprised a series of transparency and security-related measures. The most important actions taken by the U.S. government may have been the information sharing with the social media companies to expose Russia's different operations and shut down its accounts. In addition, the U.S. government's information-sharing may have helped the social media companies secure their platforms by identifying malign Russian influence activities. At first glance, the U.S. government's other responses, such as economic sanctions and indictments, may not seem impactful because the United States does not have an extradition treaty with Russia. As a result, the sanctioned or indicted individuals may never be brought to justice in the U.S. court system. However, a critical role of sanctions and indictments is to provide transparency, i.e., factual narratives of the crimes perpetrated by Russia that informs the American public.

It took the collaborative efforts of the private sector, in the form of social media companies, researcher organizations, and news media, and the public sector, in the form of the executive and legislative branches of the U.S. government, to turn back the Putin-sanctioned disinformation operations which were targeting the 2020 U.S. elections. These collective actions were viewed through the lens of the Kartapolov Framework to determine their effectiveness in countering Russian influence operations. The next chapter will identify and examine the most effective countermeasures and provide recommendations for safeguarding future elections.

Page 1426 of 3957

IV. CONCLUSIONS AND RECOMMENDATIONS TO COUNTER RUSSIA IN THE FUTURE

> The problem of foreign actors trying to influence the American electorate is not going away and, given the current partisan divides in this country, may find fertile ground in which to grow in the future.
>
> — Mark Warner, March 16, 2021

Senator Warner, Chair of the Senate Intelligence Committee, made the above statement after the Office of the Director of National Intelligence released its report appraising foreign threats to the 2020 U.S. elections. This report, backed by the entire U.S. Intelligence Community, assessed that Russia was actively trying to influence the elections through information operations.[377] Furthermore, the report forecasts Russia will continue to interfere in future U.S. elections to degrade the United States' global credibility and weaken its influence overseas.[378] In anticipation of the continued Russian influence threat, this chapter provides a final summation of the American efforts to protect the 2020 elections and concludes which efforts were the most effective. Based on these conclusions, recommendations have been proposed to protect future U.S. elections. These recommendations are derived, in part, from proposals by subject matter experts in a variety of fields.

A. CONCLUSIONS – THERE IS NO END GAME

The major social media companies and the U.S. government's efforts to protect the 2020 U.S. elections against Russian malign influence campaigns appeared to be generally successful. Using the Kartapolov Framework in this thesis provided a systematic method to analyze the effectiveness of the American countermeasures qualitatively. As a reminder, the framework is a mental model devised by Thomas Wilhelm, a U.S. Army researcher, to understand better the Russian military's perspective in conducting information operations

[377] Office of the Director of National Intelligence, "Intelligence Community Assessment on Foreign Threats to the 2020 U.S. Federal Elections," 2.

[378] Office of the Director of National Intelligence, 5.

Page 1427 of 3957

to further its objectives.[379] The most effective measure taken by the major social media companies was the rapid detection and takedown of fake accounts and content generated by the Internet Research Agency and other Russian proxies. The social media companies' other efficacious efforts included publicizing these account takedowns, which promoted transparency to the American public, and partnering with other organizations, such as news media and researchers, to expose Russian influence activities which were not on the social media platforms. The most effective measure taken by the U.S. government was likely its information-sharing efforts with the social media companies to help them identify previously unknown Russian influence activities on their platforms. The U.S. government's other effective efforts included its initiative to inculcate good cybersecurity practices among the national-level political parties and campaigns and regular public messaging about malign influence activities to the American populace.

The Internet Research Agency resembled a professional marketing firm that employed both technology and psychology to maximum effect.[380] It took advantage of easy-to-use social media platforms to reach millions of U.S. citizens.[381] The IRA recognized the existing dissension among different sectors of the American population and exploited it to drive people further into tribalism.[382] Over the past several years, the IRA honed its skills and precisely identified specific in-groups it wanted to influence. On the right side of the political spectrum, the IRA focused on issues such as illegal immigration, gun rights, religious freedom, anti-abortion, and the general fear of change.[383] Although challenging, if not impossible to quantify, the IRA's influence activities may have reinforced these people's in-group beliefs, which could have potentially activated them to vote for Trump. On the left side of the political spectrum, the IRA appeared to play on the fears and frustrations of the more racially and ideologically diverse group to suppress voter

Page 1428 of 3957

turnout.[384] The IRA's main shift in tactics from 2016 to 2020 was its creation of fake news outlets appealing to far-right conservatives, in the form of the Newsroom for American and European Based Citizens, and ultraliberals, in the form of the PeaceData site.[385] Ostensibly, the IRA's rationale for this shift was to control its own content and avoid the aggressive disruption tactics of the major social media companies. The IRA's other significant shift was to use indigenous workers in other countries to mask its true identity, explicitly creating the front organization known as Eliminating Barriers for the Liberation of Africa.[386]

The Internet Research Agency's role in influencing the 2016 and 2020 U.S. Presidential Elections may have been marginal but still impactful. That being said, the IRA's influence in 2020 was significantly diminished compared to its efforts in 2016. The primary reason was that the IRA's activities were unnoticed and unconstrained in 2016 but were quickly detected and disrupted in 2020 by the major social media companies and the U.S. government. One of the IRA's primary goals was to suppress Black voter turnout.[387] An illustrative statistic was the decline of Black voter turnout in 2016 by seven percent compared to the 2012 elections.[388] In 2020, Black voter turnout rebounded by four percent over the 2016 levels.[389] In addition, other minority groups had significant increases in voter turnout for 2020. Hispanic voter turnout increased by six percent, and Asian voter turnout increased by ten percent.[390] These 2020 turnout results showed the ineffectiveness of the IRA's efforts.

Page 1429 of 3957

Many factors are at play when trying to measure the effects of Russia's influence operations. First-order effects include real users interacting with inauthentic content, Russian-bot amplification of divisive organic content, and IRA-controlled accounts communicating directly with real users. Second-order effects include changes to the social network itself by the actions mentioned above and contemporaneous sociopolitical events influencing discussions. Due to how the U.S. Electoral College process awards presidential electoral votes, the U.S. Presidency was decided by about 78,000 votes combined across Michigan, Pennsylvania, and Wisconsin for 2016.[391] In 2020, Biden won the presidency by about 45,000 votes combined across Arizona, Georgia, and Wisconsin.[392] In both presidential elections, voter turnout was near historical highs.[393] In order to protect future elections in the United States, a whole-of-society approach will be needed to counter malign influence from Russia and other adversarial nation-states.

B. RECOMMENDATIONS FOR PROTECTING FUTURE ELECTIONS FROM RUSSIAN INTERFERENCE

Like the Cold War's nuclear arms race, the United States may be in a new information operations race with Russia. Based on the evaluation of the Russian actions and the effectiveness of the American responses, this section makes recommendations for protecting future elections that have been drawn from experts in the U.S. government, non-governmental organizations, and academic institutions. The three types of possible actions are broadly categorized as security, transparency, and resiliency measures.[394] Social media companies and the U.S. government have mainly focused on the first two types of measures: security and transparency. Although these measures proved to be successful for the 2020 elections and are essential to safeguarding our democracy and the public

perception of fair elections, they may not be sufficient for future elections because of the current political rancor in the United States. To that end, resiliency measures will be the third critical component to promote a flourishing American democracy.

1. Security Measures

Security measures serve three purposes: (1) prevention of disinformation or data breaches, (2) deterrence of damaging actions or operations, and (3) punishment of criminal or other harmful actions.[395] These recommendations came from an evaluation of U.S. government and private sector actions taken to counter the efforts of the Internet Research Agency and other Russian actors. The most impactful measures against the evolving threat from Russian information operations were distilled from various U.S. government, non-governmental organizations, and academic literature. The proposed security measures, summarized in Table 10, include enhanced cybersecurity, enhanced disinformation detection, economic sanctions, information sharing, and the establishment of a fusion center. Items highlighted in yellow are existing measures. Items highlighted in green are new proposed measures.

[395] Bodine-Baron et al., *Countering Russian Social Media Influence*, 12; U.S. Congress. Senate Select Committee on Intelligence, *Russian Active Measures Campaigns: Volume 1*, 54.

Page 1431 of 3957

Table 10. Security Measures for Countering Russian Information Operations.

Measure	Description	Responsibility
Enhanced Cybersecurity	Build up cyber expertise and defenses to prevent breaches of election infrastructure and other government infrastructure.[396]	• Government • Private Sector
Enhanced Detection	Use advanced technologies, such as artificial intelligence, to quickly detect and take down disinformation. These technologies can augment other types of content moderation.[397]	• Private Sector
Economic Sanctions	Deter malicious activities and impose costs for actors who seek to interfere in U.S. elections and the democratic process.[398]	• Government
Information Sharing among Government, Social Media Companies, and External Researchers	Share threat intelligence among key stakeholders to detect, identify, and disrupt disinformation campaigns.[399]	• Government • Private Sector • Researchers
National Counter Information Operations Center	Create an interagency fusion center under the Office of the Director of National Intelligence to coordinate strategy, intelligence, and operations regarding disinformation campaigns.[400]	• Government

The first recommendation is for the U.S. government to continue providing cybersecurity training and briefings to relevant stakeholders. The Russians did not cause any significant data breaches of any national-level political organizations or campaigns for

396 Adapted from O'Connor et al., *Cyber-Enabled Foreign Interference*, 6; *Russian Active Measures Campaigns: Volume 1*, 55; *Report on Russian Active Measures*, 121–22.

the 2020 U.S. Elections. Some of this success can be attributed to the cybersecurity training and briefings provided to the political organizations and campaigns by the FBI and DHS.[401] The prevention of data breaches in the future will mean less fodder for the Russians or other adversarial governments to incorporate into disinformation campaigns. These cybersecurity enhancement actions should continue to be used moving forward as technological changes happen rapidly.[402]

The second recommendation calls for advanced technologies, including artificial intelligence, to be developed and deployed on social media and news platforms to enhance the detection, monitoring, and neutralization of covert malign foreign influence activities.[403] These malign activities may take the form of disinformation content, botnet amplifications, or incitement of divisive issues. The neutralization can take the form of traditional account takedowns or marking the accounts and content with labels identifying their origins and providing access to sources of factual information. Advanced technology tools should be developed so platform companies or users may detect disinformation or influence activities and crowdsource the appropriate neutralization methods.[404] The removal of foreign disinformation content can help promote the integrity of American free speech and halt the erosion of trust in the electoral process.[405] Due to the First Amendment (free speech) and Fourth Amendment (privacy) constraints on the U.S. government, advanced detection and removal technologies are best employed by private sector companies.[406]

Page 1433 of 3957

The third recommendation is the continued use of economic sanctions by the U.S. government. Continued sanctions by the Department of Treasury against Russian individuals and entities appeared to have had a significant impact on Russia as a security measure. As anecdotal evidence, one of the primary discussion topics at the infamous Trump Tower meeting was supposed to be the previously mentioned Magnitsky Act.[407] This act imposed severe financial sanctions on the close allies of Putin and continues to be a thorn in his side.[408] The sanctions imposed in 2018 may have an add-on effect to the Magnitsky Act.[409] Economic sanctions should continue to be part of a broad range of tools utilized concurrently by the U.S. government for deterrent and punitive effects.[410]

The fourth recommendation is the establishment of formal information-sharing mechanisms. Information sharing among different organizations is occurring, but on an ad hoc basis, as was seen ahead of the 2020 elections when the FBI shared information with the social media companies to help them detect the disinformation campaigns on their platforms.[411] Information sharing among relevant stakeholders in the malign foreign influence space should be formalized and standardized. Appropriate sharing should occur between social media companies, those companies and the U.S. government, and researchers with the U.S. government and social media companies. The Information Sharing and Analysis Center (ISAC) model has proven successful in different sectors for information sharing. One example of this is the Financial Sector ISAC (FS-ISAC).[412] Currently, no Social Media Sector ISAC exists. This gap is likely because of the competitive nature of social media companies. Still, the FS-ISAC has shown that financial

Page 1434 of 3957

institutions can set aside rivalries for the common good. The benefit of having an information-sharing organization would be to establish norms and best practices for the private sector, in addition to sharing threat indicators for mutual benefit.

The last recommendation is for the U.S. government to establish a National Counter Information Operations Center as an interagency fusion center and focal point for countering disinformation campaigns.[413] The bipartisan U.S. Cyberspace Solarium Commission pointed out that the 2020 National Defense Authorization Act (NDAA) provided a provision wherein the Office of the Director of National Intelligence could form a "Social Media Data and Threat Analysis Center."[414] This center could be modeled after the National Counterterrorism Center, which also operates under the Office of the Director of National Intelligence. The commission envisioned a center that would allow the relevant U.S. government elements to work alongside social media companies to combat disinformation.[415] In April 2021, the Office of the Director of National Intelligence responded to the new legislation by announcing it was establishing "the Foreign Malign Influence Center "in light of evolving threats and in support of growing policy and congressional requirements."[416] As of the writing of this thesis, no further details have been provided by ODNI, but the announcement appears to be in line with the functionality of the center proposed in the 2020 NDAA.

2. Transparency Measures

Transparency measures are designed to build trust and confidence in organizations by sharing relevant information with the general public.[417] The transparency measures proposed include a public communications strategy, content labeling standards, updated

Page 1435 of 3957

political advertising and campaign finance laws, and transparency reporting. Table 11 summarizes the proposed transparency measures to combat Russian disinformation campaigns. As with the last table, yellow highlighted items are existing measures, and green highlighted items are new proposed measures.

Table 11. Transparency Measures for Countering Malign Russian Influence.

Measure	Description	Responsibility
Public Communication Strategy	Devise and execute a strategy to counter disinformation in the public sphere, both domestically and overseas, through multiple avenues.[418]	• Government • Private Sector
Content Labeling	Establish and use a standardized method for labeling disinformation and misinformation on websites and social media platforms.[419]	• Private Sector
Transparency Reporting	Provide the public with reports that summarize the quantity and type of disinformation on a company's platform. These reports should include raw data for third parties, such as researchers, to conduct detailed analyses.[420]	• Private Sector • Researchers
Update Political Advertising and Campaign Finance Laws	Strengthen current statutes to improve transparency and prevent foreign entities from purchasing advertisements or donating to political campaigns.[421]	• Government

[421] Adapted from Cederberg et al., *National Counter-Information Operations Strategy*, 12; *Report on Russian Active Measures*, 127.

First, a public communications strategy would be a whole-of-government plan to effectively counter disinformation and propaganda campaigns being waged against the American populace.[422] An effective strategy would involve providing counter-narratives using factual information across various mediums to ensure the public received it, such as through news media and social media outlets.[423] It would also involve exposing false or misleading content and the origins of this information so Americans could understand how they were being targeted.[424]

Second, the private sector companies should also standardize and expand their use of labeling for disinformation, misleading content, and the origins of content.[425] This change would allow users to decide for themselves how to think about and handle the content. As an example, Twitter and Facebook have started labeling misleading tweets and posts by government officials.[426] The Foreign Agent Registration Act (FARA) is the U.S. government's version of what Twitter is doing regarding labeling.[427] FARA mandates that all agents of foreign governments register with the Department of Justice and ensure all of their content in advertising or other messaging is prominently labeled.[428] However, this statute was enacted in 1938 and could use an update to consider current malign influence efforts by Russia and other countries.[429] Congress should provide legislative fixes to enhance the transparency of foreign involvement with U.S. officials or political

candidates.[430] This addendum includes foreign businesses and consultants who support political campaigns, as well as the disclosure of any financial interests a political candidate may have overseas.

Third, transparency reports are the key mechanism for private sector organizations to share information with the American public.[431] These reports should be expanded to include more nuanced details about foreign influence activities detected and thwarted on social media platforms. All social media companies should also make public their entire archives of malign covert influence content that was taken down.[432] These archives will enable general users, as well as researchers and non-governmental organizations, to analyze the data and provide reports to the American populace. The relationship between the companies and the researchers can help the companies build capacity to analyze malign foreign influence efforts and earn public trust from engaging with independent researchers.

Last, both political advertising and campaign finance laws should be strengthened by closing loopholes to identify the buyers and donors more quickly while also considering the exponential growth of online platforms for advertising and fundraising.[433] Current technology advancements have allowed foreign entities to anonymize or obscure their identities and origins. The House Intelligence Committee noted loopholes in current campaign finance laws that allow foreign entities to provide services to political campaigns.[434] Improved political advertising and campaign finance laws will allow the American public to make informed decisions during the elections.

3. Resiliency Measures

The last but perhaps most crucial measure for consideration is resiliency. The 2021 Intelligence Community's annual threat assessment named Russia as one of "the most serious intelligence threats to the United States" and warned that the Russian government would continue its efforts to propagate dissension in the American populace.[435] In combating future Russian influence campaigns, the two relevant facets of resiliency are improved media literacy and critical thinking for the American public.[436]

Improved media literacy requires both educational and technological components. One study showed that media literacy education for adolescents had "more to do with promoting an understanding of media content and production, rather than simply forming habits of consumption."[437] The government, news media, and social media companies all need to play a role in helping both children and adults understand media content origination and generation.[438] The solutions include public service announcements that are informed by media literacy experts, education programs for school-aged children, and career development or continuing education programs for adults.[439]

Technological enhancements are also needed to improve media literacy. In our current digital age, Americans are awash with overwhelming amounts of information, much of which is false or misleading. A recent study showed that exposure to inaccurate or misleading information on Facebook might slow down or stop users' knowledge

Page 1439 of 3957

acquisition.[440] All of this content, if made by Americans, is considered free speech. A thornier issue is the artificial amplification of American free speech by Russia or other foreign actors through social media botnets.[441] Artificial intelligence and other advanced technologies will be needed to detect and take down the Russian-controlled bots generating or amplifying malicious content while distinguishing it from First Amendment protected American speech.[442]

One of the essential skills needed for each American is critical thinking, i.e., the ability to discern fact from fiction to make informed conclusions and decisions.[443] Although the focus of this thesis was Russian disinformation campaigns, domestic disinformation operations also featured prominently ahead of the 2020 elections.[444] Critical thinking is an important measure that can be used to examine information despite its origin and is already being taught to some degree as a part of different school subjects such as language arts, mathematics, and social studies. A vital part of a good school curriculum should teach students how to be critical and discerning in their digital media consumption as references and sources for their other coursework.[445]

Furthermore, Americans can learn from other democracies targeted by Russian propaganda. Even with the unrelenting assault of Russian information operations, the democracies in former Soviet Bloc countries appear to have relatively informed and resilient electorates because media literacy and critical thinking are indoctrinated into their

entire education and news media ecosystem.[446] European media platforms do not feature standardized labeling of disinformation or state-sponsored content. Though these Eastern European countries do not have the economic or technological advantages of the United States, they seem to be inoculated from the effects of Russian disinformation operations.[447] Improved media literacy and critical thinking will help Americans discern what they are reading to make better-informed decisions regarding elections and other vital issues.[448]

During his farewell speech after serving a second term in office, George Washington stated, "Against the insidious wiles of foreign influence...the jealousy of a free people ought to be constantly awake, since history and experience prove that foreign influence is one of the most baneful foes of republic government."[449] Those words seem prescient today, well over two hundred years later. Except for an interlude from the end of the Cold War in 1991 to 2014, Russia has waged a campaign of information warfare to tear the fabric of Western democracy through wide-ranging operations on social media platforms targeting Americans.[450] Both the U.S. government and major social media companies were caught flatfooted in 2016 but took a series of security and transparency actions since then to counter the ongoing Russian efforts targeting U.S. elections specifically and American democracy more broadly. Hopefully, incorporating the existing and proposed measures will help repair and strengthen the framework of American democracy for the 21st century.

The U.S. military operates in a global information environment and is subject to propaganda influence from both domestic and foreign media. Access to information and disinformantion can now influence attitudes and behavior from the battlefield to the far reaches of the world. Biased information can readily undermine the will of the American people and the American soldier to support military operations. This study examines the role of Public Affairs in information operations. It identifies the need for Public Affairs to change the objectives of its Public Information function. It concludes with recommendations for Military Public Affairs to engage in defined counter-propaganda activity.

INFORMATION OPERATIONS AND COUNTER PROPAGANDA: MAKING A WEAPON OF PUBLIC AFFAIRS

> *We are now at a crossroads of military public information. We must choose wisely which direction to go ... we must grow beyond conventional public information tactics... develop new roles ... and more importantly, we must explore strategic information concepts that are better suited to dealing with the challenges of reduced military budgets and manpower, widespread instability around the globe, new military missions and revolutionary advances in communication technology.* [1]
>
> —*Captain Mark Van Dyke*

New advances in technology have revolutionized information access and the way wars are fought. Broadcast media, television in particular, brings real-time images of war and suffering into American living rooms and even those in the jungle.[2] Like the Vietnam war, DESERT STORM had its daily news reports from the battlefield. Currently, images from Bosnia and Kosovo remind us of the power of broadcast media. However, unlike journalistic accounts of previous American war, reports from Southwest Asia were not limited to broadcasts from friendly territory.

The 1991 Gulf War to eject Iraqi forces from Kuwait ushered in a new era: real-time reporting from the battlefield. New technology, satellite relays in particular, allowed U.S. citizens to see Apache helicopter engagements in friendly zones as well as SCUD missile firings from the enemy's heartland. The battlefield of 2010 will feature imaging from space, and a ubiquitous media will monitor soldiers' activities throughout

the depth of the combat zone. In fact, current conflict in the Balkans portends that this new era is here to stay.

The ongoing information revolution calls for changes not only in warfighting but also in policy. Information technologies expand conflict beyond the traditional battlefield and enhance opportunities to conduct asymmetric war.[3] The enemy can now transmit propaganda via television screens.

We must assume that future adversaries will take full advantage of media broadcasts as propaganda tools. Propaganda in modern media will undoubtedly create greater challenges for military public affairs officers. As opportunities for manipulation of telecasts to sway public perceptions increase, military public affairs officers will have to struggle to carry out their support of the mission. In order to thwart hostile attempts to prejudice our broadcast media, Public Affairs must change its way of doing business. Indeed Public Affairs officers may now have to openly challenge broadcast news containing propaganda. To effectively neutralize broadcast news propaganda, Public Affairs must change its policy and the way it thinks about itself.

The coming years will not bring an uncomplicated, stable security environment such as that of the Cold War. The future security environment promises challenges from weapons of mass destruction to Hobbesian societies featuring resource depletion,

Page 1470 of 3957

rapid population growth, environmental damage, new infectious diseases, and uncontrolled refugee migration.[4]

We can expect countries that have ripened for conflict to have little print media circulation beyond the city limits. A war-torn country's citizens who become refugees can hardly afford the expense of or have access to newspapers. Although an evicted population can not be expected to escape with radios and televisions, electronic broadcasts are free. The proliferation of inexpensive pocket radios and televisions make it plausible that a few refugees will have the means to pull transmissions from the airways. Moreover, among the instruments of power—diplomatic, information, economic, military—information can best leverage television and radio for immediate affect on the views of citizens and leaders on both sides of a conflict.

This paper limits the term "media" to broadcast media, radio and television. The restricted definition is appropriate, since radio and television have the greatest potential to shape the future security environment.

Public Affairs involves three activities: Command Information, Community Relations, and Public Information (PI). Command Information is the commander's responsibility to disseminate accurate and timely information to soldiers, their families, and civilian employees and other internal audiences. Community Relations is the Public Affairs activity that helps

civic leaders and local communities understand the military. Public information aims to tell the military story to a wide external audience. Public Information officers work with and support the media.[5]

This study focuses on the Public Information aspect of Public Affairs. It specifically recognizes the Public Information activity as the Public Affairs linkage to the other elements of information operations—civil affairs, psychological operations (PSYOP), command and control warfare, and electronic warfare.[6]

In information operations, Public Affairs conducts information campaigns designed to establish credibility with the media to gain support for the military mission. But Public Affairs proclaim that its public information campaigns are devoid of a most effective tool: counter-propaganda activity.[7]

KNOW PROPAGANDA

Propaganda, in the minds of many, aims to appeal to prejudices by distorting facts with lies. Joint Pub 1-02 defines propaganda as "any form of communication in support of national objectives designed to influence the opinions, emotions attitudes, or behavior of any group in order to benefit the sponsor, either directly or indirectly."[8] As defined, propaganda

is dissemination of ideas and information for the purpose of inducing or intensifying specific attitudes and actions. Although some propagandists may intentionally distort fact, others may objectively present information. No matter what its objective, propaganda attempts to persuade through rational or emotional appeal or through the organization of personal opinion.[9]

Propaganda can be blatantly obvious, such as that used in Nazi Germany. The Germans had a complex and well-organized system for the spread of propaganda and the control of their culture. During World War II (WWII), the Germans raised their propaganda system to a never obtained level of sophistication. Headed by Joseph Goebbels, the propaganda department influenced most all aspects of the German culture—literature, the press, films, theater, music, broadcasting, tourism, advertising, and the arts.[10] No where could Germany's people or soldiers escape the ever-present themes: Pure-blooded Aryans are the superior race and could not be defeated by the mixed-blooded Allies and their Jewish masters.[11]

On the other hand, it may employ subtle persuasive communication techniques. Propagandistic (i.e., persuasive) communications are not "good" or "evil" in and of themselves. They can be used for good, to reduce drunk driving and lung

Page 1473 of 3957

cancer, while they may also seek to win elections and sell malt liquor.[12]

This study defines counter-propaganda activity as actions to discredit an adversary's use of broadcast media to support their national objectives by influencing the opinions, emotions, attitudes, or behavior of U.S. and friendly audiences. As defined, counter-propaganda allows for truthful, honest opposition to the enemy's media borne propaganda.

Public affairs practitioners attempt to influence target audiences through many propaganda techniques, including "spin." Scott Rodgers cites euphemisms as a propaganda technique in military discourse. As examples, the MX-Missile was renamed the "Peacekeeper," and "collateral damage" often means civilian casualties.[13] Reacting viscerally, public information practitioners blindly avoid association with the term "propaganda." They fear that indulgence in any activity labeled propaganda will create perceptions that public information practitioners lie or deliberately deceive the public. This attempt to maintain their image has made Public Affairs officers overlook their own reliance on spin.

"Disinformation" is the spin euphemism of choice for propaganda. The public affairs community says disinformation is any government-sponsored communication in which deliberately misleading information is passed to targeted individuals,

Page 1474 of 3957

groups, or governments with the purpose of influencing foreign elite or public opinion. This also defines propaganda. Thus, a case can be made that the acknowledged public affairs mission to counter disinformation applies to propaganda.[14]

Alvin and Heidi Toffler categorize six military propaganda techniques: atrocity stories, i.e. emphasis on the brutal torture and killing of innocent men, women and children; hyperbolic inflation of the stakes involved in a war, i.e. left unchecked, the conflict will lead to Armageddon; dehumanization of the opponent, i.e. the enemy leader is a heartless demon; polarization, i.e. those who refuse to join us are not on the side of right; divine sanctions, i.e. God is with us; and, propaganda that discredits the adversary's propaganda.[15] The latter category should be openly recognized and clearly designated as a vital aim of the Public Information function of Public Affairs.

The shift to third-wave information warfare is underway, and the battle for control of information by perception management will intensify. The Gulf War offers classic examples of the use of propaganda and perception management. A young woman appears before television cameras and talks about babies being ripped out of incubators in Kuwait. Later reports linked the young woman to the Kuwaiti embassy, and she was apparently following a script. In the era of real-time broadcast, such

Page 1475 of 3957

televised propaganda is going to become far more important, and it will be managed with far more sophistication.[16]

Public Affairs' potential role, identifying and attacking enemy propaganda broadcast, can be a powerful tool to shape the course of events in time of conflict. A counter-propaganda effort can get needed information to displaced populations and combatants. Victims in a dysfunctional society can use reliable counter-propaganda information to locate relief sites. On the other hand, counter-propaganda may restrain belligerents with warnings that they will be subject to punishment for war crimes.

STRATEGIC VIEW

> *Maintaining a strong military and the willingness to use it in defense of national and common interests remain essential to a strategy of engagement as we approach the 21st century.*[17]

The advent of satellite-based global television broadcasting has created yet another arena for unconventional warfare. Live television coverage provides participants in armed conflicts with unprecedented opportunities to conduct military deception and shape the way distant audiences perceive events on the battlefield. Such "CNN Wars" are likely to become more common—and with disproportionately large political repercussions, especially in societies like the United Slates where policy-

Page 1476 of 3957

making is sometimes driven by transitory public reactions to media images.

Clausewitz asserted that the center of gravity is the hub of all power and movement: "What the theorist has to say is this: one must keep the dominant characteristics of both belligerents in mind. Out of these characteristics a certain center of gravity develops, the hub of all power and movement, on which everything depends. That is the point against which all our energies should be directed."[18]

National will exemplifies Clausewitz's definition of center of gravity. And, a nation's will, as stated by Clausewitz, is derived from the trinity formed by the government, the army and the people.[19] Thus modern adversaries will seek to exploit broadcast media to target the most susceptible element of national will, the people.

Despite media influence on the people, there is little evidence of U.S. efforts to counter propaganda-laced news broadcasts. The fact is the U.S. military operates in a global information environment, and Americans are subject to propaganda influences through domestic and foreign broadcast. Nearly unlimited access to information threatens to prejudice opinions on the battlefield and at home.

Given the wide array of possible opponents, weapons, and strategies, it becomes increasingly difficult to distinguish

between foreign and domestic propaganda in the news. Sometimes it is difficult to determine who is propagandizing whom. This new uncertainty greatly complicates the traditional public information role of telling the military story.

Furthermore, the possibility arises that the very "facts" of an event can be manipulated via multimedia techniques and widely disseminated by television and radio. Countering such manipulation will increase our ability to build and maintain support for military actions. In short, our Public Affairs practitioners should actively prepare to counter enemy propaganda.

A CLEARLY DEFINED FUZZINESS

Attacking the unabated flow of propaganda across the globe can further blur the functional lines between Public Affairs (PA) and Psychological Operations (PYSOPS). Both PA and PYSOPS are key elements of Information Operations. FM 100-6 defines Information Operations as continuous military operations within the Military Information Environment that enable, enhance, and protect the friendly force's ability to collect, process, and act on information to achieve an advantage across the full range of military operations.[20]

While acknowledging that the media can dramatically affect strategic direction and the range of military operations,

Page 1478 of 3957

military doctrine does not sanction actions intended to mislead or manipulate media coverage.[21] However, it is widely recognized that visual information displayed by domestic and international news organizations directly and rapidly influenced the nature of US policy objectives and the use of military force in Rwanda, Somalia, and in the former Yugoslavian republics. Images from future conflicts will convey undeniable propaganda designed to disrupt or defeat friendly military operations. Without change in Public Affairs concepts, biased broadcast will fall in the gap between psychological operations and public information activities.

The public affairs mission is to strengthen deterrence and war-fighting powers by timely, accurate and truthful communication to U.S. military, the American public and friendly foreign audiences.[22] Public Affairs is charged with communicating the military perspective to the American public, government, and internal military audiences. Implied in the public affairs charter is the requirement to support legitimate efforts that gain or maintain public support for military operations. Also implied is the responsibility to degrade the impact of negative stories, false reports, and inaccuracies.

As the primary agent for telling the military story, Public Affairs should be most concerned when news broadcasts distort military operations. Yet, military doctrine specifically denies

Page 1479 of 3957

Public Affairs a counter-propaganda role. The services do acknowledge concern about propaganda. Joint Pub 3-53 recognizes the requirement to counter propaganda and makes this a Psychological Operations responsibility. The Joint Pub also makes it policy for PSYOP to use PA channels to provide facts that will counter foreign propaganda, including misinformation directed at the United States.[23] Juxtaposing psychological operations policy with Public Affairs could lead to unintended consequences: one military community, PSYOPS, could dupe another, PA.

Psychological Operations should continue as directed in Joint Pub 3-53: "Operations to convey selected information and indicators to foreign audiences to influence their emotions, motives, objectives and reasoning, and, ultimately, the behavior of foreign governments, organizations, groups, and individuals. The purpose of PYSOPS is to induce or reinforce foreign attitudes and behavior favorable to the originator's objectives."[24]

Public Information and Psychological Operations communicate information to civilian and military audiences to influence their perception of military operations. While PA communicates to U.S. and friendly audiences, PSYOPS targets enemy audiences. Both PA and PSYOPS contribute to achieving information dominance—the aim of Information Operations. Moreover, PA and

PSYOPS often communicate their messages through the same mediums. But, in the global information environment, neither PA nor PYSOPS can isolate their target audiences. Friend and foe will hear and view the same information. As important, news anchors willingly or unwittingly serve as agents for enemy propaganda.

Unlike Psychological Operations, Public Affairs policy not only ignores a counter-propaganda requirement but also asserts that it has no association with propaganda. This assertion aims to sustain Public Affairs' cloak of credibility. This protective public affairs garment, however, is woven with false threads. An honest look at military media operations reveals that Public Affairs is already engaged in counter-propaganda activities—censorship, message shaping, and spin.

A CASE FOR COUNTER-PROPAGANDA

Misinformation concerning Bosnia appeared in the media before the ethic cleansing started. Croatian propaganda described Serbian nationalists as Cetniks and presented the World War II (WWII) Cetnik leader as a genocidal monster. Serb propaganda described Croatian nationalists as Ustasa, and suggested that the Bosnian Muslims were either Nazis or fundamentalists, or both.[25]

Some analysts are convinced that it was propaganda-laced media that ignited the ethic flames that swept across Yugoslavia.[26] Media-espoused hate themes in the former Republic of Yugoslavia caused citizens to demonize neighbors, friends, and even family. Without benefit of truth-based counter-propaganda, the people of Yugoslavia have continued to villianize each other despite their recent history of peaceful coexistence.

Television has played a major role in the events leading to the war and disintegration of Yugoslavia. The political leaders in the republics blatantly used the media for their propagandist purposes and shaped public opinion in the direction that best suited their interests. During the Yugoslav era, media were used to support the existing political system and were controlled by the League of Communists in each republic.[27]

The new power holders, particularly in Serbia and in Croatia, simply stepped in for the old regime and increased their influence over the media. The few independent media organizations were sidelined and were not able to reach such massive audiences as the state-controlled television and radio did. The media was the tool that generated nationalist euphoria, ethnic hatred, and war psychosis. Media organizations included journalists who were devoted to the most extreme propagandist presentations. Such was the power of the media

Page 1482 of 3957

that many experts of the Yugoslav crisis are convinced that the war could not have erupted without media influence.[28].

In Bosnia-Herzegovina, the media were widely controlled by the ruling parties. The political elite used the media to govern the population and support nationalistic propaganda. However, few alternative media emerged in the Republika Srpska at the end of 1995. In the government-controlled territories, and particularly in Sarajevo, the media had more space to maneuver—but often only with the help of international donations, which in turn created an artificial media market.[29]

Broadcast news played a crucial role in events within the former Yugoslavia, but it helped to shape the policies of the international community. The war—first in Slovenia, then in Croatia, and finally in Bosnia—was played out in real time on television screens throughout the world. The images of tanks, refugees, concentration camps, and crimes against humanity shook the world and challenged the international community to do something.[30]

In 1997, the nationalist, state-run broadcast media in Bosnia painted NATO peacekeepers as an "occupying force." NATO commanders responded with threats to jam transmitters and then closed four transmission stations of Bosnian Serb radio and television because of what a United Nations spokesman called ongoing "distortion of the truth."

After the takeover of the towers, rival Bosnian Serb fractions in Pale and Banja Luka agreed to alternate daily broadcasts until parliamentary elections. The television network served as an effective counterweight to Serbian propaganda broadcasts. Studio interviews with opposing candidates and various international election observers presented listeners in and outside of the cities with a clear picture of the campaign. Although this balanced coverage helped bring some moderates to power, the counter-propaganda effort was too little too late.

With few independent electronic news sources and a public conditioned to obey authority, people readily accept what they are told. Obviously, leaders like Slobadam Milosevic know very well how to leverage broadcast media for propaganda purposes. He used Serb-controlled radio and television stations during his drive for a "Greater Serbia" to re-ignite Serb nationalism throughout the former Yugoslavia. Moreover, his unchecked messages of hate fed an international media that was hungry for news.

Some say it was "words, not bullets" that sparked the bloodshed in Bosnia-Herzegovina. According to Michael Ignatieff, "long before a shot was fired in Yugoslavia, the media of both Croatia and Serbia were readying their populations to think of the other side as vermin, insects, dogs, and other

Page 1484 of 3957

noisome creatures."[31] Several analysts have gone so far as to suggest some government journalists ought to be tried as war criminals.[32] Through uncontested broadcast propaganda, Milosevic successfully isolated the public. His news railed against the West and Serbia's neighbors, blaming them for the country's woes. Serbians became more xenophobic and convinced that former friends where their enemies. Counter-propaganda through independent media could have brought another perspective and offered hope by informing and educating the warring factions about how a democratic society works.

NOW KOSOVO

As of this writing, conflict rages in Kosovo. With over a million refugees fleeing their homes for sanctuary in nearby Albania and Macedonia, the U.S. military and North Atlantic Treaty Organization (NATO) forces are supporting a massive humanitarian relief effort. Yet little is being done in the way of counter propaganda to dispel lies and keep Kosovo's displaced citizens informed.

Some refugees have transistor radios and are able to tune in to the British Broadcasting Corporation (BBC) World Service, Radio Tirana, and other stations to find out what is happening. But even then, the information they receive is not specifically geared to their needs. Reliable information is clearly not

coming from the government-controlled media of President Slobodam Milosovic.

As NATO bombs rain on Belgrade, Serb state-run radio and television broadcasts call President Clinton "Adolf Clinton." NATO soldiers are referred to as "assassins." U.S. Secretary of State Madeleine Albright is "bloodthirsty."[33] The Serb leader's use of propaganda parallels that of Germay's WWII leader. Milosevic apparently desires to strengthen resolve of both his people and his military. Christopher Bennet says that "the key to Milosevic's rule and an understanding of modern Serb nationalism is the Serbian media and their sustained campaign to generate national hysteria. Indeed, the Serbian media have played a very similar role in Milosevic's Serbia to that played by the Nazi media in Hitler's Germany, though on account of technological advances in the intervening half century, their influence has been more pervasive and more insidious."[34]

As the Serbian propaganda machine has greater access to its population than NATO, we can expect it to also have a greater influence. The Serbian people have grown up with a strong bias in their media, and propaganda messages have had a lifetime to take hold. By implanting his views without challenge, Milosevic easily influences the Serbian people to do what he wants or lay blame on others. In the case of the Serbian military, it

appears soldiers are willing to fight and die based on Milosevic's propaganda.

Radio-Television Serbia voices its propaganda over images of bombed out buildings and anti-NATO rallies. This propaganda, which is closely controlled by Milosevic's regime, has already played a major role in the survival of the Yugoslav President. It will likely become even more crucial as the war drags on and life becomes more difficult. We can not afford to ignore Milosevic's rhetoric as it fuels nationalist frenzy. Serbs are now burning U.S. flags, destroying anything that is a symbol of a NATO country, and claiming they are already to fight to the death.

Some Serbian people may question the state radio and television broadcasts. But, they have few alternative messages that can cause serious doubt. Serbian media present a picture that Yugoslavia is winning the war and America and its NATO allies have gone mad. In the face of this distortion of the truth, President Clinton made an attempt at counter-propaganda. He sent a message to the Serbian people via satellite transmission. Clinton said the bombing was directed not at the Serbian people but at their leader. The US President's message contended with propaganda filters in Serbia. Most likely, few Serbians head the message, and even fewer believed the message.

Page 1487 of 3957

The fact is that there is almost no credible information countering Belgrade's view of its security operations. The only direct Western effort to respond to this monopoly is NATO's demand that Serb-controlled radio and television broadcast six hours of uncensored Western broadcasts a day. The majority of the Serbs and Kosovars rely on government station as their main news source, and, Milosevic can be counted on to deliver a daily dose of propaganda.

After Afghanistan, Somalia, and Rwanda, we should have learned to make propaganda one of the first casualties in a conflict. Balanced reporting is effective counter-propaganda ammunition. News broadcasts by the BBC, Voice of America, or Radio Free Europe could easily carry counter-propaganda messages aimed at shaping attitudes about the conflict in Kosovo. Counter-propaganda programming tailored to the local theater could help dispel rumors by challenging Serbian broadcasts. It could also help the Serbian military and people better understand NATO's intervention. Despite past experiences, however, we have not only been slow to demonize Milosevic but also slow to recognize the need for a PA counter-propaganda program as part of our overall military strategy.

Public affairs practitioners should give credence to how useful counter propaganda can be for shaping the security environment and alleviating crises. Better information access

Page 1488 of 3957

can help reduce conflict, particularly if aimed at the belligerents themselves. Some human rights sources believe Serb security forces might be less enthusiastic in their repression if warned by counter-propaganda broadcasts that they may be held accountable for their actions.

RECOMMENDATIONS

> *In a society under assault across its entire infosphere, it will become increasingly difficult for members of that society to verify internally the truth or accuracy of anything.... The End State may not be bloodless surrender but total disruption of the targeted society.*[35]
>
> *-George Stein*

We should openly acknowledgment that Public Affairs is already engaged in the fight against propaganda. This can spur debate on a Public Affairs strategy with ends, ways and means that are aligned for information operations in 2010.

The Public Information function of Public Affairs should include counter-propaganda operations as an objective. The aim should be to degrade the enemy's propaganda impact on the conflict and to maintain domestic and international support for U.S. military operations. Public Affairs must further legitimize its Public Information link to PYSOPS to facilitate a unified counter-propaganda effort. Public Information activities must use truth-based, counter-propaganda messages.

Page 1489 of 3957

PSYOP should conduct only offensive propaganda operations—at the theater and below in wartime. PSYOPS should assist Public Affairs with counter-propaganda activities at the strategic level.

Our military has the means to support this new Public Affairs role. So the Public Affairs infrastructure need not change. Additional instructors specializing in counter-propaganda at the Defense Information School (DINFOS) may be necessary.

Public Affairs organizations need not set up radio stations to conduct counter-propaganda. A number of independent media channels can be used for disseminating counter-propaganda messages. In the case of Kosovo, the BBC and Radio Tirana, independent media, are already transmitting Albanian-language broadcasts which reach much of the Balkans.

CONCLUSION

> The howitzers of the mass media ... will not long remain the property of the West: The world's skies will fill with private satellites, and channels of communications will continue to multiply....[36]

Whatever the means employed, it is questionable whether American public opinion can be induced to support military operations that do not support U.S. interests, especially when

adversaries use unchecked propaganda in the media to weaken American will.

The anticipated wars of the future will require Public Affairs to actively launch counter-propaganda operations. Such initiative will be critical to gaining and maintaining public support in the global information environment of the future. The Information Age is merging both internal and external audiences. Therefore, we should accept that counter-propaganda messages borne in the modern media atmosphere would impact both the enemy and friendly public. More important, lessons form Vietnam, DESERT STORM, and Bosnia teach future adversaries a common strategy: use propaganda in the media to attack the American will. This strategy of demoralization will remain viable for the foreseeable future.

The further the world advances toward embracing information technology, the less likely military Public Affairs can rely on traditional management of the media through censorship. A change in policy can bring the needed focus to public information objectives and support a specific counter-propaganda role. This does not mean that Public Affairs should mortgage its credibility that has been built on honesty for action supported by lies. To be effective tellers and protectors of the military story, Public Affairs must hammer out doctrinal change on an anvil of truth. By so doing, public information

operations can effectively counter propaganda in broadcast media and contribute to maintaining the national will for victory today and tomorrow.

DEPARTMENT OF THE ARMY
UNITED STATES ARMY INTELLIGENCE AND SECURITY COMMAND
FREEDOM OF INFORMATION/PRIVACY OFFICE
FORT GEORGE G. MEADE, MARYLAND 20755-5995

REPLY TO
ATTENTION OF:

FEB 27 2007

Freedom of Information/
Privacy Office

Mr. John Young
CRYPTOME
251 West 89th Street
Suite 6E
New York, New York 10024

Dear Mr. Young:

References:

a. Your Freedom of Information Act request of March 29, 2001, for information pertaining to the Internal Counterintelligence Program (ICIP), ZF011946W (#123F-06).

b. Our letter of December 20, 2005, informing you we needed additional time to review the records, and informing you we were unable to comply with the statutory 20-day time limit in processing your request.

c. Our letters of March 22, 2006 and January 30, 2007, informing you we were still reviewing the records you have requested and will respond to you once the review has been completed.

We have conducted checks of the automated Defense Central Index of Investigations and a search of the Investigative Records Repository to determine the existence of Army intelligence investigative records responsive to your request. We have located records pertaining to your request on ICIP, ZF011946W.

We have completed a mandatory declassification review in accordance with Executive Order (EO) 12958, as amended. As a result of our review, information has been sanitized and nine pages of records are denied in their entirety as the information is currently and properly classified SECRET and CONFIDENTIAL according to Sections 1.2(a)(2), 1.2(a)(3) and 1.4(c) of EO 12958, as amended. This information is exempt from the public disclosure provisions of the FOIA pursuant to Title 5 U.S. Code 552(b)(1). On March 9, 1999, the President exempted the file series in which these records are maintained from the automatic declassification provisions of EO 12958, Section 3.4, as amended, pertaining to classified records more than 25 years old. It is not possible to reasonably segregate meaningful portions of the withheld pages for release. The records are enclosed for your use. A brief explanation of the applicable sections follows:

Section 1.2(a)(2) of EO 12958, as amended, provides that information shall be classified SECRET if its unauthorized disclosure reasonably could be expected to cause serious damage to the national security.

Section 1.2(a)(3) of EO 12958, as amended, provides that information shall be classified CONFIDENTIAL if its unauthorized disclosure reasonably could be expected to cause damage to the national security.

Section 1.4(c) of EO 12958, as amended, provides that information pertaining to intelligence activities, intelligence sources or methods, and cryptologic information shall be considered for classification protection.

Since the release of the information would result in an unwarranted invasion of the privacy rights of the individuals concerned, this information is exempt from the public disclosure provisions of the FOIA per Title 5 U.S. Code 552 (b)(6).

In addition, we have sanitized information that would reveal the identity of confidential sources. This information is exempt from public disclosure pursuant to Title 5 U.S. Code 552 (b)(7)(D) of the FOIA. The significant and legitimate governmental purpose to be served by withholding is that a viable and effective intelligence investigative capability is dependent upon protection of confidential sources.

The withholding of the information described above is a partial denial of your request. This denial is made on behalf of Major General John Defreitas, III, the Commanding General, U.S. Army Intelligence and Security Command, who is the Initial Denial Authority for Army intelligence investigative and security records under the FOIA. You have the right to appeal this decision to the Secretary of the Army. If you wish to file an appeal, you should forward it to this office. Your appeal must be postmarked no later than 60 calendar days from the date of this letter. After the 60-day period, the case may be considered closed; however, such closure does not preclude you from filing litigation in the courts.

We have been informed by the FBI that their information is exempt from public disclosure pursuant to Title 5 U.S. Code 552 (b)(1) of the FOIA.

The withholding of the information by the FBI constitutes a partial denial of your request and you have the right to appeal this decision. If you decide to file an appeal, it should be sent to the Co-Director, Office of Information and Privacy, U.S. Department of Justice, 1425 New York Avenue, Northwest, Suite 11050, Washington, DC 20530-0001 within 60 days from the receipt of this letter. The envelope and the letter should be clearly marked "Freedom of Information Appeal" or Information Appeal." Please cite FBI FOI/PA #429014 assigned to your request so that it may be easily identified.

We are forwarding a copy of this letter to the FBI (FOI/PA #429014).

During the processing of your request, information was disclosed which is under the purview of another government agency. This office has no authority to release this record and it is being referred, along with your request, for appropriate action under the FOIA, and direct reply to you.

Additionally, we are coordinating with other government agencies concerning the releasability of their information contained in the records. We will inform you as to the releasability of the information upon completion of our coordination.

If you have any questions concerning this action, please feel free to contact this office at (301) 677-6410. Please refer to case #123F-06.

Sincerely,

Susan J. Butterfield
Director

CONTROL NUMBER

SUBJECT: Quarterly ACIP Report

OFFICE SYMBOL: DAMI-DOI-S

SUSPENSE:

DATE: 18 October 1972

ACTION REQUIRED: To provide USofA with the third quarterly ACIP report.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. BACKGROUND:

a. By Memorandum dated 8 February 72, the Under Secretary of the Army requested the Vice Chief of Staff, US Army to provide quarterly reports on all ACIP's (BLUE TAB B).

b. The second quarterly report, which contained a specially requested additional analysis, was submitted to the Under Secretary of the Army on 1 August 72 (BLUE TAB C).*

c. Written input from USAINTC for the current quarterly report is attached at BLUE TAB D.

2. DISCUSSION: Memorandum at BLUE TAB A to Under Secretary of the Army through the Vice Chief of Staff, US Army, provides required third quarterly report as desired by USofA memorandum of 8 February 1972.

3. RECOMMENDATION: That Memorandum (BLUE TAB A) be approved and signed.

* SECOND QUARTERLY REPORT PROMISED A COMPLETE ANALYSIS OF ACIPS IN FOURTH QUARTERLY REPORT. THIS IS THIRD QUARTER'S REPORT.

b. Ltr, ICDISO-OC, 18 Apr 72, subject as above.

2. (U) In compliance with reference a, above, the ACIP quarterly report for the period 1 July - 30 September 1972 is forwarded herewith.

3. (U)(e) The following operational and administrative control measures remain in effect concerning all reported ACIP to assure compliance with DOD and DA policies relative to the acquisition of information on non-DOD affiliated personnel:

a. Each ACIP is restricted to on-post target coverage of DOD affiliated personnel and utilizes employees or military personnel of the serviced command as sources. These constraints generally preclude the possibility of violations of current collection restrictions regarding non-DOD affiliated personnel.

b. Sources are selected from a civilian/military work force only after detailed assessment. Generally, only long term employees or personnel of known reliability and proven loyalty are selected for recruitment.

ICDISO-OC
SUBJECT: Quarterly Reporting of Aggressive Counterintelligence Program (ACIP) Operations (U)

c. Each individual and/or source involved in the conduct or control of each ACIP is briefed on current policies and restrictions pertaining to the program and program associated activities as concerns persons and organizations not affiliated with DOD.

d. ACIP reporting is scrutinized at each level of command to insure the acceptability of information provided or collected. Information of a questionable nature is not disseminated at the local level until a determination is made by this headquarters concerning the propriety of collection reporting and the information developed.

4.(U)~~(C)~~ Commanders of the facilities supported by the ACIP were queried in May 1971 concerning their recommendations relative to continuation of the program. Expressed desire for continuation was unanimous. To date, supported commanders' views remain unchanged and in view of this it is recommended that these programs be continued.

1. CANAL LOOP (OACSI approval - 16 Feb 72)

a. Location: Edgewood Arsenal, MD

b. Confidential Source Utilization: Five sources were used during this reporting period.

c. Information Obtained Off-post and Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: No information to indicate the existence of a hostile threat to the installation or a possible security hazard was developed during the reporting period.

e. Operational Status: Personnel transfers have created a turbulence in both the project control officer and project liaison officer functions. It is anticipated that the operation will become more effective after permanent personnel assignments are made in the near future.

a. Location: Fort Ritchie, MD

b. Confidential Source Utilization: Three sources were used during the reporting period.

c. Information Obtained Off-post and Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: No information to indicate the existence of a hostile threat to the installation or a possible security hazard was developed during the reporting period.

e. Operational Status: Continuation is recommended because of the installation's sensitive mission with DOD as the Alternate National Command Post and the role assigned to USAINTC of executing the Alternate Joint Communications Center Counterintelligence Program. The commander of Fort Ritchie and the US Army element located within Site "R" desires the continuation of the ACIP.

4. CANDID FROLIC (OACSI approval - 21 Dec 71)

a. Location: Fort Ord, CA

b. Confidential Source Utilization: Two confidential sources were used during the reporting period.

c. Information Obtained Off-post and Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: One of the sources identified two military personnel assigned to Fort Ord and a USMA cadet who were allegedly members of the Vietnam Veterans Against the War (VVAW) who distributed VVAW literature on a military post and who encouraged military personnel to attend VVAW meetings.

e. Operational Status: Fort Ord is the only major US Army training center on the West Coast and is a major test site for Modern Volunteer Army concepts. Additionally, the US Army Combat Developments Experimentation Command is located on the post with field testing conducted at Hunter-Liggett Military Reservation. Disruption of these elements could have a serious adverse impact upon the mission of the Army in that area. As the site of the Pvt Billy Smith "fragging" court-martial, Fort Ord has become a focal point for dissident/subversive activity for both local groups as well as supporters of Angela Davis from the San Francisco area. Because of the foregoing factors, recommend that CANDID FROLIC be continued.

6. GONDOLA STAR (OACSI approval - 17 Feb 72)

a. Location: Aberdeen Proving Ground, Aberdeen, MD

b. Confidential Source Utilization: Two confidential sources were used during this reporting period.

c. Information Obtained Off-post and Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: No information to indicate the existence of a hostile threat to the installation or a possible security hazard was developed during the reporting period.

e. Operational Status: A turbulent project control officer and project liaison officer situation which exists as a result of USAINTC reorganization and ensuing personnel transfers has prevented the program from attaining maximum effectiveness. This particular situation is expected to be resolved during the next quarter and increased coverage of the installation will be accomplished. High priority tenant activities covered by the ACIP include the US Army Test and Evaluation Command, Land Warfare Laboratory, Human Engineering Laboratory and the Ballistic Research Laboratory.

SECRET

ACTION SHEET

CONTROL NUMBER

SUBJECT: Quarterly Report to USofA re: Aggressive Counterintelligence Program (ACIP) Operations (U)

OFFICE SYMBOL: DAMI-DOI-S

SUSPENSE:

DATE: 31 July 1972

ACTION REQUIRED

To provide USofA with the second quarterly report on ACIPs.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. BACKGROUND:

a. By memorandum dated 8 February 1972, the Under Secretary of the Army requested that the Vice Chief of Staff, US Army provide quarterly reports on ACIPs (BLUE TAB D). He further requested that the report for the period ending 30 June 1972 provide a full analysis of the program.

b. The first quarterly report was submitted to the Under Secretary of the Army on 21 April 1972 (BLUE TAB C).

c. Written input from USAINTC for the current quarterly report is attached at BLUE TAB B. Subsequent coordination between USAINTC and OACSI representatives amplified their input which resulted in the information outlined in the memorandum to the Under Secretary of the Army (BLUE TAB A). To date, ICF in the total of $140.73 have been expended on these 11 ACIPs.

2. DISCUSSION: Memorandum to Under Secretary of the Army through Vice Chief of Staff, US Army, at BLUE TAB A provides required second quarterly report as desired by the USofA memorandum of 8 February 1972.

3. RECOMMENDATION: That Memorandum at BLUE TAB A be approved and signed.

MEMORANDUM THRU: VICE CHIEF OF STAFF, UNITED STATES ARMY

FOR: UNDER SECRETARY OF THE ARMY

SUBJECT: Aggressive Counterintelligence Program (ACIP) Operations (U)

1. Reference your memorandum of 8 February 1972, subject as cited.

2. The 11 ACIP operations reported to you in my 21 April 1972 memorandum, subject as above, remain in effect. No additional ACIP operations have been approved. A quarterly report of current operations is attached (TAB A). At TAB B is the evaluation you requested.

3. I do not believe we have yet had sufficient experience with this program under the new control limitations for a solid evaluation of its long-term merit. I will continue to submit quarterly reports to you on it, and will furnish you another evaluation at the end of the fourth quarter of operations under the new controls.

Information obtained:

Useful information was obtained, but except for prior warning of demonstrations at Fort Ord, California, no positive statements on specific security weaknesses or immediate threats to the Army were developed in this quarter. Inasmuch as these operations are a form of intensified security watchfulness, negative reports in themselves are frequently of value to a commander in planning for the security requirements of a given installation or activity. The placement and access of current sources, and those under consideration, are such that the chances of detecting a developing security threat situation in a sensitive installation or unit are greater with these sources operating.

Continuance of operations:

The eleven ACIP operations are being continued for the original stated purposes.

PROGRAM EVALUATION

Scope and Value: ACIP operations are defensive, on-post, security services, initiated at the request of a local commander. These operations are to provide commanders an intensified method of detecting internal security weaknesses and security threats to the supported command. Information is obtained from carefully selected sources who have on-post access to sensitive or critical defensive target areas. Activities to be covered are selected after joint discussions and agreements between the requesting commander and the supporting USAINTC element. Information is gathered through the use of both overt and covert sources who are selected from the DoD military or civilian workforce at the serviced installation. The primary values of ACIP operations are in the early warning and problem detection areas. The ultimate merit of the program cannot be assessed on a short term basis. Supported commands currently evaluate reported ACIPs as worthwhile security activities.

Number and placement of sources: To date, 31 sources have been recruited. (All sources were reactivated from operations which were in effect prior to curtailment of all ACIP operations in February 1971.) Continued recruitment and training of sources should produce, at a minimum, information for the supported command on personnel attitudes, possible disaffection, dissident activities and character weakness information of the type normally sought by foreign intelligence spotter personnel. During contacts, sources are debriefed, trained as necessary, and given specific guidance on future reporting objectives. In all cases, emergency contact procedures exist to insure rapid notification of significant information.

Adequacy of controls: DIRC inspections of Army intelligence field elements, plus inspections by OACSI and of DA field commands, show strict operational compliance with pertinent directives, keen awareness of DIRC investigative policies, and extreme caution about any acts which might cause criticism to the Army. In addition, the following control measures have been imposed upon USAINTC and subordinate field elements:

a. The ACIP is restricted to on-post target coverage of DoD affiliated personnel utilizing employees of the serviced command as sources. These restraints reduce to a minimum the possibility of violations of current collection restrictions regarding non-DoD affiliated personnel.

b. Sources are selected from the military/civilian workforce only after a long and detailed assessment. Normally only long-term employees of known reliability and loyalty are selected for recruitment.

HQDA (DAMI-DOI-S)
WASH DC 20310

1. (U) References:

a. Letter DAMI-DOI-S, 8 March 1972, subject as above.

b. Letter ICDISO-OC, 18 April 1972, subject as above.

2. (U) Forwarded herewith in compliance with reference a, above, is the ACIP quarterly report for the period 1 April 1972 - 30 June 1972.

3. (U) ~~(C)~~ The following operational and administrative control measures remain in effect concerning all reported ACIPs to assure compliance with DoD and DA policies relative to the acquisition of information on non-DoD affiliated personnel:

a. Each ACIP is restricted to on-post target coverage of DoD affiliated personnel and utilizes employees of the serviced command as sources. These constraints generally preclude the possibility of violations of current collection restrictions regarding non-DoD affiliated personnel.

b. Sources are selected from a civilian/military work force only after long and detailed assessment. Generally, only long term employees of known reliability and proven loyalty are selected for recruitment.

c. Each individual and/or source involved in the conduct or control of each ACIP is briefed on current policies and restrictions pertaining to the program and program associated activities as concerns persons and organizations not affiliated with DoD.

d. ACIP reporting is scrutinized at each level of command to insure the acceptability of information provided or collected. Information of a questionable nature is not disseminated at the local level until a determination is made by this headquarters concerning the propriety of collection reporting and informational products.

4. (~~S~~)(U) Commanders of the facilities supported by the ACIP were queried in May 1971 concerning their recommendations relative to continuation of the program. Expressed desire for continuation was unanimous. To date, supported commanders' views remain unchanged and in view of this it is recommended that these programs be continued.

1. CANAL LOOP (OACSI Approval - 16 Feb 72)

a. Location: Edgewood Arsenal, Edgewood, MD

b. Confidential Source Utilization: Contact with five confidential sources formerly used in the program has been made. Four have been reactivated and regularly scheduled contacts effected. One former source has been transferred to another DoD installation and has been terminated.

c. Information Obtained Off-post and Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: While little information of substantive value has been developed to date, confidential and overt sources of information will continue activity in support of coverage of sensitive targets designated by the supported commander.

e. Operational Status: Although regular contact has been established with all former sources, full utilization has been impeded by Army Intelligence personnel transfers and the requirement to train newly assigned personnel involved in source contact. Continuation of the ACIP CANAL LOOP is recommended because of the extreme sensitivity of the target installation.

4. CANDID FROLIC: (OACSI Approval 21 Dec 71)

a. Location: Fort Ord, CA

b. Confidential Source Utilization: Regularly scheduled meetings were conducted with one confidential source during the reporting period. One other prospective source has been spotted and approved for recruitment.

c. Information Obtained Off-post and Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: Early warning was provided the Commanding General, Fort Ord, concerning the 29 April 1972 demonstration outside the main gate of Fort Ord, in support of Billy Dean Smith, and the 20 May 1972, Armed Forces Day March against the Presidio of Monterey.

e. Operational Status: As the only major US Army training facility on the West Coast; a test post for the Modern Volunteer Army concept, and the site of the Billy Dean Smith "fragging" trial, Fort Ord remains the focal point for dissident and/or subversive activity from both local radicals and from revolutionary elements in the San Francisco area. CANDID FROLIC is providing the CG, Fort Ord, with early warning type information upon which he can plan preventive measures to preclude disruption of post activities. Recommend continuation of ACIP CANDID FROLIC.

9. LANYARD MOOD: (OACSI Approval - 22 Dec 71)

a. Location: Defense Language Institute East Coast Branch, Anacostia Naval Annex, Washington, DC

b. Confidential Source Utilization: None

c. Information Obtained Off-post and Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: While little information of substantive value has been developed to date, conventional and overt sources of information will continue activity in support of coverage of sensitive targets designated by the supported commander.

e. Operational Status: Reporting under LANYARD MOOD is concentrated principally on classroom monitoring by language students, the majority of whom are servicemen assigned Army Intelligence. The school is currently between classes and new student rosters are being screened for potential student sources. Although the DLI branch schools are relatively non-sensitive installations, the target represented by the language students requires some form of coverage or monitoring as many of the servicemen are destined for sensitive assignments in Communist Bloc countries. Recommend continuation of ACIP LANYARD MOOD.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Quarterly Report to US of A Re: Aggressive Counter-intelligence Program (ACIP) Operations

OFFICE SYMBOL: DAMI-DOI-S

SUSPENSE:

DATE: 17 April 1972

ACTION REQUIRED: To provide USofA with the initial Quarterly Report on ACIP's

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. BACKGROUND:

a. By Memorandum dated 8 Feb 72, the US of A requested that the Vice Chief of Staff, Army provide a Quarterly Report on Aggressive Counterintelligence Programs (TAB B). YELLOW

b. By note and referal slip dated 10 Feb 72 the VCofS, Army forwarded the action to the ACSI and directed that required reports and recommendations be submitted through his office (TAB C). YELLOW

c. By letter dated 8 Mar 72, CG USAINTC was formally tasked to provide required information to this office (TAB D) YELLOW in accordance with provisions of the US of A Memorandum.

d. By letter dated 14 Apr 72, CG USAINTC transmitted the required data to OACSI, DA (TAB E). YELLOW

2. DISCUSSION: Memorandum to USofA through VCofS, Army at TAB A YELLOW provides required report.

3. RECOMMENDATION: That memorandum at TAB A YELLOW be approved and signed.

DAMI-DOI-S

SUBJECT: Quaterly ACIP Report

1. USAINTC submitted their input for the quarterly ACIP report on 14 Apr 72. As result DAMI-DOI-S prepared the required package to forward their report to CSA.

2. On 17 Apr 72 Col IADOROSA, USAINTC called with request that USAINTC be allowed to expand their initial report. He explained that BG Epp did not get to see original reports prior to dispatch and was not happy with them when he finally did get to see them.

3. By letter ,undated, USAINTC provided DAMI-DOI-S with revised reports for each ACIP. Reports were received from USAINTC LN on 19 Apr 72. Per phoncon with Mr Arnold, USAINTC, I established the date of 18 Apr 72 as that which should be placed on the undated letter transmitting the reports received on 19 APR.

21 APR 1972

MEMORANDUM THRU: VICE CHIEF OF STAFF, UNITED STATES ARMY

FOR: UNDER SECRETARY OF THE ARMY

SUBJECT: Aggressive Counterintelligence Program (ACIP) Operations

1. In your 8 February 1972 Memorandum, subject as cited, you requested quarterly reports on status of ACIP operations. Attached are reports on those operations in progress for the quarter ending 31 March 1972.

2. Your Memorandum accepted the fact that the closing date of the first quarter report would be too soon for any sound evaluation of these projects. This is borne out by attached reports. They indicate a cautious selection of potential confidential sources. Such a process is necessary for ACIP operations to provide the Army security threat information not obtainable through routine counterintelligence investigative and liaison work.

HQDA (DAMI-DOI-S)
WASH DC 20310

WARNING NOTICE: Sensitive Sources and Methods Involved

1. (U) Reference letter DAMI-DOI-S, 8 Mar 72, subject as above.

2. (U) Forwarded herewith in compliance with referenced letter is the quarterly report covering the period 1 Jan 72 - 31 Mar 72.

3. (U) ~~(C)~~ The following comments are submitted in order to better portray the role of the ACIP in enhancement of the security of the supported commands:

a. The Aggressive Counterintelligence Program is a defensive, on-post security service initiated at the request of the local commander. It provides a monitoring or surveillance of sensitive or critical areas of a command which are selected or recommended for ACIP coverage by the serviced commander. This is accomplished through the use of both overt and covert sources of information, selected exclusively from the DoD civilian and military workforce at the serviced installation.

b. The ACIP must be considered a long-range operation if it is to provide reliable, accurate and continuing access to information not obtainable through routine collection efforts.

4. (U) ~~(C)~~ Due to the lapse of time since the ACIPs were suspended, considerable effort and time is involved in the reactivation of approved ACIPs. ACIPs in the process of reactivation by this Command are subjected to continuous scrutiny to insure that they fall within the parameters of

ACIP QUARTERLY REPORT

Period Ending: 31 March 1972

WARNING NOTICE: Sensitive Sources and Methods Involved

1. (U) NICKNAME: LENTIL MONKEY (U)

2. (U) LOCATION: Defense Language Institute, West Coast, Monterey, CA

3. (U) DATE APPROVED: 26 October 1971, per ACSI letter DAMI-DOI-S, subject: Aggressive Counterintelligence Program (ACIP) Operations.

4. (U)(C) BACKGROUND:

ACIP coverage of the Defense Language Institute, West Coast (DLIWC) was initiated by letter DLIWC, dated 11 September 1967, subject: Request for Aggressive Counterintelligence Support. Operation was suspended on 17 February 1971 in compliance to ACSI Memorandum, dated 16 February 1971, subject: Suspension of Certain Army Counterintelligence Programs. Information developed by the ACIP is provided the serviced command on a regular basis by the Project Liaison Officer in his regular contact with the installation security office. Formal quarterly briefings are given the Commander of the serviced installation or his designated ACIP Coordinator during which the progress of the program is discussed and recommendations made for future coverage.

5. (C) THREAT ANALYSIS:

a. General: The Defense Language Institute, West Coast, conducts training in a variety of foreign languages for students from all the military services.

b1

CONFIDENTIAL

47

JACL 1

b. Indicated Threat: Previous information developed through this ACIP revealed at least ten instances of instructors visiting communist bloc countries and being contacted by foreign nationals. Two of these visits resulted in direct solicitation of information concerning DLIWC. Future reporting will determine whether or not a threat continues to exist at this installation.

6. (U)(C) CONFIDENTIAL SOURCES UTILIZED: None. The program was in the initiation phase during this reporting period. One Confidential Source is to be recruited in April 1972. Additional sources for possible inclusion into the operation are presently under assessment. All sources recruited will be civilian or military personnel assigned to the installation.

7. (U) INFORMATION OBTAINED OFF-POST AND REPORTED ON NON-AFFILIATED CIVILIANS: None

8. (U)(C) USEFUL INFORMATION OBTAINED: Review of personal records identify three individuals, all members of the faculty of the Czechoslovakian Language Department, Defense Language Institute, West Coast (DLIWC), Presidio of Monterey, California, as possible targets of hostile intelligence.

9. (U)(C) OPERATIONAL STATUS: Operation should be continued. Faculty members of DLIWC must be considered potentially lucrative targets of hostile intelligence agencies which may be operating in the California area; especially with the impending establishment of a USSR Consulate in San Francisco, California.

ACIP QUARTERLY REPORT

Period Ending: 31 March 1972

WARNING NOTICE: Sensitive Sources and Methods Involved

1. (U) NICKNAME: CANDID FROLIC (U)

2. (U) LOCATION: Fort Ord, CA

3. (U) DATE APPROVED: 21 December 1971 per ACSI letter DAMI-DOI-S, subject: Aggressive Counterintelligence Program (ACIP) Operations (U).

4. (U)(~~C~~) COORDINATION: ACIP coverage of Fort Ord, CA was requested by the Commanding General, 26 November 1971 per letter AMNOR-B, HQS, Fort Ord, subject: Request for Aggressive Counterintelligence Support (U). Approval to initiate the program was contained in ACSI letter cited in paragraph three above. Information developed by the ACIP is provided the serviced command on a regular basis by the Project Liaison Officer in his normal contact with the installation security/intelligence office. Formal quarterly briefings are given the Commander of the serviced installation or his designated ACIP Coordinator, during which the progress of the program is discussed and recommendations made for future coverage.

5 (U)(~~C~~) THREAT ANALYSIS: ACIP CANDID FROLIC was initiated to provide the Commanding General, Fort Ord with a substitute Special Counter-intelligence Coverage to replace that formerly provided by GRADE PROGRESS, an Offensive Counterintelligence Operation currently under suspension. Fort Ord as the only major US Army training facility on the West Coast and as a test post for the Modern Volunteer Army is under constant, concerted attack by local anti-war and anti-Army civilian organizations. These organizations have extended their operations on-post under the legal guise of soldier counselling. An additional factor which contri-butes to the threat to the installation is the trial of PVT Billy Dean Smith, now in the Fort Ord Confinement Facility accused of the murder of two Army officers in Vietnam. Radicals and other groups have already given this impending event wide publicity and are attempting to charac-terize the trial as racial oppression. These efforts are expected to find adherents among the population of the Fort Ord complex who will undoubtedly attempt disruption either by outside direction or on their own initiative. Already, several off-post demonstrations, at the Fort Ord main gate, connected with this case have been conducted; a building which is being rehabilitated as a court room for the trial has been set afire and damaged by arsonist(s); and disruptive gatherings have been held on post to discuss and protest the trial.

6. (U)(~~C~~) CONFIDENTIAL SOURCES UTILIZED: None. The program was in the initiation phase during this first quarter. However, the first Confidential

CONFIDENTIAL

Source has been recruited and four others are under development. In addition, seven individuals are currently under assessment. Only DoD civilian and military personnel assigned the installation are recruited as confidential sources.

7. (U) INFORMATION OBTAINED OFF-POST AND REPORTED ON NON-AFFILIATED CIVILIANS: None.

8. (U)(C) USEFUL INFORMATION OBTAINED: During the reporting period, the following useful information was obtained through official liaison with local investigative agencies and through overt contact sources on the military installation. An Army chaplain's assistant is alleged to be assisting the MLP on-post at Fort Ord. In addition, a JAGC officer is alleged to have referred military personnel stationed at Fort Ord to PCS/MLP for legal counsel in obtaining discharges from the military service.

9. (U)(C) OPERATIONAL STATUS: It is recommended that the operation be continued in order to provide the Commanding General, Fort Ord, with early warning information upon which to base counter-actions against local dissident/subversive organizations who, through recruitment of servicemen, have extended their operations onto the government facility.

ACIP QUARTERLY REPORT

Period Ending: 31 March 1972

~~WARNING NOTICE: Sensitive Sources and Methods Involved~~

1. (U) NICKNAME: LANYARD MOOD (U)

2. (U) LOCATION: Defense Language Institute, East Coast, Anacostia Annex, US Naval Station, Washington, DC

3. (U) DATE APPROVED: 22 December 1971, per ACSI letter, DAMI-DOI-S, subject: Aggressive Counterintelligence Program (ACIP) Operations.

4. (U) ~~(C)~~ BACKGROUND:

ACIP coverage of Defense Language Institute, East Coast (DLI, EC) was initiated by letter request DLIEC, dated 16 November 1971, subject: Request for Aggressive Counterintelligence Support. It was suspended on 17 February 1971 by ACSI Memorandum dated 16 February 1971, subject: Suspension of Certain Army Counterintelligence Programs. Information developed by the ACIP is provided the serviced command on a regular basis by the Project Liaison Officer in his regular contact with the installation security office. Formal quarterly briefings are given the Commander of the serviced installation or his designated ACIP Coordinator during which the progress of the program is discussed and recommendations made for future coverage.

5. (C) THREAT ANALYSIS:

The Defense Language Institute East Coast Branch (DLIEC) conducts training in approximately 50 languages for an average student body of 1100, with responsibility for classroom training being placed upon civilian contract schools. No classified material is provided DLIEC instructors or students; therefore, there is no justification for the program exclusively to protect the security of the facility.

b1

The students reside at scattered locations throughout the Washington, DC area and the administrative control and supervision over them is decentralized among several headquarters.

GROUP 3
Downgraded at 12 year intervals; not automatically declassified

CONFIDENTIAL

51

Tab C 3

CONFIDENTIAL

Most of the students are young, impressionable servicemen, subjected to minimum military control, who are encouraged to socialize with their instructors and to attend functions at the various embassies and legations in the Washington area. The instructors are principally alien employees of a civilian contract school over whom DLIEC exercises virtually no administrative or supervisory control.

b1

6. (C) CONFIDENTIAL SOURCES UTILIZED: Spotting and assessing program for the recruitment of Confidential Sources has been instituted. The recruitment of sources will be limited to DoD civilians and military personnel assigned to the school.

7. (U) INFORMATION OBTAINED OFF-POST AND REPORTED ON NON-AFFILIATED CIVILIANS: None

8. (C) USEFUL INFORMATION OBTAINED: None. Sources have not been reactivated.

9. (C) OPERATIONAL STATUS: Aggressive Counterintelligence Program LANYARD MOOD should be continued because of the extreme sensitivity of the personnel assigned the installation. Current activity centers around the recruitment of sources to assure coverage of sensitive areas designated by the responsible commanders.

ACIP QUARTERLY REPORT

Period Ending: 31 March 1972

WARNING NOTICE: Sensitive Sources and Methods Involved

1. (U) NICKNAME: CANCER PORCH (U)

2. (U) LOCATION: Defense Language Institute Southwest, Biggs Field, Ft. Bliss, TX

3. (U) DATE APPROVED: 28 December 1971, per ACSI letter DAMI-DOI-S, subject: Aggressive Counterintelligence Program (ACIP) Operations.

4. (U) ~~(C)~~ BACKGROUND:

ACIP coverage of the Defense Language Institute Southwest (DLI, SW) was requested by letter DLISC-S2/3, DLI, SW, dated 23 October 1967, subject: Request for Aggressive Counterintelligence Support and was instituted by this Command in 1968. Coverage was suspended on 17 February 1971 per ACSI Memorandum, dated 16 February 1971, subject: Suspension of Certain Army Counterintelligence Programs. Information developed by the ACIP is provided the serviced command on a regular basis by the Project Liaison Officer in his regular contact with the installation security intelligence office. Formal quarterly briefings are given the Commandant of the serviced installation or his designated ACIP Coordinator during which the progress of the program is discussed and recommendations made for future coverage.

5. (~~C~~) THREAT ANALYSIS:

a. General: The Defense Language Institute Southwest Branch (DLISW) is a subordinate facility of Headquarters, Defense Language Institute (DLI), and was activated 1 August 1966, to provide Vietnamese Language instruction to Department of the Army personnel. The instructors are native born Vietnamese, employed by civilian contract schools, over whom the DLI exercises little or no control. No classified material is provided DLISW instructors or students; therefore, there is no justification for the program exclusively to protect the security of the facility. Principal cover emphasis is placed upon the protection and/or the surveillance of the military student body which consists primarily of young impressionable servicemen.

53

55

~~CONFIDENTIAL~~

GROUP 3

Page 4

the majority of whom are faced with a Southeast Asia assignment. Many of these servicemen have a preconceived opposition to the US policy in Southeast Asia, while others, apprehensive about their pending assignment to Vietnam, are susceptible to the influences of their fellow students or to subtle suggestions made by their Vietnamese instructors. Information has been received from the Vietnamese Government indicating that a group of "left-wing" Vietnamese students were planning to use Vietnamese Language instructors to encourage resistance to the US policy in Southeast Asia. Although the school has an established student/instructor non-fraternization policy, the close, long-term contact initiated during prolonged courses of instruction often results in the establishment of close friendships.

b1

6. (C) CONFIDENTIAL SOURCES UTILIZED: Two prospective Confidential Sources, with placement and access, have been spotted and are currently being assessed and developed. Sources utilized in the ACIP are DoD civilian and military employees of the serviced facility.

7. (U) INFORMATION OBTAINED OFF-POST AND REPORTED ON NON-AFFILIATED CIVILIANS: None

8. (C) USEFUL INFORMATION OBTAINED: None. Sources have not been reactivated.

9(U)(C) OPERATIONAL STATUS: Aggressive Counterintelligence Program CANCER PORCH should be continued because of the extreme sensitivity of the personnel assigned to the installation. Current activity centers around the reactivation of former confidential sources and the recruitment of new sources to assure coverage of sensitive areas designated by the responsible commanders.

CONFIDENTIAL

7. (U) INFORMATION OBTAINED OFF-POST AND REPORTED ON NON-DoD AFFILIATED CIVILIANS: None

8. (U) USEFUL INFORMATION OBTAINED: Because the operation is in its initial phase of reinitiation, no useful information of counterintelligence significance was developed.

9. (C) OPERATIONAL STATUS: This operation should be continued because of the sensitivity of the installation and the criticality of the mission it performs for the Department of the Army. Current activity includes the briefing of the Commanding General, USAMC, who has assumed his position since the suspension of the operation. Following this briefing, recontact of former confidential sources will be attempted.

ACIP QUARTERLY REPORT

Period Ending: 31 March 1972

~~WARNING NOTICE: Sensitive Sources and Methods Involved~~

1. (U) NICKNAME: CANAL LOOP (U)

2. (U) LOCATION: Edgewood Arsenal, MD

3. (U) DATE APPROVED: 16 February 1972, per ACSI letter DAMI-DOI-S, subject: Aggressive Counterintelligence Program (ACIP) Operations.

4. (U) BACKGROUND:

ACIP coverage of Edgewood Arsenal was initiated 15 June 1965 by letter of request of the Commanding Officer, Edgewood Arsenal, thru the Commanding Generals, US Army Munitions Command and US Army Materiel Command. On 17 February 1971, CANAL LOOP was suspended per instructions contained in ACSI Memorandum dated 16 February 1971, subject: Suspension of Certain Army Counterintelligence Programs. This operation was reinitiated per authority contained in letter cited in paragraph three above. Information developed by the ACIP is provided the serviced command on a regular basis by the Project Liaison Officer in his regular contact with the installation security office. Formal quarterly briefings are given the Commander of the serviced installation or his designated ACIP Coordinator during which the progress of the program is discussed and recommendations made for future coverage.

6. (C) CONFIDENTIAL SOURCES UTILIZED: Initial contact made with five Confidential Sources previously utilized prior to suspension of operation. Activation of these sources will take place following further assessment. Sources recruited for utilization within the AKIP are limited to DoD civilians and military personnel assigned the serviced facility.

7. (U) INFORMATION OBTAINED OFF-POST AND REPORTED ON NON-AFFILIATED CIVILIANS: None

8. (C) USEFUL INFORMATION OBTAINED: None. Sources have not been reactivated.

69

2 69

CONFIDENTIAL

9. (C) OPERATIONAL STATUS: Aggressive Counterintelligence Program CANAL LOOP should be continued because of the extreme sensitivity of the installation and because of the potential threat to the National security posed by the sensitive mission performed by Edgewood Arsenal. Current activity centers around the reactivation of former confidential sources and the recruitment of new sources to assure coverage of sensitive areas designated by the responsible commanders.

8 FEB 1972

MEMORANDUM FOR THE VICE CHIEF OF STAFF
United States Army

SUBJECT: Aggressive Counterintelligence Program (ACIP) Operations

On 4 December 1971 you forwarded to me a memorandum from the Assistant Chief of Staff for Intelligence, SUBJECT: Counterintelligence Policy Guidance, which informed me of the ACSI's decision to reactivate certain Aggressive Counterintelligence Program (ACIP) Operations. Attached to the memorandum was the operation plan for one such operation. I have reviewed that memorandum and the attached plan, and although I appreciate the conscientious steps which have been taken to assure adherence to current policies in this area, I remain concerned that this program may be placing us in a highly vulnerable position.

DoD Directive 5200.27 and the implementing Army policy letter dated 1 June 1971 impose two restrictions which are particularly relevant to ACIP operations. First, they require that there be "no covert or otherwise deceptive surveillance or penetration of civilian organizations" without the prior approval of the Chairman, DIRC (now the Assistant Secretary of Defense (Comptroller)). Second, they prohibit assigning DoD personnel "to attend public or private meetings, demonstrations, or other similar activities for the purpose of acquiring information the collection of which is authorized" without my prior approval, except in emergency situations. These prohibitions apply whether or not the formal "target" of the operation is affiliated with the Department of Defense. Although the ACSI letter approving the first reactivated ACIP operation incorporates these restrictions by reference (paragraph 3a), the operation plan and related documents obviously assume that confidential sources working in the operation may obtain and report information which they receive in the course of activities off military installations. While the plan prohibits extending the collection effort "directly" to non-DoD personnel (paragraph 4a(a)), and while the ACSI approval letter prohibits making non-DoD personnel "targets" of off-post surveillance, I would assume that it is entirely possible that in the course of their off-post activities confidential sources might obtain and report information

on non-affiliated civilians. Although such activity might not in all situations be forbidden by DoD Directive 5200.27, it is clearly on the borderline, and I therefore feel it is very important that these operations be closely supervised and tightly controlled.

In order to make an informed decision about whether further controls are necessary (including possible Under Secretary or DIRC review of each operation), I would appreciate your taking the following steps:

1. Beginning March 31, 1972, I would like to receive a quarterly report containing the following information on each ACIP operation in progress at any time during the reporting period: Date approved, code-name, location, number of confidential sources used during reporting period, number of instances in which information on non-affiliated civilians is obtained off-post and reported, and a brief narrative statement explaining whether useful information was obtained during the reporting period, whether the operation is to be continued, and if so, why. These reports may be submitted 30 days after the close of the calendar quarter which they cover.

2. With the second quarterly report, which will be due July 31, 1972, I would like to receive a full analysis of this program, including its value in terms of producing useful information and the adequacy of the controls which have been imposed. Recommendations for any further necessary controls should be included.

OFFICE OF THE CHIEF OF STAFF
WASHINGTON, D.C. 20310

2 November 1973

MEMORANDUM FOR: UNDER SECRETARY OF THE ARMY

SUBJECT: Aggressive Counterintelligence Program (ACIP) Operations (U)

1. (U) Reference is made to memorandum, Under Secretary of the Army, dated 8 February 1972, subject as above.

2. (U~~C~~) The nine Aggressive Counterintelligence Program (ACIP) Operations reported by memorandum to you last quarter, all remain active. Two new operations CANARY STONE at Dugway Proving Ground, Utah and CENTAUR RACE at Fort Lewis, Washington were requested by the installation commanders, approved by ACSI, DA and implemented during the reporting period. These operations bring the total to 11 active ACIP's. At present, five ACIP proposals have been submitted by CONUS field commanders for consideration. The report of current operations for the quarter ending 30 September 1973 is attached.

3. (U~~C~~) The primary values of ACIP operations are in their potential for early warning and detecting internal security weakness and security threats to the supported command. Inasmuch as these operations are a form of intensified security watchfulness, negative reports in themselves are frequently of value to a commander in planning for security requirements of a given installation or activity.

d. Useful Information Obtained: No information to indicate the existence of a hostile threat to the installation or a possible security hazard was developed during the reporting period.

e. Operational Status: Seven additional students are being processed for use as confidential sources, and 20 conventional sources were recruited for broad coverage of target language departments. In addition, all of the 132 class monitors have been given SAEDA briefings and directed to report any incidents occurring in the classes.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Aggressive Counterintelligence Program Operations

OFFICE SYMBOL: DAMI-DOI-S

SUSPENSE:

DATE: 19 July 1973

ACTION REQUIRED: To obtain approval of a quarterly report.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. BACKGROUND:

a. By memorandum dated 8 February 1972 (GREEN TAB B) the Under Secretary of the Army requested the Vice Chief of Staff, US Army, provide quarterly reports on all ACIPs.

b. This is the fifth such quarterly report.

c. USAINTC Input is at GREEN TAB C.

2. DISCUSSION: The memorandum at GREEN TAB A forwards a memorandum to the VCSA to forward the report for the quarter ending 30 June 1973.

3. RECOMMENDATION: That the memorandum to the VCSA at GREEN TAB A be approved and signed.

1 August 1973

MEMORANDUM FOR: UNDER SECRETARY OF THE ARMY

SUBJECT: Aggressive Counterintelligence Program Operations

1. Reference memorandum, Under Secretary of the Army, dated 8 February 1972, subject as above.

2. Of the 11 Aggressive Counterintelligence Program (ACIP) Operations reported to you by memorandum from this office, dated 4 May 1973, subject as above, nine remain in effect. Operation CANCER PORCH at the Defense Language Institute, Southeast Branch was terminated with the closing of the activity on 31 May 1973. Operation CANDID FROLIC at Fort Ord, California, was terminated on 12 June 1973 at the request of the installation commander. No new ACIP operations were initiated. The report of current operations for the quarter ending 30 June 1973 is attached.

3. The primary values of ACIP operations are in their potential for early warning and for detecting internal security weakness and security threats to the supported command. Inasmuch as these operations are a form of intensified security watchfulness, negative reports in themselves are frequently of value to a commander in planning for security requirements of a given installation or activity.

Off-post Information

Operational LENTIL MONKEY obtained information off-post by coincidence and not as part of the operation. A source who was accompanying his student group on a field trip was among those of the group shown pictures of three Czech females who were looking for pen-pals. The source reported the incident.

FORT HOLABIRD, MARYLAND 21219

JUL 12 1973

ICDO-OP

SUBJECT: Quarterly Reporting of Aggressive Counterintelligence Program (ACIP) Operations (U)

HQDA (DAMI-DOI-S)
WASH DC 20310

1. (U) References:

a. Letter, DAMI-DOI-S, 8 March 1972, subject as above.

b. Letter, ICDISO-OC, 11 October 1972, subject as above.

c. Letter, ICDO-OP, 11 April 1973, subject as above.

2. (U) In compliance with reference a, above, the ACIP quarterly report for the period 1 April - 30 June 1973 is forwarded herewith.

3. (U) Operational and administrative control measures outlined in reference b, above, remained in effect during the reporting period. There was one instance of acquisition of information on non-DoD affiliated personnel, described in the inclosure covering LENTIL MONKEY (U).

4. (U) Supported commanders continue to indicate satisfaction with the program. They view the lack of contradictory information as reassurance that their employees are observing security regulations, and that no apparent hostile intelligence activities have been mounted against the installation. A certain amount of suitability information was developed during the reporting period at some of the installations, but was either minor or had not yet been confirmed. In such cases, the information is not passed to the supported commander.

11. LENTIL MONKEY: (OACSI Approval - 26 Oct 71)

a. Location: Defense Language Institute West Coast Branch
Presidio of Monterey, CA

b. Confidential Source Utilization: Three sources were utilized during the reporting period, but all were eventually terminated due to graduation.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: On 18 May 73, students of a Czech class visited a Czech restaurant in San Francisco on a field trip. While they were there, the owner showed the students pictures of three girls residing in Czechoslovakia who were looking for American pen-pals. Each of three students received the name and address of one of the girls. One of the students who received this data was a Confidential Source, and reported the incident. The other two students are now en route to Army Security Agency school at Fort Devens, MA, and will eventually be assigned in USAREUR.

d. Useful Information Obtained: The above information assumes significance only if this proves to be an operational technique of Czech Intelligence. Consideration is being given to utilizing the source, now on TDY at Fort Huachuca, AZ, to probe this situation by establishing correspondence with the Czech girl. Under the circumstances, reporting this information is not considered a violation of the 1 June 71 letter.

e. Operational Status: Just as in LANYARD MOOD, the combination of alien-born instructors and students destined for sensitive assignments overseas is considered to offer a challenge to hostile intelligence. Additional MI students have reported to the institute, and no problems are anticipated in recruiting new sources.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Quarterly ACIP Report

OFFICE SYMBOL: DAMI-DOI-S

SUSPENSE:

DATE: 23 April 1973

ACTION REQUIRED: To forward memorandum requesting VCSA sign memorandum to USA.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. BACKGROUND:

a. By Memorandum dated 8 February 1972, the Under Secretary of the Army requested the Vice Chief of Staff, US Army provide quarterly reports on all ACIP's (BLUE TAB B).

b. The fourth quarterly report for 1972 was submitted to the Under Secretary of the Army on 12 February 1973 (BLUE TAB C).

c. Written input from USAINTC for the current quarterly report is attached at BLUE TAB D.

2. DISCUSSION:

a. Word received from the SGS on 1 February 73 revealed the new VCSA desires to personally sign all memoranda to the Under Secretary of the Army. How long this new policy is to be effective is currently unknown. Based on DA memoranda 340-15 and 340-17, the ACSI has signed previous memoranda concerning this subject for the VCSA.

b. The memorandum at BLUE TAB A forwards a memorandum to the VCSA requesting he sign and forward to the Under Secretary of the Army, the first quarterly ACIP report for 1973. Per agreement SGS and DAMI, this same procedure was used to forward the previous quarterly report.

3. RECOMMENDATION: That the Memorandum to the VCSA at BLUE TAB A be approved and signed.

Information Obtained:

a. During the first quarter of 1973, none of the ACIP operations produced information which would indicate the existence of an active hostile threat to the supported installation nor were any reports received concerning potential security hazards to the supported installations. As emphasized in each quarterly report submitted to date, ACIP operations are a form of intensified security watchfulness. As such, the lack of reportable information from these operations is also of value to a commander in planning for his security requirements. The placement and access of current sources, and those under consideration, are such that the chances of detecting a developing security threat situation in a sensitive installation or unit are greater with these sources already operating.

b. Significantly, supported commanders have voiced satisfaction with ACIP operational results to date and have reiterated their desire that these operations continue.

Continuance of Operations:

The eleven ACIP operations are being continued for the originally stated purposes.

U. S. ARMY INTELLIGENCE COMMAND
FORT HOLABIRD, MARYLAND 21219

11 APR 1973

ICDO-OP

SUBJECT: Quarterly Reporting of Aggressive Counterintelligence Program (ACIP) Operations (U)

HQDA (DAMI-DOI-S)
WASH DC 20310

1. (U) References:

a. Letter, DAMI-DOI-S, 8 Mar 72, subject as above.

b. Letter, ICDISO-OC, 11 Oct 72, subject as above.

c. Letter, ICDISO-OC, 15 Jan 73, subject as above.

d. Letter, DAMI-DOI-P, 26 Feb 73, subject: Counterintelligence Support for Security of Nuclear Weapons, with 1st Indorsement, ICDO, 12 Mar 73.

2. (U) In compliance with reference a, above, the ACIP quarterly report for the period 1 January - 31 March 1973 is forwarded herewith.

3. (U) Operational and administrative control measures outlined in reference b, above, remained in effect during the reporting period. There were no instances of acquisition of information on non-DoD affiliated personnel.

4. (U) ~~(C)~~ Utilization of the ACIP to enhance the security of chemical and nuclear weapons, as set forth in reference c, above, has been integrated into the overall counterintelligence support to the US Army Materiel Command (AMC) and HQ, US Army Air Defense Command. Action taken on this program will be reported as outlined in reference d, above. In the future, this quarterly report will pertain only to operations in progress and those in the planning stage.

ICDO-OP 11 APR 1973
SUBJECT: Quarterly Reporting of Aggressive Counterintelligence Program (ACIP) Operations (U)

5. (U) ~~(C)~~ In the area of chemical and nuclear weapons, the Commander of Seneca Army Depot has formally requested an ACIP operation. The Commander, Savanna Army Depot, has requested an ACIP briefing. Additional assessment of the Sierra Army Depot will be necessary to determine the applicability of the ACIP. Requests for the program have been received from Harry Diamond Laboratories, US Army Mobility Equipment and Development Center, and Deseret Test Center, all subordinate to AMC. The Commander, US Army Management Systems Support Agency, an automatic data processing facility in the Pentagon supporting the Office of the Vice Chief of Staff, has also submitted a formal request for the program. The assessments necessary to justify the program in each case have been accomplished or are underway, and individual Operations Plans are expected in the near future.

6. (U) ~~(C)~~ In an effort to replace the expertise and continuity which have been lost through the reduction of civilian Excepted Service Position spaces in the MI Groups, an effort is underway to obtain Great Skills personnel for inclusion in the program.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Quarterly ACIP Report

OFFICE SYMBOL: DAMI-DOI-S

SUSPENSE:

DATE: 2 February 1973

ACTION REQUIRED: To forward memorandum requesting VCSA sign memorandum to USA.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. BACKGROUND:

a. By Memorandum dated 8 February 1972, the Under Secretary of the Army requested the Vice Chief of Staff, US Army provide quarterly reports on all ACIP's (BLUE TAB B).

b. The third quarterly report for 1972 was submitted to the Under Secretary of the Army on 20 October 1972 (BLUE TAB C).

c. Written input from USAINTC for the current quarterly report is attached at BLUE TAB D.

2. DISCUSSION:

a. Word received from the SGS on 1 February 73 revealed the new VCSA desires to personally sign all memoranda to the Under Secretary of the Army. How long this new policy is to be effective is currently unknown.

b. Based on DA memoranda 340-15 and 340-17, the ACSI had signed a previous memorandum on this action for the VCSA (BLUE TAB E). This action was returned by SGS on 1 Feb 73 for compliance with new policy.

c. The memorandum at BLUE TAB A forwards a memorandum to the VCSA requesting he sign and forward to the USA the fourth quarterly ACIP report for 1972.

3. RECOMMENDATION: That the memorandum to the VCSA at BLUE TAB A be approved and signed.

Information Obtained:

a. During the fourth quarter 1972, useful information was obtained from seven of the eleven Aggressive Counterintelligence Programs. The operations at Ft. Ritchie, Maryland, the Electronics Command, the Army War College, Ft. Monmouth, New Jersey and Picatinny Arsenal, each identified one or more potential personnel or physical security problems which were reported to the respective serviced commanders. The program at Ft. Ord, California, continued to identify military personnel affiliated with the Vietnam Veterans Against the War (VVAW) and also military personnel associated with the proposed making of an anti-war film on the Ft. Ord reservation. This information was passed to representatives of the supported commander. A characterization of the VVAW is attached. The operation at the Presidio of California developed information on what appears to be a program of fraudulent immigration from a Communist Country. Additionally, classroom statements by an Army student identified his father as a Soviet-born key employee of another US intelligence agency. In each case, the supported commander was informed and a summary of information report was forwarded to the appropriate federal agency.

b. The other four operations reported no information, during the fourth quarter, which would indicate the existence of a hostile intelligence threat or possible security hazard. Inasmuch as these operations are a form of intensified security watchfulness, negative reports in themselves are frequently of value to a commander in planning for the security requirements of a given installation or activity. The placement and access of current sources, and those under consideration, are such that the chances of detecting a developing security threat situation in a sensitive installation or unit are greater with these sources operating.

Continuance of Operations:

The eleven ACIP operations are being continued for the original stated purposes.

VIETNAM VETERANS AGAINST THE WAR

(U)

1. (C) General: The Vietnam Veterans Against the War, Incorporated (VVAW) was founded in the spring of 1967 in New York City. The objectives of the VVAW include: the demand for an immediate cessation of fighting and withdrawal of American troops from Vietnam; and to support all military personnel refusing to serve in wars of aggression at home or abroad. The VVAW reportedly has chapters in all 50 states and Vietnam. The national office is located at 25 West 26 Street, New York, New York. VVAW policy is established by its National Steering Committee composed of 26 regional coordinators. The local chapters often act independently of the national office. (There have been indications that some local chapters of the VVAW have been taken over by youth groups of Marxist-Leninist organizations.) This is in keeping with the recent resignation of four of the five members of the Executive Committee of the National Steering Committee. During a November 1971 meeting of the Steering Committee, statements were made that conservative VVAW members would be replaced by more militant members who would take action rather than talk. Many of the VVAW officials and members are presently or have in the past been affiliated with organizations identified as being threats to Army morale and discipline, such as CPUSA, Socialist Workers Party, Progressive Labor Party, and People's Coalition for Peace and Justice. Total VVAW membership is reportedly approaching 10,000. Financial support appears to come from private donations.

(U)

2. (C) Relationship to the Army: The VVAW, reportedly, has counseled US Army deserters to go to Sweden rather than return to the US from Canada; and has provided deserters with funds and false draft registration cards. The organization has attempted to recruit active duty soldiers to the ranks of the VVAW and has urged inductees to "resist the Army and join the VVAW." VVAW local chapters have allied themselves with antimilitary dissident soldier organizations in an attempt to undermine morale and discipline of service personnel.

3. (U) Foregoing information falls under provisions of para 4a(1) and 4a(2), DA letter, AGDA-A(M)(1 Jun 71) CS, subject: Acquisition of Information Concerning Persons and Organizations Not Affiliated with the Department of Defense.

FORT HOLABIRD, MARYLAND 21219

15 JAN 1973

ICDISO-OC

SUBJECT: Quarterly Reporting of Aggressive Counterintelligence Program (ACIP) Operations (U)

HQDA (DAMI-DOI-S)
WASH DC 20310

1. (U) References:

a. Letter, DAMI-DOI-S, 8 Mar 72, subject as above.

b. Letter, ICDISO-OC, 18 Apr 72, subject as above.

c. Letter, ICDISO-OC, 11 Oct 72, subject as above.

2. (U) In compliance with reference a, above, the ACIP quarterly report for the period 1 October - 31 December 1972 is forwarded herewith.

3. (U) Operational and administrative control measures outlined in reference c, above, remained in effect during the reporting period. There were no instances of acquisition of information on non-DoD affiliated personnel.

4. (C) Based on the immediate concern for the security of chemical and nuclear weapons, this Command is preparing plans in conjunction with US Army Materiel Command and HQ, US Army Air Defense Command to provide counter-intelligence support to these units and their sub-elements. In view of recent terrorist group actions, it is apparent that such groups will go to any extreme to achieve their ends. As some terrorist representatives have pointed out, they feel that such actions must have increasing world shock value in order to further their cause. The capture or explosive destruction of a nuclear weapon either in storage or in transit would be just such an act. Indications of intention may be developed through the ACIP. Planning for this kind of support in conjunction with other means available to USAINTC is being effected. It is expected that by the end of the next reporting quarter, more definitive information concerning initiation of ACIP in support of these two Commands will be established.

ICDISO-OC
SUBJECT: Quarterly Reporting of Aggressive Counterintelligence Program (ACIP) Operations (U)

5. (C) With a view towards the probable requirement of expanding ACIP operational capability by USAINTC field elements, this Command has initiated a training program designed to improve the professionalism of personnel in the operational techniques and reporting in such operations. This training program should qualify additional personnel to participate in current and potential future operations.

FOR THE COMMANDER:

RAY W. CHAMBERS
LTC, MI
Acting Assistant Adjutant General

1. CANAL LOOP: (OACSI Approval - 16 Feb 72)

a. Location: Edgewood Arsenal, Edgewood, MD

b. Confidential Source Utilization: Five sources were utilized during the reporting period.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: No information to indicate the existence of a hostile threat to the installation or a possible security hazard was developed during the reporting period.

e. Operational Status: During the reporting period, experienced personnel were assigned in both liaison and source handling capacity, and the operational capabilities can be expected to improve. The Commanding Officer of Edgewood Arsenal has again expressed his desire for continuation of ACIP operations within his installation.

2. CANARY EFFORT: (OACSI Approval - 16 Feb 72)

a. Location: Fort Ritchie, MD

b. Confidential Source Utilization: Three sources were utilized during the reporting period.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: Information reflecting on the character and suitability of certain employees in the target areas was obtained.

e. Operational Status: During the period, both Case Officer and Liaison Officer were assigned to DIS. The transfer of the former diminished source contact appreciably. With the assignment of a case officer, information obtained during the period will be developed to its fullest extent. An experienced liaison officer is being assigned to this ACIP and will begin spotting and assessing potential sources to meet the desire of the Commanding Officer to achieve the greatest operational potential.

3. CANCER PORCH: ([redacted]SI Approval - 28 Dec 71)

a. Location: Defense Language Institute Southwest Branch, Fort Bliss, TX

b. Confidential Source Utilization: One such source was recruited during the reporting period.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: No information to indicate the existence of a hostile threat to the installation or a possible security hazard was developed during the reporting period.

e. Operational Status: As indicated in previous reports, this facility is expected to cease operations on 30 June 1973. The prime reason for developing this single confidential source is his expected transfer at that time to another branch of the Institute.

11. LENTIL MONKEY: (OACSI Approval - 26 Oct 71)

a. Location: Defense Language Institute West Coast Branch, Presidio of Monterey, CA

b. Confidential Source Utilization: Contact was maintained with four sources during the reporting period. This represents an increase of one source.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: Information was developed on what allegedly is a program of fradulent immigration from a Communist country. Additionally, classroom statements by an Army student identified his father as a Soviet-born key employee of another intelligence agency. In each case, A Summary of Information was prepared for transmission to the appropriate agency.

e. Operational Status: There is currently a source in each of four sensitive language departments. Sources have been alert for classroom discussion which would identify personnel who are in communication with relatives in countries considered hostile to the US. Additional sources are to be developed in the larger departments, which will allow more adequate monitoring for possible indicators of hostile intelligence influence.

MEMORANDUM THRU: VICE CHIEF OF STAFF, UNITED STATES ARMY

MEMORANDUM FOR: UNDER SECRETARY OF THE ARMY

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

1. (U) This is in response to your Memorandum on 17 January 1975 to the Vice Chief of Staff in regard to subject and serves as the Quarterly ICIP Report for the 2d Quarter, FY 2975.

2. (U) On 2 October 1974, I directed a review of the entire ICIP program with a view towards the elimination of those no longer considered of sufficient merit to warrant retention. The criteria used in evaluating each ICIP operation was: (a) The sensitivity of the installation/activity is such that some type of special counterintelligence support is required or (b) There is a known threat of sufficient magnitude to the installation/activity to warrant a need for some type of special counterintelligence support and (c) The information desired cannot be obtained except through the use of confidential sources.

3. (U) Based on this review and considering your 17 January guidance, I directed the termination of 12 ICIP operations at the following headquarters:

a. Hq, US Army Communications Command, Fort Huachuca, Arizona (CANAL ROPE).

b. Dugway Proving Ground, Utah (CANARY STONE).

c. US Army Air Defense Center, Fort Bliss, Texas (CANTINA ARCH).

d. Umatilla Army Depot Activity, Hermiston, Oregon (CANYON ROSTER).

e. US Army Mobility Equipment Research and Development Center, Fort Belvoir, Virginia (CENTAUR SALE).

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOI-C

SUSPENSE:

DATE: 31 January 1975

ACTION REQUIRED: To respond to tasking from the USofA pertaining to ICIP.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. BACKGROUND:

a. At the direction of the USofA quarterly reporting of ICIP has been furnished to him through the VCSA since February 1972. In a memorandum to the VCSA (RED TAB B), the VSofA suggests that in more than half of the ongoing operations, no useful information was developed. He directed a detailed review of the benefits derived through the program over the last two years.

b. On 29 January 1975, the ACSI directed the termination of 12 of the 19 ongoing operations. They will be terminated on a time phase basis with all 12 being terminated by 31 March 1975.

2. DISCUSSION: At RED TAB A is a memo through the VCSA to the USofA replying to the comments of USofA and providing the requested information pertaining to the program.

3. RECOMMENDATION: That the memo at RED TAB A be approved and signed.

MEMORANDUM FOR: MG AARON, ASSISTANT CHIEF OF STAFF FOR INTELLIGENCE, DA

SUBJECT: Status of Internal Counterintelligence Program (ICIP) Operations

1. (U) References:

a. ACSI Memo, 7 Jan 75, subject: ICIP.

b. Under Secretary of the Army Memorandum, 17 Jan 75, subject: ICIP.

c. Letter, DAMI-DOI-S, 8 Mar 72, subject: Quarterly Reporting of ICIP Operations (U).

2. (U) In compliance with your oral instructions of 2 October 1974; your Memorandum of 7 January 1975; and guidance contained in the Memorandum of 17 January 1975 from the Under Secretary of the Army, we have completed a comprehensive review of the current active 19 ICIP operations.

3. (C) Our review was basically governed by the following factors: (1) The sensitivity of the installation/activity is such that some type of special counterintelligence support is required or (2) there is a known threat of sufficient magnitude to the installation/activity to warrant some type of special counterintelligence support and (3) the information desired cannot be obtained except through the use of Confidential Sources.

4. (C) Using the above criteria and your decision of 29 January, 12 of the 19 on-going operations are to be terminated. We believe that we can provide adequate support to the installations/activities concerned through a program of intensified liaison by the appropriate local USAINTA representative. The operations to be terminated are listed in an attached proposed Memorandum to the Under Secretary of the Army. These operations should be terminated on a time phased basis with all 12 to be terminated no later than 31 March 1975.

(U) ~~(C)~~ CANARY EFFORT:

a. Location: Fort Ritchie, MD

b. Confidential Source Utilization: Three confidential sources are currently being utilized.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Sensitive Character of the Mission that Necessitates an ICIP Operation: The mission of the elements within Fort Ritchie, which include the Telecommunications Directorate (TD), Alternate Joint Communications Center (AJCC), Site R, and Divisions organic to TD is critical sensitive. The Telecommunications Directorate provides the operation, maintenance, engineering, and installation of communication-electronic activities, facilities, systems, and networks comprising the AJCC serving the Alternate National Military Command Center (ANMCC) and other agencies as directed. This activity also provides direction and supervision to the operations division, the maintenance division and the communications services divisions which are included in the target list for the project. Because of the nature of the target areas and of the work force, a confidential source program is essential to provide adequate CI coverage to the project.

e. Benefits and Information Obtained Over the Last Two Years: Although the operation was initiated in 1958, the program was terminated in 1971 and was not revalidated until February 1972. Sources within the target area report information concerning both US Army personnel and Department of the Army civilian personnel assigned to Fort Ritchie and AJCC. The following are examples of information obtained:

(1) Suitability information concerning an Army NCO, specifically, indebtedness. The NCO was responsible for the issuance of passes, both temporary and permanent, to the AJCC. The surfacing of the indebtedness resulted in the reassignment of the individual to a less sensitive billet and further investigation was requested.

(2) A report personality change manifested by alcohol abuse concerning an Army NCO assigned to sensitive duties at the TD, AJCC, resulted in the monitoring of the NCO's activities to determine if an investigation is warranted.

(3) Suitability information, specifically, alleged drug abuse and irrational behavior, was provided on a DAC employed within the Office of the Comptroller. The report resulted in a request for a Suitability Investigation to be conducted by USAINTA.

(4) Adverse suitablity information, specifically, financial problems and irrational behavior was developed pertaining to an Army NCO assigned sensitive duties within the Record Communication Branch, TD. This resulted in a request for a Suitablity Investigation from USAINTA.

CONFIDENTIAL

~~CONFIDENTIAL~~

CANARY EFFORT:

(5) Adverse suitability information, specifically, promiscuity with officers and enlisted personnel at Fort Ritchie, pertaining to a female DAC employee of the ADP Service Division resulted in the monitoring of her activities by local authorities.

(6) Adverse suitability information, specifically, an abnormal interest in firearms, explosives and poisions, coupled with irrational behavior, was surfaced concerning an enlisted man assigned to the USACEEIA-CONUS, Automated Support Group. The result was the suspension of the individual's access to classified defense information pending a psychiatric evaluation of the individual.

(7) During the period 1 January 1974 through 31 December 1974 a total of 94 Agent Reports were submitted concerning 44 individuals assigned to Fort Ritchie occupying either sensitive positions and/or having security clearances. The Agent Reports forwarded adverse suitability information. It is estimated that approximately 50% of the useful information obtained through this operation would not have been available on a timely basis without the use of confidential sources.

f. Based on the above, and the fact that the type of activities conducted at Fort Ritchie are known to be of interest to hostile intelligence services, this operation has been selected for retention at this time.

~~CONFIDENTIAL~~

Page 1665 of 3957

~~CONFIDENTIAL~~

(U)~~(C)~~ CANINE PLATE:

a. Location: Seneca Army Depot, Romulus, NY

b. Confidential Source Utilization: None.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Sensitive Character of the Mission that Necessitates an ICIP Operation: The mission of the Seneca Army Depot (SAD) is the operation of a supply depot for the receipt, storage, issue, maintenance, and disposal of missile and artillery weapons systems with a nuclear capability. Included in the items handled are ammunition, propellants, explosive components of guided missiles, special weapons materials, supplies, industrial production equipment (to include special tools), petroleum and chemical supplies, fire control test and measuring equipment, and other special weapons with a nuclear capability. SAD is also responsible for systems modification for AEC/DOD test firings. The Directorate for Special Weapons, which includes the Production Planning and Control Division, Supply Division, and Maintenance Division includes the most sensitive and critical areas of Seneca Army Depot, and is the Priority I target for the operation. Because of the sensitivity and criticality of the activities at this installation, a confidential source program is essential to provide adequate CI coverage to the depot and its activities.

e. Benefits and Information Obtained: This operation was administratively implemented in November 1973, but has not yet become operationally effective. The successful development of a viable source program has been hampered by personnel turbulence within the Army's Intelligence Agency, the remoteness of the target area, and the composition of the work force. The lack of significant information is viewed as a direct result of the absence of a firmly established confidential source program and reinforces the need to employ all possible means to deter and detect the efforts of hostile intelligence services to penetrate the activity or approach some of its key personnel. It is a known fact that hostile intelligence services have high priority collection objectives directed against activities such as those conducted at Seneca Army Depot. This is a matter of grave concern to the security of the Army, which is reinforced by the growing threat of nuclear theft and blackmail from terrorist groups.

f. Based on the above, it is considered absolutely necessary to maintain a counterintelligence "early warning" device such as the ICIP as an adjunct to the normal internal security program; therefore, this operation has been selected for retention at this time.

(U) CANVAS TAX:

a. Location: Sierra Army Depot (SAD), Herlong, CA

b. Confidential Source Utilization: None

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Sensitive Character of the Mission that Necessitates an ICIP Operation: The mission of the Sierra Army Depot (SAD) is the operation of a supply depot for the receipt, storage, issue, maintenance, and disposal of missile and artillery weapons with a nuclear capability. Included in the items handled are ammunition, propellants, explosive components of guided missiles, special weapons materials, supplies, industrial production equipment, petroleum and chemical supplies, fire control test and measuring equipment, and other special weapons with a nuclear capability. SAD is also responsible for maintaining a capability for systems modification in support of the joint AEC/DOD test firing programs. Priority I targets are Exclusion Area One, Exclusion Area Two, and the Maintenance Area for Special Weapons. Because of the nature of the activities, the isolated location of the target areas and the composition of the work force, a confidential source program is essential to provide adequate CI coverage to the depot and its activities.

e. Benefits and Information Obtained: This operation was administratively implemented in April 1974, but has not yet become operationally effective. In the nine months of its existence, the successful development of a viable source program has been hampered by personnel turbulence within the Army's Intelligence Agency. Although the operation has surfaced no significant information to date, this is considered directly attributable to the lack of a firmly established confidential source program and does not rule out the need to employ all available means designed to deter and detect the efforts of hostile intelligence services to penetrate the activity or approach some of its key personnel. It is a known fact that hostile intelligence services have high priority collection objectives pertaining to activities such as those conducted at Sierra Army Depot. When this matter of grave concern to the security of the Army is coupled with the growing threat of nuclear theft and blackmail from terrorist groups, it is considered absolutely necessary to maintain a counterintelligence "early warning" device such as the ICIP as an adjunct to the normal internal security program.

f. Based on the above, this operation has been selected for retention at this time.

CONFIDENTIAL

~~CONFIDENTIAL~~

(U) CENSUS TIME:

a. Location: Pentagon Telecommunications Center (PTC), US Army Communications Command (USACC), The Pentagon, Washington, DC

b. Confidential Source Utilization: One source was used during the reporting period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Sensitive Character of the Mission that Necessitates an ICIP Operation: The mission of the elements of the Pentagon Telecommunication Center, which include the Operations Division, the Army Operations Center Division, Facilities Division, Supply Division, and Administrative Division is critical sensitive. The Operations Division provides electrical record communications cryptographic services for Department of the Army and communications support to the Department of Defense, Joint Chiefs of Staff, National Military Command Center, Department of State, White House, other government agencies in the Washington area, embassies of allied nations and NATO. Additionally, the Pentagon Telecommunications Center operates the Forrestal Building Telecommunications Center, the Hoffman Building Telecommunications Center, and telephone and teletype service, including secure means, in the Army Operations Center. Because of the nature of the target areas and the work force, a confidential source program is essential to provide adequate CI coverage to the project.

e. Benefits and Information Obtained: Although the operation was administratively activated in February 1974, it did not become operational until October 1974. The one source used in the operation is a recent recruitment and project control personnel have devoted their time to training and developing the source. This operation has produced no significant counterintelligence threat information to date because of the factors indicated. Based upon information available through other sources, it is known that the hostile intelligence services are extremely interested in computerized communications systems and on the type of communications and activities conducted by PTC. The lack of positive information acquired to date does not rule out the threat of hostile intelligence service efforts to penetrate the activity, and is viewed as an indication that confidential source program is essential to provide adequate CI coverage to the activity.

f. Based on the above, this operation has been selected for retention at this time.

(U) CENTAVO KID:

a. Location: Harry Diamond Laboratories (HDL), Washington, DC.

b. Confidential Source Utilization: Seven confidential sources are currently being utilized.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Sensitive Character of the Mission that Necessitates an ICIP Operation: The mission of the HDL includes critical sensitive research and development activities accomplished in support of the US Army. The most sensitive elements are the Branch Laboratory 240 which conducts research into the hardening of communications equipment against nuclear weapons radiation; Branch Laboratory 290 which conducts tests of nuclear warhead and missile systems to determine their ability to withstand nuclear weapons radiation; Branch Laboratory 510 and 640 which conduct joint research to develop countermeasures against various foreign weapons systems; Branch Laboratory 750 which manages the development and production of all fuzes produced by HDL; Branch Laboratories 610 and 620 which develop fuzes for use with nuclear warheads and Branch Laboratory 1000 which conducts development and testing of radiation hardened systems for Minutemen and Poseidon Missiles. Because of the sensitive research and development mission of HDL, and the dispersed location of the activities, a confidential source program is essential to provide adequate CI coverage to the activity.

e. Benefits and Information Obtained over the Last Two Years: Although the operation was administratively initiated in March 1973, it did not become operational until October 1974. The sources within the target area provide coverage on five of the above listed six target areas. The following examples illustrate the type of information obtained:

(1) The identification of a "loosetalk" problem at HDL's Woodbridge facility.

(2) Adverse suitability information, specifically, extra marital affairs and other related marital problems, coupled with an assault incident was surfaced which contributed to an on-going security investigation concerning a DAC at HDL.

(3) A security weakness was identified at the Woodbridge facility as various persons were entering the facility to hunt deer without any clearances or security checks of any kind.

(4) It is estimated that approximately 60% of the useful information obtained through this operation during the past three months would not have been available on a timely basis without the use of confidential sources.

(U)(C) LENS HOLDER:

a. Location: White Sands Missile Range (WSMR), NM

b. Confidential Source Utilization: None.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Sensitive Character of the Mission that Necessitates an ICIP Operation: The mission of the White Sands Missile Range (WSMR) is to evaluate the Safeguard Missile System, missile vulnerability studies, and missile control systems, and perform pre-production tests and analyses of missile systems. Priority I targets of elements located at WSMR are the Missile Electronic Warfare Technical Area, National Range Operations Directorate, US Army Missile Test and Evaluation Directorate, and the US Army Safeguard Systems Evaluation Agency. These elements develop electronic countermeasure techniques to nullify vulnerabilities discovered in missile systems, conduct pre-production tests of rocket and guided missile systems, operate a nuclear effects facility, and operate National Range facilities for tests conducted at WSMR.

e. Benefits and Information Obtained: This operation was initiated administratively in August 1974. Not yet operational, this ICIP has no source assets and has produced no significant counterintelligence information to date. However, the nature of the activities and the work force at WSMR make it necessary that a confidential source program be developed to provide adequate CI coverage. The remoteness of the installation and the knowledge that the type of activities conducted there are current targets of hostile intelligence services make it necessary to provide the type of "early warning" protection offered by the ICIP.

f. Based on the above, this operation has been selected for retention at this time.

SECRET

(S) LENTIL MONKEY:

a. (U) Location: Defense Language Institute (DLI), Presidio of Monterey, CA

b. (C) Confidential Source Utilization: Four confidential sources were utilized during the period.

c. (U) Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. (U) Sensitive Character of the Mission that Necessitates an ICIP Operation: The mission of DLI is to train DOD intelligence and communications security specialists in every major foreign language. Military attaches and employees of CIA, FBI, and other federal agencies are also trained at DLI, making it an extremely enticing target for hostile intelligence service operatives. The majority of the faculty of DLI have foreign backgrounds and many possibly have had contact with foreign intelligence agencies in their native countries. Many of the instructors who are subject to hostage factors, and may or may not have had previous contact with a hostile intelligence service, frequently travel to their native countries in Eastern Europe. Because of the unique nature of this activity and the sensitivity of the intelligence personnel who are students there, a confidential source program is essential to provide adequate CI coverage to the project.

e. (S) Benefits and Information Obtained over the Last Two Years: Although initiated in 1968, the operation was dormant for most of 1971. Revalidated in October 1971, this operation and the sources employed have produced voluminous information and leads indicative of hostile intelligence modus operandi aimed at contact with students or faculty. The following are examples of information obtained:

(1) b1

(2) Another indicator is the frequent attempt made by foreign-born instructors to induce "pen-pal" contact between DLI students and persons living in Soviet-bloc countries. This is a known spotting technique of hostile intelligence services.

(3) Numerous reports have been surfaced of adverse suitability information involving drug abuse or immoral conduct on the part of students which have triggered investigations to determine their suitability for sensitive assignments.

SECRET

Page 1672 of 3957

~~SECRET~~

(U)

~~(S)~~ LENTIL MONKEY

(4) An incident in which two Soviet citizens visited DLI and moved about unescorted caused new visitor control regulations to be published and put into effect.

(5) Students from DLI on field trips sponsored by the Arabic Language Department were exposed to anti-US propaganda at the Arabic Trade Mission in San Francisco.

(6) Sources reported several instances on questionable activities and curricula in the Arabic Language Department which involved the use of politically contentious materials in classroom drills.

(7) An ICIP source reported information which alerted another agency to a possible breach in the security of its intelligence operations and possibly helped avoid some embarrassment in relations with the Middle East.

(8) It is estimated that approximately 70% of the useful information obtained in this operation would not have been available on a timely basis without the use of confidential sources.

f. (U) Based on the above, and due to the unique mission of DLI, this operation has been selected for retention at this time.

(W)(C) CANAL ROPE: (OACSI Approval - 17 Dec 73)

a. Location: Headquarters, US Army Communications Command (USACC), and 11th Signal Group, Fort Huachuca, AZ.

b. Confidential Source Utilization: None.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: Initial assessment information on two prospective sources.

e. Operational Status: The two sources previously recruited in this operation were terminated during the last reporting period. Although two prospective sources have been spotted, they are still undergoing assessment and have not been recruited. One prospective source is in the 11th Signal Group and the other is in the Headquarters, USACC. Information was reported on an NCO assigned to the Communications Electronics Engineering Installation Agency (CEEIA), USACC, alleging possible foreign business interests. USACC has initiated a limited investigation on the NCO to clarify the allegation. On 17 Dec 74 the PLO presented the Quarterly Briefing to CPT Richard Milligan, Assistant Director of Security, USACC, who indicated that the supported commands were satisfied with the progress of the ICIP.

f. Recommendation: The installation and activities are such in this case that we feel we can provide the support necessary without the use of confidential sources. Based upon the above, recommend the ICIP be terminated.

(U) CANARY STONE: (OACSI Approval - 18 Jul 73)

a. Location: Dugway Proving Ground, (DPG), UT

b. Confidential Source Utilization: Two confidential sources were utilized during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: Assessment information obtained on two potential confidential sources.

e. Operational Status: On 21 November 1974, COL Adalbert E. Toepel Jr., Commander, DPG, was presented the Quarterly Briefing by the PLO. MAJ Trevor E. Bissey, Commander, San Francisco Field Office, 525th MI Group, and Mr. Clinton E. Bair, Intelligence Officer, DPG, also attended the briefing. No immediate threat to DPG was surfaced during the reporting period. A possible item of long term interest was reported involving foreign correspondence and/or contacts by DPG scientific personnel. COL Toepel expressed satisfaction at the progress of CANARY STONE and was appreciative of MI support rendered to DPG, particularly the conduct of security guard training preparatory to a AMC inspection in January 1975. Source spotting, recruitment, and assessment has been hampered by an impending reduction of civilian employees and a proposed reorganization of DPG directorates which will likely result in shifts of personnel. A reduction in force is scheduled for January 1975 and approximately 160 civilian employees, primarily research and scientific staff, will be discharged or reassigned to other duties.

f. Recommendation: The installation and activities are such in this case that we feel we can provide the support necessary without the use of confidential sources. Based upon the above, recommend the ICIP be terminated.

(U) CANTINA ARCH: (OACSI Approval - 12 Dec 74)

a. Location: US Army Air Defense Center, Fort Bliss (USAADCENFB), Ft Bliss, TX

b. Confidential Source Utilization: Four confidential sources were utilized during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: Suitability information was reported on one DAC employee of the Directorate of Combat Developments who reportedly has a drinking problem. The unidentified individual reported previously as selling used clothing in Mexico and suspected of bribing Mexican border officials has been tentatively identified as an NCO assigned to the Air Defense School. A limited investigation is to be conducted on the NCO to determine the legality and extent of his activities.

e. Operational Status: One of the four confidential sources used in the operation was terminated when he was reassigned from Fort Bliss. The PCO for the operation retired at the end of November 1974. Recruitment of additional sources has been hampered somewhat by personnel turbulence at the installation, but this situation is expected to stabilize in early 1975. On 16 December 1974, LTC Robert Davenport, Director of Security, USAADCENFT, Ft Bliss, was given the Quarterly Briefing on CANTINA ARCH. LTC Davenport stated that he was pleased with the progress of the ICIP and stated that he was requesting limited investigations on Ft Bliss personnel on whom information had been recently surfaced.

f. Recommendation: The installation and activities are such in this case that we feel we can provide the support necessary without the use of confidential sources. Based upon the above, recommend the ICIP be terminated.

CANYON ROSTER: (OACSI Approval - 8 Mar 74)

a. Location: Umatilla Army Depot Activity (UMDA), Hermiston, Oregon

b. Confidential Source Utilization: Two confidential sources were utilized during this period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: Some investigative data was obtained on prospective sources.

e. Operational Status: One confidential source was terminated during the period and two confidential sources were recruited during the period. Firm liaison and operational rapport has been established with federal and local law enforcement agencies in the area. Five prospective sources are presently under initial assessment. Of the five, three are in the guard force of the Security Branch. On 23 December 1974, the PLO presented the Quarterly Progress Briefing to LTC Daniel W. Doty, Commander, Umatilla Depot Activity. The briefing consisted of a review of MI activities, performed in support of the installation's security program and the status of the ICIP. LTC Doty indicated that he was generally well satisfied with the program and the support rendered.

f. Recommendation: The installation and activities are such in this case that we feel we can provide the support necessary without the use of confidential sources. Based upon the above, recommend the ICIP be terminated.

(U) ~~(a)~~ CENTAUR SALE: (OACSI Approval - 14 Dec 73)

a. Location: US Army Mobility Equipment Research and Development Center (USAMERDC), Fort Belvoir, VA

b. Confidential Source Utilization: None.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: Travel plans were learned for one USAMERDC civilian employee who will travel to the USSR in the Spring of 1975. A reported SAEDA attempt involving an officer of the Camouflage Division, USAMERDC in Oct 74 has led to an internal security measure in which the PLO will give informal SAEDA lectures to management personnel of USAMERDC in an effort to improve the security posture. The PLO will in the future accompany USAMERDC security inspection teams as they make weekly inspections of USAMERDC activities. This will not only increase the visibility of the PLO at USAMERDC, but will alsc enable the PLO to spot and assess additional personnel in the more sensitive areas of USAMERDC for possible use in the ICIP.

e. Operational Status: The series of informal SAEDA lectures and the accompanyment of the security inspection teams described above have been coordinated with the supported command and the security officer to start in January 1975. On 10 December 1974, the PLO presented the Quarterly Progress Briefing to Mr. Leslie L. Askew, USAMERDC Security Officer. From the period 5 September through 5 November 1974, the PLO was on special duty with the OACSI, DA, and was unable to participate actively in the ICIP.

f. Recommendation: Based upon results achieved to date we feel we can continue to provide the support necessary without the use of confidential sources. Based on the above, recommend the ICIP be terminated.

(U) CENTRAL TAXI: (OACSI Approval - 16 Feb 72)

a. Location: Headquarters, US Army Electronics Command (ECOM), Fort Monmouth, New Jersey

b. Confidential Source Utilization: Five confidential sources were utilized during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: On 23 October 1974, a bomb threat was received which caused evacuation of the new ECOM office building. During the evacuation some classified material was left unsecured and unattended. The ECOM Security Office is insuring that classified material is secured during future evacuations and that fire marshals and bomb squads remain on all floors during an evacuation. A source also reported that an unsecured fire exit door in the east wing of the new ECOM office building allowed free access to a fire tower and all floors above. The Security Officer was notified who in turn notified the Provost Marshal's Office (PMO) who will insure that the door is secured in the future. A discharged enlisted man used his expired building pass to enter the Hexagon Building, Ft Monmouth, in early Dec 74. The information was passed to the Security Office who coordinated with the PMO to correct such deficiencies during the out-processing of reassigned/separated personnel. A source reported an increase in use of narcotics among military personnel employed at ECOM. The information was provided to CID which assumed investigative responsibility. An ECOM civilian employee received a telephonic threat against his life during the week of 24 Oct 74. The PLO provided the information to the local CID which initiated an investigation.

e. Operational Status: Thirteen conventional sources are used to provide coverage of the ECOM target areas in addition to the five confidential sources used. Efforts are being made to recruit two additional sources in the Directorate of Management Information Systems (DMIS), ECOM. On 9 January 1975, the PLO presented the Quarterly Progress Briefing to COL John Sanderson, Security Officer, ECOM. MAJ Nicholas F. Quintarelli, Commander, Fort Monmouth Field Office, 902d MI Group, also attended the briefing. COL Sanderson indicated at the briefing that the command was extremely well pleased with the support being provided by this ICIP.

f. Recommendation: The installation and activities are such in this case that we feel we can provide the support necessary without the use of confidential sources. Based upon the above, recommend the ICIP be terminated.

(U) CENTURY SQUAD: (OACSI Approval - 3 Oct 73)

a. Location: US Army Management Systems Support Agency (USAMSSA), The Pentagon, Washington, DC

b. Confidential Source Utilization: One confidential source was used during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: None.

e. Operational Status: Only one confidential source has been recruited for this ICIP. The source has been assigned for much of the time to the 2300-0700 hour shift when there has been only a small number of other persons present. Thus the situation has not been conducive to a volume of reporting. The source will be terminated early in 1975 when he transfers to a new assignment. The PLO and PCO presently are making a re-evaluation of this ICIP which will lead to a recommendation for continuation or termination. On 18 December 1974, the PLO presented a Quarterly Progress Briefing to Mr. John R. Bjork, Security Manager, USAMSSA.

f. Recommendation: The installation and activities are such in this case that we feel we can provide the support necessary without the use of confidential sources. Based upon the above, recommend the ICIP be terminated.

(U) GONDOLA STAR: (OACSI Approval - 17 Feb 72) (Revalidated 30 Oct 74)

a. Location: Aberdeen Proving Ground (APG), MD

b. Confidential Source Utilization: Seven confidential sources were used during the reporting period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: A source reported allegations that a civilian employee of Edgewood Arsenal was possibly engaged in an illicit affair with another Edgewood employee. The Commander was briefed.

e. Operational Status: One confidential source was terminated on 9 Oct 74. During the reporting period, limited progress was made in increasing ICIP support to the serviced activities. The PLO's duties not directly related to the ICIP limited the acquisition of ICIP sources needed to increase the ICIP coverage to the desired level. However, two prospective sources are under assessment and their recruitment is planned for the next quarter. On 18 December 1974, the Quarterly Progress Briefing was given to COL Alvin D. Ungerleider, Commander, APG, and Mr. Harry A. Mencke, Installation Intelligence Officer, APG. On 19 December 1974, the Quarterly Progress Briefing was presented by the PLO to COL Kenneth L. Stahl, Commander, Edgewood Arsenal, APG, and MAJ Walter W. Stansberry, Chief of Security, Edgewood Arsenal.

f. Recommendation: The installation and activities are such in this case that we feel we can provide the support necessary without the use of confidential sources. Based upon the above, recommend the ICIP be terminated.

a. Location: Picatinny Arsenal (PA), Armament Command, US Army Materiel Command, Dover, NJ

b. Confidential Source Utilization: Three confidential sources were utilized during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: A civilian employee identified earlier as being a possible security risk due to a reported episode of erratic and irrational behavior was removed from the employee rolls at Picatinny after an October 1974 report by a source that he behaved irrationally during a visit to the Installation's US Army Health Clinic.

e. Operational Status: The PCO assigned to this ICIP is being released from active duty in January 1975. An officer of the 902d MI Group Headquarters is assuming the PCO duties on an interim basis pending assignment of a PCO. Source recruitment efforts in the future will be concentrated on attempting to recruit sources who are single and have more extensive social contact in the Picatinny Arsenal and thus are better attuned to the activities of the Arsenal personnel. On 30 December 1974, the Quarterly Progress Briefing was presented by the PLO to MAJ George Carpenter, Chief, Security Office, PA. MAJ Carpenter at the briefing expressed the desire of the command that the ICIP be continued at that location.

f. Recommendation: The installation and activities are such in this case that we feel we can provide the support necessary without the use of confidential sources. Based upon the above, recommend the ICIP be terminated.

a. Location: US Army War College (USAWC), Carlisle Barracks, PA

b. Confidential Source Utilization: Three confidential sources were used during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: A suitability investigation which was started in the previous period is still in progress and a subject interview plus a polygraph examination has been conducted on the original subject, an enlisted man assigned to the USAWC staff. The suitability investigation, which involved allegations of aberrant sexual activity, has expanded to include several leads implicating three officers assigned or recently assigned to USAWC. The Commandant, USAWC, has requested suitability investigations on all personnel implicated in the allegations. A female civilian applicant applying to be rehired at USAWC has become the subject of a loyalty/suitability investigation triggered by information from sources.

e. Operational Status: COL Albert N. Stubblebine III, Commander, 902d MI Group, visited USAWC for an orientation and courtesy call on the Commandant. An ICIP briefing was presented on 6 Jan 75 to LTC Richard H. Gray, Deputy Secretary for Logistics, USAWC, upon his selection as ICIP Coordinator, succeeding COL David T. Teberg. No formal Quarterly Progress Briefing was given MG DeWitt C. Smith, Jr, Commandant, USAEC, at his specific request. The PLO briefed MG Smith six times during the quarter on specific progress made in the special suitability investigations in progress as described in d, above. Because of the frequency of these briefings, MG Smith stated that a formal quarterly briefing was unnecessary. MG Smith indicated continued satisfaction with the ICIP and the support being provided by it.

f. Recommendation: The installation and activities are such in this case that we feel we can provide the support necessary without the use of confidential sources. Based upon the above, recommend the ICIP be terminated.

DEPARTMENT OF THE ARMY
OFFICE OF THE UNDER SECRETARY
WASHINGTON, D.C. 20310

17 January 1975

MEMORANDUM FOR: VICE CHIEF OF STAFF, U.S. ARMY 21 Jan

SUBJECT: Internal Counterintelligence Program (ICIP)

I have received and reviewed the latest quarterly report of ICIP operations during 1974 as requested. In 1972 the Under Secretary authorized a trial run of this subject program. Judging from this report, the program has grown considerably and includes installations that I did not appreciate were considered sensitive. A cursory review of the data presented suggests that in more than half the cases, no useful information was obtained.

It would appear to me appropriate to review the results of this experiment to date in order to establish that the program is in fact of such a value that it should be continued in the future.

I would therefore appreciate a detailed report documenting all of the benefits, information, etc., that have been obtained through this program over the last two years. It would also be helpful to have a statement for each listed installation of the sensitive character of the mission that necessitates an ICIP operation. Finally, I would appreciate an indication of your subjective judgment as to how many of the issues that arose from these ICIP efforts would not have otherwise come to our attention.

MEMORANDUM FOR: UNDER SECRETARY OF THE ARMY

SUBJECT: Internal Counterintelligence Program (ICIP) Operations (U)

1. (U) Reference is made to memorandum, Under Secretary of the Army, dated 8 February 1972, subject as above.

2. (U) ~~(C)~~ During the third quarter of CY 1974, the ICIP at Edgewood Arsenal Maryland (CANAL LOOP) was combined with the Aberdeen Proving Ground ICIP (GONDOLA STAR). The nickname GONDOLA STAR was retained.

3. (U) ~~(C)~~ With the subsidence of anti-military activity at Fort Lewis, Washington and in the absence of a specific on-post threat, the Commanding General, 9th Infantry Division requested that the Fort Lewis ICIP (CENTAUR RACE) be terminated. This ICIP was inactivated on 22 Aug 74. During the same time frame, LENS HOLDER, a new ICIP developed at White Sands Missile Range was approved on 7 Aug 74. With the implementation of this ICIP, the total number of active ICIP operations at the close of the quarter was 19. Brief status reports are attached.

4. (U) ~~(C)~~ After briefing you on 25 September 1974 on the status of this program, the Assistant Chief of Staff for Intelligence personally reviewed and revalidated each on-going operation. Each operation will be revalidated on an annual basis hereafter. Additionally, MG Aaron has initiated a systematic review of all source dossiers to insure that all sources possess sufficient maturity and stability to enable them to function efficiently and effectively in ICIP operations.

ACTION REQUIRED

To obtain approval of the quarterly ICIP report.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. BACKGROUND: By memorandum, dated 8 February 1972 (GREEN TAB B), the Under Secretary of the Army requested the Vice Chief of Staff (VCSA), US Army, to provide quarterly reports on all ICIP operations.

2. DISCUSSION: Inclosure 1 to GREEN TAB A is a memorandum for the VCSA's signature forwarding the quarterly report for the quarter ending 30 September 1974 to the Under Secretary of the Army. GREEN TAB A forwards to the VCSA the memorandum for the Under Secretary of the Army.

3. RECOMMENDATION: That the memorandum to the VCSA at GREEN TAB A be approved and signed by the ACSI.

MIIA-SO

SUBJECT: Quarterly Reporting of Internal Counterintelligence Program (ICIP) Operations (U)

HQDA (DAMI-DOI-C)
WASH DC 20310

1. (U) Several significant changes occurred in individual Internal Counterintelligence Program (ICIP) operations during the third quarter of CY 1974. Among these was the combination of the ICIP at Edgewood Arsenal, Maryland (CANAL LOOP), with the Aberdeen Proving Ground ICIP (GONDOLA STAR) on 17 July 1974. The nickname GONDOLA STAR was retained for the resulting consolidated ICIP which will realize some savings in administrative requirements and permit a more effective utilization of available manpower.

2. (U) The Commanding General, 9th Infantry Division, and Headquarters, Fort Lewis, Washington, requested that the Fort Lewis ICIP be terminated due to the subsiding of the level of anti-military activities at that post and the absence of a specific on-post threat. With the concurrence of the Commanding General, FORSCOM, the ICIP was inactivated on 22 August 1974. The White Sands Missile Range ICIP, which had been requested in the previous quarter, was approved on 7 August 1974. Spotting and assessment for potential sources continues. With the implementation of the White Sands Missile Range ICIP, the total number of active ICIP operations at the close of the quarter is 19.

3. (U) Since the 1 July 1974 organization of the US Army Intelligence Agency, the 902d MI Group and the 525th MI Group have both experienced a reduction in personnel authorizations at all levels to include some Resident Offices which were initially established for the purpose of supporting an approved ICIP project. The reductions are impacting on some areas, especially isolated installations where servicing by both the Project Liaison Officer (PLO) and Project Case Officer (PCO) threatens to escalate TDY costs. In an effort to find a solution, the 525th MI Group has consolidated the functions of the PLO and the PCO by having the PLO perform duties for both. This measure has been put into

effect at Sierra Army Depot, Dugway Proving Ground, and Umatilla Army Depot. The 902d MI Group has experienced difficulty in maintaining PLOs full-time at Seneca Army Depot and Picatinny Arsenal. During the reporting period, PLOs at Carlisle Barracks, Fort Ritchie, and Fort Monmouth all spent a considerable amount of time on TDY and in support of other counterintelligence duties. Local Field Office Commanders are making efforts to assign their personnel to duties according to assigned priorities, but the current shortages are slowing somewhat on-going operations and hampering the development of the newly established ICIPs.

4. (U) Currently an in-depth review of each ICIP is being made with an objective of determining the effectiveness of each operation. The necessity of continuing or recommending termination of each ICIP and possible improvements which can be made are also goals of this revalidation program.

5. (U) Brief status reports for each of the active 19 ICIP operations are attached as inclosures.

1 (U) CANAL ROPE: (OACSI Approval - 17 Dec 73)

a. Location: Headquarters, US Army Communications Command and 11th Signal Group, Fort Huachuca, AZ.

b. Confidential Source Utilization: Not applicable.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: Not applicable.

d. Useful Information Obtained: Investigative data and assessment information on newly recruited sources.

e. Operational Status: One confidential source in the 11th Signal Group Crypto Facility who had been recruited in April 1974 was terminated when he lost his placement and access. He also is near the completion of his federal service. A second confidential source recruited in May 1974 in the Communications Electronics Engineering Installation Agency (CEEIA), Hq, US Army Communications Command (USACC) was terminated when continued assessment and evaluation revealed previously unknown personal and professional problems. Spotting and assessing actions are now under way to recruit new confidential sources for the operation. The CANAL ROPE PLO presented a Quarterly Progress Report on the ICIP to Mr John Maiorana, Chief, Physical Security, USACC, Ft Huachuca, on 27 September 1974. The security official indicated to the PLO that USACC was satisfied with the ICIP.

2 (U) CANARY EFFORT: (OACSI Approval - 16 Feb 72)

a. Location: Fort Ritchie, MD

b. Confidential Source Utilization: Three sources were used during the reporting period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: Three potential confidential sources are currently under assessment. Adverse suitability information alleging moral misconduct on the part of a civilian employee with a SECRET clearance was reported. The Deputy Chief of Staff, Intelligence and Security, Fort Ritchie, and the Provost Marshal have been notified and are monitoring the employee's activities. An enlisted man with a TOP SECRET clearance and assigned to the Automatic Message Processing Systems (AMPS) Branch, Telecommunications Directorate, Site "R", for temporary duty, displayed an abnormal interest in firearms, explosives, and poisons. He also displayed somewhat abnormal behavior traits. The individual's access has been suspended temporarily pending a psychiatric evaluation.

e. Operational Status: Twenty-two official sources and 14 liaison sources are contacted on a frequent basis in addition to the three confidential sources. The PIO presented the Quarterly Progress Report to the supported command on 12 September 1974. The following were present at the briefing: COL Harold G. deMoya, Commander, Fort Ritchie; LTC Arlyn R. Madsen, Director, Telecommunications, Fort Ritchie; Mr. Joseph J. Carroll, Chief, Intelligence and Security, US Army Communications Command-CONUS and HQ, Fort Ritchie; CPT Lawrence N. Brogan, Commander, Fort Ritchie Field Office, 902d MI Group; and CW2 Benjamin Struchen, HQ, 902d MI Group.

3. (C) CANARY STONE: (OACSI Approval - 18 Jul 73)

a. Location: Dugway Proving Ground, (DPG), UT

b. Confidential Source Utilization: Two confidential sources were utilized during the period.

c. Information Obtained Off-post and/or Reported on Non-Affiliated Civilians: Not applicable.

d. Useful Information Obtained: Assessment information and investigative data used for potential confidential sources. Minor suitability information on the drinking habits of three DPG employees was reported. The Installation Security Officer has been appraised of the information and will continue to monitor the behavior of the employees in coming weeks.

e. Operational Status: Two confidential sources were recruited during the reporting period and are being provided training and orientation. On 9 September 1974, a new PLO/PCO was assigned to the ICIP and the Dugway Proving Ground Resident Office. The new PLO/PCO has assumed control of both the newly recruited confidential sources used in the operation and has been engaged in thorough orientation of his new duties. On 29 August 1974, LTC Andrew J. Armstrong, Acting Commander, DPG, was briefed by the former PLO in the presence of MAJ Trevor E. Bissey, Commander, San Francisco Field Office, 525th MI Group, and Mr. Clinton E. Bair, Intelligence Officer, Security Div, DPG. LTC Armstrong provided the initial ICIP briefing to the new DPG Commander, COL Adalbert F. Toepel, Jr., on 9 September 1974. The ICIP PLO and LTC Henry F. Kale, Director of Security, DPG, will provide a more detailed briefing to the new Commander at a later date.

4. CANINE PLATE: (OACSI Approval - 18 Sep 73)

a. Location: Seneca Army Depot, Romulus, NY

b. Confidential Source Utilization: Not applicable

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: Investigative data on prospective sources.

e. Operational Status: Coverage of the Directorate for Special Weapons (DSW) presently is maintained by use of two conventional sources. Two additional prospective sources, both of whom are assigned to the military police guard force, are presently under assessment. Prolonged absence of the PLO during this period due to leave and TDY travel to other locations hampered effective development and recruitment of new sources. The PLO has identified a total of four individuals for possible use as conventional sources in support of the operation. It is the goal of the Fort Monmouth Field Office Commander to recruit an additional three or four sources by the end of the calendar year. COL Light, Seneca Army Depot Commander, has instructed the PLO to use extreme care in the recruitment of sources and expressed his desire that the ICIP be developed very slowly. No Quarterly Progress Briefing was given during the period since there were no significant items of information reported. The PLO was on extended TDY for most of the month of September.

201

5. (U) CANYON ROSTER: (OACSI Approval - 8 Mar 74)

a. Location: Umatilla Army Depot Activity (UMDA), Hermiston, Oregon

b. Confidential Source Utilization: One confidential source was utilized during this period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: Information received on the possible theft and a sale of weapons from UMDA has resulted in all weapons being placed in an area under twenty-four hour guard. A construction project has been started to build a centralized weapons storage area. As a result of a request for aerial photographs of UMDA being received by the depot, procedures have been established whereby all questionable requests for information will be routed through the PLO of the ICIP.

e. Operational Status: One confidential source was recruited during the reporting period. Seven other potential sources, four of whom are guards on various shifts at UMDA, are also under assessment and preliminary investigation. On 17 September 1974, the PLO briefed the Commander, UMDA, LTC Daniel W. Doty on the progress of the ICIP during the quarter. The briefing consisted of a review of MI activities directed toward improving the security of UMDA. LTC Doty indicated he was generally well satisfied with the program and the support rendered. It became evident during the quarter that UMDA's mission will be one of a long-term storage of conventional and toxic munitions. Although the work force is still unstable, target areas within the UMDA organizational structure have been identified and potential sources within each area are now under assessment. Liaison contacts with other Federal agencies and civilian law enforcement agencies are being developed as part of an early warning net around UMDA.

6. (U) CANVAS TAX: (OACSI Approval - 8 Mar 74)

a. Location: Sierra Army Depot (SIAD), Herlong, CA

b. Confidential Source Utilization: Not applicable.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: Investigative data on prospective confidential sources.

e. Operational Status: Overall progress in this ICIP has been extremely slow due to the non-availability of a PLO. The PLO assigned in June 1974 which was reported in the previous Quarterly Report was not continued on station. A decision was made to combine the PLO and Project Case Officer (PCO) functions in this ICIP. Continued development of the operation can be expected as soon as a PLO/PCO is on station. On 15 August 1974, the Quarterly Briefing was presented to the supported command. Those in attendance were: COL Robert Hawlk, CDR, SIAD; LTC Bernard Render, Dep CDR, SIAD; MAJ John Jolley, PM/Security Officer; SIAD; 1LT Wayne Heringer, Intelligence Officer, SIAD; and Mr. Anthony Tornabene, Asst Intelligence Officer, SIAD. LTC Clifford Fry, USAINTA Liaison Officer to HQ, Army Materiel Command, also attended the briefing. COL Hawlk, SIAD Commander, expressed his support for the concept of the operation and added that support would be provided the SIAD Resident Office when it was established.

7. (U) CANTINA ARCH: (OACSI Approval - 12 Dec 73)

a. Location: US Army Air Defense Center and Fort Bliss (USAADCENFT), TX

b. Confidential Source Utilization: Four confidential sources were utilized during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: Not applicable.

d. Useful Information Obtained: Information was reported on a person assigned to Fort Bliss with a security clearance who resides in Mexico and was allegedly dealing in gold and silver. The report was provided to the Directorate of Security (DSEC) and to the Criminal Investigation Division (CID) for further investigation. As a result of this report, the supported command now requires that all personnel holding a security clearance and residing in Mexico report this fact, along with their address. The DSEC now maintains a roster of all such personnel.

e. Operational Status: The prospective confidential source in the Emergency Operations Center who was under assessment during the last reporting period was recruited on 4 September 1974. The US Army Communications Command Agency Fort Bliss Telecommunications Center presently is being covered through the liaison efforts of the Project Liaison Officer (PLO), but efforts are being made to recruit a confidential source there in the future. On 20 September 1974, the ICIP PLO presented a Quarterly Status Report on CANTINA ARCH to CPT James E. Stevens, Acting DSEC, USAADCENFT, Ft Bliss. Speaking for the Commander, the Acting DSEC indicated that the operation seems to be progressing in a satisfactory manner. He had no other comments, recommendations or expressed problem areas. A new DSEC will be appointed in the near future and will be briefed on the operation after he assumes his duties.

c. Information Obtained Off-post and/or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: Investigative leads for possible confidential sources.

e. Operational Status: As part of his training, the one confidential source used in this ICIP was given test EEI and tasked to provide names of other potential sources. Three other potential sources, all in the Operations Division, PTC, are currently under assessment. If these sources are successfully recruited, the depth of coverage of the target area will be improved considerably. The PLO provided the Quarterly Progress Briefing on 26 August 1974 to COL Joseph T. Adinaro, Commander, PTC, and Mr. D. E. Thompson, Deputy Commander, PTC. Both the Commander and the Deputy Commander, PTC, indicated satisfaction with the support rendered by the ICIP and the progress of its development to date.

b. Confidential Source Utilization: Five confidential sources were utilized during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: A source reported that a civilian employee at Fort Monmouth was stealing US Government property. The information was passed to the Fort Monmouth CID for further investigation. Another source reported that an employee in the ECOM Directorate of Research, Development, and Engineering was planning non-official travel to Finland and the Soviet Union. Further details are being sought on the lead. A civilian physicist in the Electronics Technology and Devices Laboratory at ECOM received unsolicited correspondence from an organization calling itself the Arab Projects and Development, Beirut, Lebanon. The employee promptly notified the proper security authorities and requested permission to respond to the letter. He was granted permission by the US Army Materiel Command, answered the initial letter and received a reply in September 1974. Investigation to date has revealed little information concerning Arab Projects and Development but the assets in the ICIP will continue to monitor future activity.

e. Operational Status: In addition to the five confidential sources being contacted regularly in this ICIP, thirteen conventional sources provide additional coverage of ECOM target areas. Among four employees presently being assessed as possible sources, one has been dropped from further consideration due to refusal to cooperate in the program. There are three remaining under active consideration. The PLO presented the Quarterly Progress Briefing on 30 September 1974 to COL John Sanderson, Security Officer, ECOM, and ICIP Project Coordinator for ECOM. COL Sanderson indicated command satisfaction with the type of information and support rendered by this ICIP.

12. (U) CENTURY SQUAD: (OACSI Approval - 3 Oct 73)

a. Location: US Army Management Systems Support Agency (USAMSSA), The Pentagon, Washington, DC

b. Confidential Source Utilization: One confidential source was utilized during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: None.

e. Operational Status: Only one confidential source has been recruited to date in this operation. The PCO has been devoting most of the meeting periods to further training and testing of this source. In addition to training, the source is being tasked to provide names and leads for additional possible sources. Two other employees of the Operations Division, USAMSSA, are being evaluated as potential sources. The Quarterly Briefing of the supported command was presented by the PLO on 18 September 1974 to Mr. John R. Bjork, Security Manager, USAMSSA. The Director and his security staff continue to support the operation fully and have offered every assistance to aid in its development.

13 (U) GONDOLA FLAG: (OACSI Approval - 22 Apr 74)

a. Location: US Army Electronic Proving Ground (USAPEG), Fort Huachuca, AZ

b. Confidential Source Utilization: Not applicable.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: Additional investigative data on a prospective confidential source.

e. Operational Status: The prospective source, located in the Electromagnetic Branch, USAEPG, is in the final stages of assessment and recruitment is expected during the next reporting period. Efforts to spot and recruit sources in this comparatively new ICIP were somewhat hampered by the transfer of the PLO during the period. On 27 September 1974, the PLO gave the Quarterly Progress Report to Mr. Henry O. Dupes, Director of Security, USAEPG, Ft Huachuca, AZ, who stated that the Commander, USAEPG, was satisfied with the progress of the ICIP to date.

14(U) GONDOLA STAR: (OACSI Approval - 17 Feb 72)

a. Location: Aberdeen Proving Ground (APG), MD

b. Confidential Source Utilization: Eight confidential sources were used during the reporting period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: A report of an employee who travelled to Poland with his two sons triggered a request for an investigation by the supported command of the employee's foreign travel and extent of his foreign connections when it was learned that he plans to send his eldest son to Poland on some type of foreign exchange program. Another employee planned travel to Czechoslovakia in Aug 74, but postponed his trip to 1975 when he was hospitalized. The supported command does not desire an investigation immediately, but has requested continued monitoring by the ICIP. A man and wife physicist team have had their access to classified information suspended while an investigation is conducted concerning their alleged loose moral conduct andabuse of alcohol. A confidential source reported that a cipher lock installed on a door to a Data Processing Office of the US Army Test and Evaluation Command (TECOM), APG, had been altered so the door could be opened without using the combination. Investigation revealed that the lock had been installed and made operational to check for possible defects and subsequently disconnected. The lock was disconnected pending installation of a telephone at the door for use by persons not having the combination in order to call for escort. The telephone has now been installed and the cipher lock has been re-connected.

e. Operational Status: During the reporting period, limited progress was made in increasing ICIP support to the serviced activities since duties not directly related to the ICIP required the greatest portion of the PLO's time. One confidential source was terminated due to loss of placement and access. One confidential source with placement in Edgewood Arsenal was recruited. Three other potential sources are still under assessment. On 25 September 1974, COL Alvin D. Ungerleider, newly assigned Commander, APG, was given both the initial ICIP Briefing and the Quarterly Progress Briefing. Mr. Harry A. Mencke, Installation Intelligence Officer (IIO), APG, was present for both briefings. The PLO gave a Quarterly Progress Briefing on 26 September 1974 to COL Kenneth L. Stahl, Commander, Edgewood Arsenal, APG, and MAJ Walter W. Stansberry, Chief of Security, Edgewood Arsenal.

15 (U) GONG SILK: (OACSI Approval - 16 Feb 72)

a. Location: Picatinny Arsenal (PA), Armament Command, US Army Materiel Command, Dover, NJ

b. Confidential Source Utilization: Three confidential sources were used during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: A source reported that a PA employee frequently used a substance which appeared to be a narcotic during duty hours, then left his work area to sleep in parked cars. The information was passed to the PA security officials with a recommendation that a limited investigation be conducted. Another PA employee of the Ammunition Development and Engineering Directorate (ADED) was reported to be under the care of a psychiatrist. Investigation revealed that the PA Civilian Personnel Office and the employee's supervisors were aware of the problem. Although the employee continues to have access to classified defense information, his workload has been significantly reduced and all of his activities at ADED are closely supervised. A confidential source reported that combinations on adjacent security containers in the Nuclear Development and Engineering Directorate were set in numerical sequence, a practice in contravention of security regulations. Security officials were briefed on the weakness and have taken corrective action.

e. Operational Status: A new PIO has assumed duties who has devoted much of his efforts acquiring area knowledge, establishing source rapport and acquiring on-the-job experience. Due to a personnel shortage, the PIO no longer is able to spend his full time with the supported command, but the commander of the Fort Hamilton Resident Office performs the PIO duty on a TDY basis. This will serve to make spotting and assessing of future sources difficult. On 20 September 1974, the PIO presented the Quarterly Progress Briefing to MAJ George Carpenter, Chief, Security Office, PA. MAJ Carpenter indicated during the briefing that the command was satisfied with the service provided by the ICIP.

b. Confidential Source Utilization: None

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: Investigative data on a potential confidential source.

e. Operational Status: As reported previously, DLIEC is being phased out during Fiscal Year 1975 in preparation for its move to DLIWC, Presidio of Monterey, CA. For that reason, a concerted effort is not being made to recruit large numbers of sources, although at present one potential source is being assessed. The move to the Presidio of Monterey will be completed by 1 Jul 75. DLIEC security records have been shipped to DLIWC. The PIO presented the Quarterly Progress Briefing in the ICIP to CPT Richard W. Pederson, Security Officer, DLIEC, on 16 September 1974. The Commandant and the Security Manager continue to provide cooperation and no problems exist at this time.

a. Location: US Army War College (USAWC), Carlisle Barracks, PA

b. Confidential Source Utilization: Three confidential sources were used during the reporting period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: Numerous reports were made on USAWC personnel during the period, primarily on suitability, but ranging from drug abuse to aberrant sexual activity. Five military policemen were apprehended for narcotics abuse; their security clearances were suspended and they were removed from sensitive duties. Of the total of 13 suitability cases reported during the period, security clearances were suspended for 6; investigations have been requested for 4; 1 individual was dismissed from USAWC; 1 has been reassigned, and the activities of the one remaining are being monitored. With the addition of the US Army Military History Research Collection to USAWC, both the ICIP PLO and the Ft Ritchie Field Office personnel have provided security support and assistance in the form of a Counter-intelligence Survey and identification of security weaknesses and deficiencies.

e. Operational Status: The PLO served as Acting USAWC Security Manager during a three-week absence of the incumbent and has now established at least one after duty hours CI inspection per week with the approval of COL D. T. Teberg, ICIP Coordinator. On 5 August 1974, MG DeWitt C. Smith, Jr., Commandant, USAWC, was provided his initial ICIP briefing. Following that briefing, MG Smith requested that he be briefed on significant developments of the operation at least monthly rather than quarterly. MG Smith was given a second briefing on 30 Aug 74. The PLO presented an initial ICIP briefing to COL William M. Whitesel, Deputy Commanding Officer, Carlisle Barracks, on 3 September 1974

d. Useful Information Obtained: Initial spotting and assessment actions are taking place.

e. Operational Status: During the processing of applicants for MI, the PLO has identified two potential sources for this ICIP, which is the most recently implemented operation. The ICIP PLO briefed MG Robert J. Proudfoot, Commanding General, WSMR, on the implementation of the ICIP on 16 September 1974. MG Proudfoot verbally approved the operation which had been requested by his predecessor, MG Sweeney. MG Proudfoot stated that he desired a progress briefing on the ICIP in two or three months. LTC Carl I. Davis, Chief of Security, WSMR; and Mr. William F. Arket, Chief, Intelligence Div, WSMR, also attended the briefing.

a. Location: Defense Language Institute West Coast (DLIWC), Presidio of Monterey, CA

b. Confidential Source Utilization: Nine confidential sources were utilized during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: The Czech "Pen-Pal" incident and the visit of a Polish national with his brother, a DLIWC instructor, reported in the last period, are still under investigation. Information concerning a new "pen-pal" relationship was reported, this one involved a US Air Force student. The airman exchanged several letters with a Polish citizen and sent him money for the purchase of Polish magazines. The Polish citizen commented in his letters that he believes the letters are being checked by Polish officials, since one was received in an opened condition. Information on this incident has been passed to the Air Force. Information surfaced that an instructor of the Polish Language Department has a radio transmitter at his residence is presently being investigated. Another report that unauthorized radio transmissions were being heard in the Fort Ord area is being evaluated by the National Security Agency (NSA). Two Soviet citizens, allegedly language instructors for the Soviet Government, visited DLIWC on a State Department sponsored trip. The State Department did not provide an escort and the visitors were able to visit the Russian Language Department unescorted. The DLIWC Security Officer has taken steps to prevent a recurrence of this type of incident and especially to insure that all visitors are properly escorted. Suitability information concerning student personnel continued to be reported and was passed to the appropriate authorities. Information received from another government investigative agency and amplified by the ICIP sources indicates that the Arabic Trade Mission located in San Francisco is gathering data on DLIWC Arabic students. During a class visit to the Arabic Trade Mission, DLIWC Arabic students were required to sign a guest register, listing their names and addresses. The reason for the register was allegedly so that additional printed information could be sent to the students. The students were also given anti-Israel propaganda.

e. Operational Status: Five confidential sources were terminated during the period due to graduation. Reduction of case officer personnel on the project to one full-time and one part-time case officer may make it necessary to limit the number of confidential sources handled to five.

At present, four confidential sources are active; two potential sources, including one instructor, are under assessment. In the future, confidential sources will be recruited on a staggered basis, with no more than two sources recruited in any one quarter. This will prevent the loss of several sources at one time due to graduation. The PIO presented the Quarterly Progress Report on 19 Sep 74 to LTC Max Newman, Secretary, DLIWC; MAJ Richard Erickson, Security Officer, DLIWC; and CPT Edward N. Janecki, Commander, Fort Ord Field Office, 525th MI Group. LTC Newman expressed appreciation for information furnished through the project and requested that briefing be planned for mid-October 1974 for the new incoming Director, DLIWC, COL Koenig.

MEMORANDUM FOR THE RECORD

SUBJECT: ICIP Briefing for Under Secretary of the Army (U)

1. (U) ~~(C)~~ On 25 September 1974 MG Aaron briefed Mr. Herman Staudt, on the ICIP. Mr. Staudt expressed reservations about operational control within the program and concern about the sudden rapid growth. He wanted assurances that the program was carefully monitored precluding the possibility for embarrassment.

2. (U) ~~(C)~~ General Aaron assigned the following tasks to USAINTA through Mr. Leslie Hime, the USAINTA representative at the meeting.

a. Prepare all the operations plans for review; General Aaron will personally re-validate each plan.

b. Prepare source dossiers for review. General Aaron wants to be able to personally be assured that all sources are of such maturity and stability that they would not cause any embarrassment to the Army.

3. (U) ~~(C)~~ General Aaron will personally validate and approve all future operations plans and will assume command and control of the program. Only essential plans will be approved and permitted to continue. General Aaron did not consider the operation at the War College to be essential.

4. (U) Operations plans and dossiers will be reviewed on 4 October 1974.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) Operations

OFFICE SYMBOL: DAMI-DOI-C

SUSPENSE:

DATE: 6 August 1974

ACTION REQUIRED: To obtain approval of the quarterly ICIP report.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. BACKGROUND:

a. By memorandum, dated 8 February 1972 (ORANGE TAB B), the Under Secretary of the Army requested the Vice Chief of Staff (VCSA), US Army, provide quarterly reports on all (ICIP) operations.

b. This is the nineth such quarterly report.

c. The quarterly report of current operations for the quarter ending 31 March 1974 is at (ORANGE TAB C).

30 Jun 74

2. DISCUSSION:

a. Inclosure 1 to ORANGE TAB A is a memorandum for the VCSA's signature forwarding the quarterly report to the Under Secretary of the Army.

b. ORANGE TAB A forwards to the VCSA the memorandum and ICIP Quarterly Report.

3. RECOMMENDATION: That the memorandum to the VCSA at ORANGE TAB A be approved and signed by the ACSI.

MEMORANDUM FOR: UNDER SECRETARY OF THE ARMY

SUBJECT: Internal Counterintelligence Program (ICIP) Operations (U)

1. (U) Reference is made to memorandum, Under Secretary of the Army, dated 8 February 1972, subject as above.

2. (U) Progress in the second quarter of CY 1974 in the ICIP was characterized by a sizeable increase in the number of Confidential Sources utilized in the various ICIPs. Thirty-six Confidential Sources have been recruited, an increase from 27 in the preceding quarter. One request for an ICIP was received during the period which requested ICIP coverage at the White Sands Missile Range, White Sands, New Mexico. Brief status reports are attached.

3. (U) As Army reorganization results in some shifts of facilities to other locations, the consolidation of ICIP operations continues in the interest of more efficient management and administration. The ICIP LANDLESS TIME (U), which formerly supported the Philadelphia Facility of the US Army Electronics Command, has been consolidated with the ICIP CENTRAL TAXI (U), which supports Electronics Command at Fort Monmouth, New Jersey. A similar revised plan is being written in which the ICIP CANAL LOOP (U) at Edgewood Arsenal, Maryland, will be combined with the Aberdeen Proving Ground ICIP GONDOLA STAR (U). Including these consolidations, there were 19 ICIP operations active at the close of the period. The White Sands Missile Range ICIP, for which implementation is expected early in the next quarter, will bring this total to 20.

4. (U) As I mentioned to you in my memorandum of 30 April 74, the primary value of ICIP operations is in their potential for early warning and detecting internal security weakness and security threats to the supported command. Inasmuch as these operations are a form of intensified security watchfulness, negative reports in themselves are frequently of value to a commander in planning for security requirements of a given installation or activity.

SUBJECT: Quarterly Reporting of Internal Counterintelligence Program (ICIP) Operations (U)

HQDA (DAMI-DOI-C)
WASH DC 20310

1. (U)(C) Progress in the second quarter of CY 1974 in the ICIP was characterized by a sizeable increase in the number of Confidential Sources utilized in the various ICIPs. Thirty-six Confidential Sources have been recruited, an increase from 27 in the preceding quarter. One request for an ICJP was received during the period which requested ICIP coverage at the White Sands Missile Range, White Sands, New Mexico.

2. (U)(C) As Army reorganization results in some shifts of facilities to other locations, the consolidation of ICIP operations continues in the interest of more efficient management and administration. The ICIP LANDLESS TIME (U), which formerly supported the Philadelphia Facility of the US Army Electronics Command, has been consolidated with the ICIP CENTRAL TAXI (U), which supports Electronics Command at Fort Monmouth, New Jersey. A similar revised plan is being written in which the ICIP CANAL LOOP (U) at Edgewood Arsenal, Maryland, will be combined with the Aberdeen Proving Ground ICIP GONDOLA STAR (U). Including these consolidations, there were 19 ICIP operations active at the close of the period. The White Sands Missile Range ICIP, for which implementation is expected early in the next quarter, will bring this total to 20.

3. (U)(C) Significant progress in the operations at Sierra and Umatilla Army Depots is expected during the coming quarter. The Project Liaison Officer arrived at Sierra Army Depot on 19 June 1974. Two prospective sources, spotted during TDY trips to the installation by personnel from the San Francisco Field Office, are presently under assessment. A similar situation exists at the Umatilla Army Depot at Hermiston, Oregon. The Project Liaison Officer became operational at that facility on 30 June 1974, at the close of the quarter. TDY trips pending the assignment and arrival of the PLO have resulted in having 19 civilian

2. (U) ~~(C)~~ CANARY EFFORT: (OACSI Approval - 16 Feb 72)

a. Location: Fort Ritchie, MD.

b. Confidential Source Utilization: Three sources were used during the reporting period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: Information developed on 15 US Army personnel involved in drug abuse-related incidents was passed to the ICIP Coordinator. Adverse suitability information developed on a soldier assigned to the Operations Company, Fort Ritchie. The soldier, whose clearance was suspended, was transferred to Kimbrough Army Hospital, Fort Meade, for psychiatric evaluation on 28 May 1974. Alleged moral misconduct on the part of a WAC was reported to the ICIP Coordinator. The supported command is monitoring the activities of the WAC to determine if an investigation is warranted. Information obtained on alleged threats against the lives of three Military Police investigators was provided the Fort Ritchie Commander and the ICIP Coordinator. The US Army Criminal Investigation Department Command (USACIDC) is conducting an investigation.

e. Operational Status: In addition to the confidential sources used, three potential new sources are under assessment. Twenty-one conventional sources and thirteen liaison sources are contacted on a regular basis. The Quarterly Progress Briefing, scheduled for 15 June 1974, was postponed until July 1974 because the Fort Ritchie Commander was not available.

b. Confidential Source Utilization: Not applicable.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: Not applicable.

d. Useful Information Obtained: Investigative data on potential sources.

e. Operational Status: Three confidential sources were successfully recruited during the period. Two of the sources are in the Office of the Deputy Commandant for Combat and Training Developments and the third is in the Ballistic Missile Defense Department, both of which are on the prime targets list of the ICIP. An approach plan is being devised for a prospective source in the Emergency Operations Center. Two other individuals currently under assessment work in the Ballistic Missile Defense Department and the Telecommunications Center. The ICIP PLO briefed COL George M. Hamscher, Director of Security, USAADCENFB, on the status of CANTINA ARCH on 14 Jun 74. COL Hamscher has indicated a keen interest in the progress of the ICIP and is satisfied with the successful recruitment of sources during this period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: Investigative data on prospective confidential sources.

e. Operational Status: The project has been delayed in its initial stages due to non-availability of a Project Liaison Officer. Pending arrival of the PLO, San Francisco Field Office personnel established liaison with the Commander of SIAD and his staff and also initiated spotting and assessment actions for potential confidential sources. At present, two individuals are under assessment and preliminary investigations are being conducted on them. The PLO arrived on station on 19 Jun 74 and considerable operational progress is expected during the next quarter.

a. Location: Umatilla Army Depot Activity, Hermiston, Oregon.

b. Confidential Source Utilization: Not applicable.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: Investigative data on potential conventional and confidential sources.

e. Operational Status: Despite the absence of an established Resident Office at Umatilla or a PLO at the supported activity for the reporting period, considerable progress was made in establishing liaison contacts and spotting and assessing potential confidential sources. This has been accomplished by personnel from the Fort Lewis Field Office performing TDY trips to the Umatilla Army Depot. At present nineteen civilian employees of the Depot are under assessment. One CIRL has been approved for recruitment and a Lead Development Report has been submitted on a second one. The Commander, Fort Lewis Field Office, contacted LTC Harold Echols, Commander, Umatilla Army Depot, on 11 Jun 74, to arrange for the first Quarterly Progress Briefing. The Commander stated he desired a briefing later after the new PLO had sufficient time to become established. The PLO became operational on 30 Jun 74.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: Not applicable.

d. Useful Information Obtained: Investigative data on prospective sources.

e. Operational Status: One confidential source, assigned to the Operations Division, Pentagon Telecommunications Center (PTC), was recruited during the reporting period. This source is being trained by the PCO and appears to have excellent potential for covering the target. Two other individuals, assigned as Communications Relay Operators, are being assessed as potential confidential sources. Recruitment of either one or both of these sources will improve the coverage of the target area. The PTC Director is appreciative of the progress being made in the ICIP and his staff of security officials are completely cooperative.

9. ~~(C)~~ (U) CENTAUR RACE: (OACSI Approval - 30 Jul 73)

a. Location: Ninth Infantry Division and Fort Lewis, WA.

b. Confidential Source Utilization: Three confidential sources were utilized during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: A confidential source reported that a soldier assigned to the 9th AG Company, Fort Lewis, Washington, exhibited signs of affluence beyond the normal financial capacity of a soldier in his grade. A limited investigation is being conducted. No significant counter-intelligence information was developed during the period, and all indications are that anti-military/dissident activity has subsided to a low level.

e. Operational Status: Spotting and assessment of potential sources continues to be emphasized in an effort to improve the ICIP coverage. Three confidential sources were recruited during this period. In addition to these, twenty conventional sources are used, as well as six official liaison sources. Nine individuals currently are under assessment for use as conventional or confidential sources. The Fort Lewis Field Office Commander presented a quarterly progress briefing on 21 Jun 74 to BG McFadden, Asst Division Commander, 9th Infantry Division, Fort Lewis. COL Kenneth Koch, Chief of Staff, and LTC Roy Davis, AC of S, G2, 9th Inf Div, were also in attendance. The 9th Infantry Division Asst Commander and the AC of S, G2, are preparing to recommend to the Division Commander that CENTAUR RACE be terminated because of a lack of specific, identifiable targets.

d. Useful Information Obtained: Investigative data on potential sources.

e. Operational Status: A new PLO was appointed effective 14 Jun 74 due to the PCS of the present PLO. A series of thefts have occurred at the Adelphi, Maryland, Harry Diamond Laboratories (HDL) facility. The PLO provided some assistance to the Security Office and the Federal Bureau of Investigation (FBI) during its investigation. The results of the FBI investigation of the prime suspect were negative and no further action has been taken. Two individuals who are employed in the facilities are under assessment as potential confidential sources. The quarterly ICIP Progress Briefing was presented on 7 Jun 74 to the ICIP Coordinator and Security Officer, Mr. Alfred F. Schneder, and Mr. James H. Yeick, Asst Security Officer, HDL. The briefing was presented by the former PLO who introduced the new PLO to the HDL security staff at the time.

12. (U) CENTRAL TAXI: (OACSI Approval - 16 Feb 72)

a. Location: Headquarters, US Army Electronics Command (ECOM), Fort Monmouth, New Jersey.

b. Confidential Source Utilization: One additional source was recruited, bringing the total utilized to five.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) An ECOM civilian employee regularly engages in foreign travel. This information was brought to the attention of the ICIP Coordinator purely as a matter of interest since the employee is not in violation of existing regulations and none of the travel has been made to a Soviet bloc country.

(2) Another ECOM employee was arrested on 3 May 74 on a federal misdemeanor for her part in alleged forgery of US Government checks by the US Secret Service in Newark, New Jersey. The federal authorities released the employee because of her cooperation and set bail at $1,000. The information was passed to the ICIP Coordinator who informed the Provost Marshal's O-fice and the CID. Removal of the individual's security clearance is pending.

e. Operational Status: A revised Operations Plan was submitted during the period which consolidated ICIP LANDLESS TIME with CENTRAL TAXI. The consolidation resulted from the closing of the ECOM Philadelphia Facility and its subsequent transfer to ECOM, Fort Monmouth, NJ. A new PLO assumed duties in May 74. In addition to the five confidential sources used in the ICIP, ten conventional sources are being used, and one prospective sources is under assessment. Target coverage by conventional sources has been expanded to cover the Avionics Laboratory, Comptroller Office, and the Directorate of Procurement and Production. The Fort Monmouth Field Office Commander presented the Quarterly Progress Report Briefing to LTC Richard O. Aamot, Chief, Security Officer, ECOM, on 4 June 1974. LTC Aamot stated that he is most pleased with the continuing progress and effectiveness of CENTRAL TAXI and the security support being provided to ECOM by the ICIP. All priority targets are covered by conventional sources or by confidential sources.

15. (U) GONDOLA STAR: (OACSI Approval - 17 Feb 72)

a. Location: Aberdeen Proving Ground (APG), MD.

b. Confidential Source Utilization: Two sources were used during the reporting period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) A confidential source reported the possibility that classified information may have been compromised by having been published in an unclassified publication. A follow-up report established that the information was not classified.

(2) A conventional source reported that a civilian employee of the Behavioral Research Directorate, Human Engineering Laboratory (HEL), Aberdeen Proving Ground, had some foreign professional contacts made in the line of duty. No unusual activity was reported; however, the situation is being monitored for unusual activity or interests.

(3) A confidential source surfaced the possibility that APG contractors were receiving unauthorized information pertaining to contracts being processed by the APG Procurement Directorate. Subsequent checks with APG authorities disclosed that the information being disclosed was not only authorized, but it was in fact required to be disseminated by regulation.

e. Operational Status: Three conventional sources are presently under assessment as potential new sources to expand and improve the target coverage in this ICIP. the PLO has established several worthwhile contacts in the Ballistics Research Laboratory (BRL) and make the presence of MI better known in this key target facility. No basic change in priority for ICIP coverage occurred in this current quarter, but coverage of the US Army Materiel Systems Analysis Agency (AMSAA) will receive greater emphasis in the next quarter. On 20 Jun 74, COL Walter R. Harris, Commander, APG, and Mr. Harry A. Mencke, Installation Intelligence Officer (IIO), APG, were given the Quarterly Progress Briefing on GONDOLA STAR. Both the APG Commander and the APG IIO expressed strong and continuing interest in the ICIP and pledged their full support and cooperation.

16. ~~(C)~~ GONG SILK: (OACSI Approval - 16 Feb 72)

a. Location: Picatinny Arsenal (PA), Dover, NJ.

b. Confidential Source Utilization: Three confidential sources were used during the reporting period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: A confidential source reported suitability information concerning two PA employees who were allegedly emotionally unstable and had bad tempers. Security officials at PA took appropriate action following the incidents. Another source reported that two employees at PA were engaged in selling stolen merchandise. Initial information, in the form of hearsay, was too fragmentary; attempts are being made to obtain further details. As part of the effort to respond to EEI on Extremist Threat Against the US Army, PA Security Office records were examined to identify PA employees born in Arabian countries. Biographical data on four such employees was submitted in Agent Reports which were placed in appropriate dossiers of the individuals. The files search revealed nothing indicating connections with any known extremist activity.

e. Operational Status: In addition to the three confidential sources, 11 conventional sources are being met on a regular basis. Spotting and assessing activities, held in abeyance during April and May until PA employees had received Reduction in Force (RIF) notices, has now been resumed. In the course of the RIF 418 positions were deleted, and 1,700 employees were affected. The PA Security Office has been changing its manual document security procedures to the Controlled Accountable Document Inventory System (CADIS), a computerized system of accountability. The 109th MI Group Security Assistance Program representative and the PLO provided considerable assistance to PA in its preparation for CADIS. On 3 Jun 74, the Quarterly Progress Briefing was presented by the PLO to MAJ George A. Carpenter, Chief, Security Office, PA, and Mr. John R. Greffe, Asst Chief of the PA Security Office.

18. (U) LENIENT CLOUD: (OACSI Approval - 16 Feb 72)

a. Location: US Army War College (USAWC), Carlisle Barracks, PA.

b. Confidential Source Utilization: Three sources used during the reporting period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: The investigation concerning the financial activities of the captain reported during the last quarter has been completed except for a subject interview. The officer was assigned to less sensitive duties on 6 May 74 and will be transferred to Indiantown Gap Military Reservation in Jul 74. A limited investigation was conducted on a soldier assigned to Carlisle Barracks for reported use of narcotics.

e. Operational Status: In addition to the three confidential sources used in the operation, 35 conventional sources are contacted on a recurring basis. Target research provided to the Security Manager, USAWC, was sufficient justification for assignment of two full-time Military Police sentinels in Root Hall, an aid toward accomplishing a completely restricted access to the USAWC. Research is continuing on the best ways of restricting movement within Root Hall, to include surveys of electronic and mechanical equipment. Use of such equipment and reconfiguration of Root Hall is planned for Fiscal Year 1975. The PLO assisted in the preparation of security directives relative to the USAWC Military Research Program (MRP) in which student officers travel to foreign countries to obtain information for their thesis. The PLO also coordinated with elements of the 902d MI Group concerning MRP travellers in respect to Army Regulation 381-15. The PLO gave a Quarterly Progress Briefing to MG Franklin M. Davis, Jr., Commandant, USAWC, on 7 Jun 74. MG Davis indicated that he was very enthusiastic with the support received from LENIENT CLOUD and also that he expected the in-coming USAWC Commandant, MG DeWitt Clinton Smith, would be as receptive toward continuation of the ICIP.

19. (U) LENTIL MONKEY: (OACSI Approval 26 Oct 71)

a. Location: Defense Language Institute West Coast (DLIWC), Presidio of Monterey, CA.

b. Confidential Source Utilization: Nine sources were utilized during the period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: A confidential source reported a May 74 incident involving an approach made to Czech language students on a picnic to engage in a pen-pal relationship with residents of Czechoslovokia. Details of this latest incident and previous incidents are being further investigated by the 902d MI Group and coordinated with the Federal Bureau of Investigation. An instructor in the Polish Language Department was visited by his brother, a Polish national, who also attended a picnic with students and instructors of the Polish Language Department. Further inquiries are underway with other Federal Agencies concerning the visitor. Verbal information given to the DLIWC Security Office concerning the homosexual activities of a student was used as a partial basis for separation action. Sources provided valuable background and biographic data on DLIWC instructors born in foreign countries which now have Communist Governments. This information is used to update target data files on instructors who might be potential targets of hostile intelligence.

e. Operational Status: Eleven conventional sources are currently used in the ICIP. During the quarter, five confidential sources were recruited while four were terminated because of their graduation. Source Lead and Development Reports have been prepared on two prospective sources and an additional seven new leads are undergoing initial investigation. The new recruitment efforts are being directed at Priority II Language Departments since present sources are located in Priority I language areas. The ICIP PLO presented the Quarterly Progress Briefing on 14 Jun 74 to COL John F. Hook, Commandant, DLIWC, MAJ Richard Erickson, Security Officer, DLIWC, and Mr. James R. Green, Asst Security Officer, DLIWC. COL Hook expressed his appreciation for the briefing and stated that he believed the Operation was achieving its objectives and had improved the security posture of DLIWC.

ACTION SHEET

TROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) Operations

OFFICE SYMBOL: DAMI-DOI-S

SUSPENSE:

DATE: 19 April 1974

ACTION REQUIRED: To obtain approval of the quarterly ICIP report.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. BACKGROUND:

a. By memorandum, dated 8 February 1972 (ORANGE TAB B), the Under Secretary of the Army requested the Vice Chief of Staff (VCSA), US Army, provide quarterly reports on all (ICIP) operations.

b. This is the eighth such quarterly report.

c. The quarterly report of current operations for the quarter ending 31 March 1974 is at (ORANGE TAB C).

2. DISCUSSION:

a. Inclosure 1 to ORANGE TAB A is a memorandum for the VCSA's signature forwarding the quarterly report to the Under Secretary of the Army.

b. ORANGE TAB A forwards to the VCSA the memorandum and ICIP Quarterly Report.

3. RECOMMENDATION: That the memorandum to the VCSA at ORANGE TAB A be approved and signed by the ACSI.

DEPARTMENT OF THE ARMY
OFFICE OF THE CHIEF OF STAFF
WASHINGTON, D.C. 20310

30 April 1974

MEMORANDUM FOR: UNDER SECRETARY OF THE ARMY

SUBJECT: Internal Counterintelligence Program (ICIP) Operations (U)

1. (U) Reference is made to memorandum, Under Secretary of the Army, dated 8 February 1972, subject as above.

2. (U) The seventeen Internal Counterintelligence Program (ICIP) Operations reported by memorandum to you last quarter remain active. Three new operations submitted during the quarter covered by this report have been reviewed at DA and approved for implementation. The list of current operations and narrative summary for the quarter ending 31 March 1974 are attached. Adjustments to ICIP operations will be made in the next quarterly report to conform with Army reorganization.

3. (C) The primary value of ICIP operations is in their potential for early warning and detecting internal security weakness and security threats to the supported command. Inasmuch as these operations are a form of intensified security watchfulness, negative reports in themselves are frequently of value to a commander in planning for security requirements of a given installation or activity.

ICIP Narrative Summary

There were no instances in which information on non-affiliated civilians was collected off post.

Progress in the development of information of counterintelligence value is slow. All significant reporting during the quarter has come about through the use of confidential sources with critical placement and access; however, to date, only 10 of the 20 ICIPs have confidential sources of information. Guidance has been provided the Intelligence field units to upgrade their efforts in the recruitment of confidential sources. The USAINTC has placed increased efforts on the use of conventional source contact by the Army counterintelligence units servicing installations not employing formal ICIPs. This effort may provide indications that such ICIP operations are warranted on the posts or installations. Emphasis on acquiring such conventional installation sources has been placed at Forts Rucker, Sheridan, Sill, Polk, Sam Houston, and McClellan.

Information of counterintelligence value developed during the 1st quarter of CY 74 came from six of the 20 counterintelligence programs in operation. The significant information was concerned primarily with adverse suitability and weaknesses in security practices. Typical of the information developed is that uncovered in the following two operations. Operation CANARY EFFORT developed information of adverse suitability on an Army captain, who eventually offered to resign from the Army and similar information on a Military Police investigator who subsequently was reassigned less sensitive duties. Adverse suitability information considered of lesser significance was reported on 17 other individuals assigned to the Communications Command, Ft. Ritichie, Md. Thirteen of these US Army personnel were involved in drug related activity. Operation CENTRAL TAXI revealed information concerning a highly placed employee in contact with foreign export companies, some of which are located within the Soviet Bloc. Poor security practices in several other instances at the Electronics Command have been brought to the attention of the Chief of Security, Ft. Monmouth.

Progress has been made in simplifying the procedural steps which must be followed to implement an ICIP operation. The establishment of an umbrella or basic OPLAN which precludes the preparation of lengthy separate plans at the unit level was approved by OACSI. This action was considered appropriate as all ICIP plans have sufficient common elements to permit utilization of a single basic plan. Operations plans will, in the future, be "fleshed out" by appropriate detailed annexes. This procedural change will significantly reduce the time from requestor to the time when the approved plan can be implemented.

The Army reorganization has caused two ICIPs to be combined with existing ICIPs. At the end of the reporting period, there was a total of 20 operations including one pending approval. It is planned that two additional

Page 1747 of 3957

ICIP plans will be submitted for approval during the second quarter 1974.

Supported commanders continue to express their support for the program and their satisfaction with the results. The ICIP operations will be continued for their original stated purposes.

ICIP Narrative Summary

There were no instances in which information on non-affiliated civilians was collected off post.

Progress in the development of information of counterintelligence value is slow. All significant reporting during the quarter has come about through the use of confidential sources with critical placement and access; however, to date, only 10 of the 20 ICIPs have confidential sources of information. Guidance has been provided the Intelligence field units to upgrade their efforts in the recruitment of confidential sources. The USAINTC has placed increased efforts on the use of conventional source contact by the Army counterintelligence units servicing installations not employing formal ICIPs. This effort may provide indications that such ICIP operations are warranted on the posts or installations. Emphasis on acquiring such conventional installation sources has been placed at Forts Rucker, Sheridan, Sill, Polk, Sam Houston, and McClellan.

Information of counterintelligence value developed during the 1st quarter of CY 74 came from six of the 20 counterintelligence programs in operation. The significant information was concerned primarily with adverse suitability and weaknesses in security practices. Typical of the information developed is that uncovered in the following two operations. Operation CANARY EFFORT developed information of adverse suitability on an Army captain, who eventually offered to resign from the Army and similar information on a Military Police investigator who subsequently was reassigned less sensitive duties. Adverse suitability information considered of lesser significance was reported on 17 other individuals assigned to the Communications Command, Ft. Ritichie, Md. Thirteen of these US Army personnel were involved in drug related activity. Operation CENTRAL TAXI revealed information concerning a highly placed employee in contact with foreign export companies, some of which are located within the Soviet Bloc. Poor security practices in several other instances at the Electronics Command have been brought to the attention of the Chief of Security, Ft. Monmouth.

Progress has been made in simplifying the procedural steps which must be followed to implement an ICIP operation. The establishment of an umbrella or basic OPLAN which precludes the preparation of lengthy separate plans at the unit level was approved by OACSI. This action was considered appropriate as all ICIP plans have sufficient common elements to permit utilization of a single basic plan. Operations plans will, in the future, be "fleshed out" by appropriate detailed annexes. This procedural change will significantly reduce the time from requestor to the time when the approved plan can be implemented.

The Army reorganization has caused two ICIPs to be combined with existing ICIPs. At the end of the reporting period, there was a total of 20 operations including one pending approval. It is planned that two additional

Page 1751 of 3957

ICIP plans will be submitted for approval during the second quarter 1974.

Supported commanders continue to express their support for the program and their satisfaction with the results. The ICIP operations will be continued for their original stated purposes.

10 APR 1974

ICDO-OP

SUBJECT: Quarterly Reporting of Internal Counterintelligence Program (ICIP) Operations (U)

HQDA (DAMI-DOI-S)
WASH DC 20310

REGRADED UNCLASSIFIED
ON SEP 5 1997
BY CDR USAINSCOM F01/PO
AUTH Para 1-603 DOD 5200.1R

1. (C) Progress in the ICIP continued during the first quarter of CY 1974. The accession rate dropped from six requests in the previous quarter to three for the reported quarter. However, additional requests are anticipated during the next reporting period. In addition, Installation Source Programs are being established at appropriate locations and may result in changes to ICIP operations if significant information is developed. These operations have been established at Forts Rucker, Sheridan, Polk, Sill, Sam Houston and McClellan.

2. (C) Much of the credit for the significant information developed can be attributed to the increased use of Conventional Sources to supplement the coverage provided by Confidential Sources. A large percentage of the sources mentioned as being under assessment in the inclosures will be initially recruited as Conventional Sources controlled by the Project Liaison Officers. When their training has progressed to the point where their reliability is established and their production becomes substantial, they can be transferred to confidential status under the control of Project Case Officers. This approach is expected to increase the quantity and quality of production in established operations. A monthly operational status report system was initiated during the quarter which will provide a continuing overview to insure that each operation is productive in relation to the manhours and funds expended and is not being continued merely for the sake of having an operation on the books.

3. (C) Difficulties are being experienced in the implementation of the approved operations at Sierra and Umatilla Army Depots. Their isolated locations require that a Project Liaison Officer be stationed at each. Two volunteer CWOs were found among the assets of the 115th MI Group, but OPO disapproved their contemplated assignment because both were nearing 20 years service and were not to be retained on duty. Emergency requisitions are at MI Branch, and a candidate for Sierra has been nominated

to arrive o/a 15 June 1974. The status of the Umatilla fill is not known. In the meantime, the MI presence is manifested by regular TDY visits to each installation. Individual inclosures were therefore not prepared on these installations.

4. (U) The inclosures on CANAL LOOP and LANDLESS TIME are submitted for the last time. These operations are being absorbed into GONDOLA STAR and CENTRAL TAXI as a result to Army reorganization. In the case of CANAL LOOP, administration and management will be simplified. At the end of the reporting period, there was a net gain of two for a total of 19 operations, including the Electronic Proving Ground, Fort Huachuca, which is pending approval. There are two known gains during the second quarter of CY 74, not including any operations which will be generated as a result of the proposed letter by the CG, US Army Communications Command - CONUS, which is addressed in the CANARY EFFORT inclosure.

1. (U) CANAL LOOP: (OACSI Approval - 16 Feb 72)

a. Location: Edgewood Arsenal, Edgewood, MD

b. Confidential Source Utilization: Five sources were utilized during the reporting period.

c. Information Obtained Off-post and/or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: Sources provided additional leads on b6 USAR officer, which will be utilized in the limited investigation now underway.

e. Operational Status: Three additional sources are under assessment, and emphasis was placed on increasing contact with official sources during the reporting period. A study of targets covered under this operation was made by the Installation Intelligence Officer, Aberdeen Proving Ground, the Chief of Security, Edgewood, and the Project Liaison Officer. It was agreed that all current targets have the highest priority under the ICIP. A reviewed OPLAN is being prepared to consolidate the operations at Edgewood and Aberdeen. This will relieve the administrative burden of reporting on two separate operations, and is logical since the two posts are considered as a single entity.

3. (U) CANARY EFFORT: (OACSI Approval - 16 Feb 72)

a. Location: Fort Ritchie, MD

b. Confidential Source Utilization: Three sources were used during the reporting period.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: Adverse suitability information was developed on a Military Police investigator and resulted in his relief from investigative duties and assignment to less sensitive duties. A request for an investigation was forwarded to USAINTC. Similar information was developed on a US Army Captain being considered for sensitive duties in the Alternate Joint Communications Center (AJCC). Prior to the submission of a request for investigation to USAINTC, the officer became involved with law enforcement agencies and, after counseling, offered to resign from the Army. Information on drug abuse related incidents involving 13 US Army personnel was developed, and passed to the ICIP Coordinator. This is a decrease in the number of incidents from the previous quarter, and the Post Commander and ICIP Coordinator credit the ICIP operation and increased liaison between the Project Liaison Officer and the Provost Marshal with contributing to the decrease. The CG and C/S of US Army Communications Command-CONUS were also given an ICIP briefing during the period. BG Redman advised that he had been made aware of the achievements of the ICIP at Fort Ritchie and was planning to request coverage of sensitive installations within his command. Additional details are contained in the attached Quarterly Progress Report (ANNEX A).

e. Operational Status: In addition to the Confidential Sources, contact was maintained with 18 casual and nine liaison sources during the period. The favorable attitude of the Commander and the ICIP Coordinator are reflected in attachment.

QUARTERLY PROGRESS REPORT NUMBER 2

Period January 1974 thru March 1974

"WARNING NOTICE: SENSITIVE SOURCES AND METHODS INVOLVED"

SUBJECT: Operation CANARY EFFORT (U)

1. (U) CIRCUMSTANCES:

a. On 25 February 1974, the US Army Intelligence Command (USAINTC) Internal Counterintelligence Program (ICIP) Briefing was presented to BG Albert Redman, Jr., Commander, US Army Communications Command - CONUS and Mr. Kenneth L. Alexander, DAC, GS-14, Chief of Staff, US Army Communications Command - CONUS, Fort Ritchie. The aforementioned briefing, presented by the Project Liaison Officer (PLO), Operation CANARY EFFORT, was enthusiastically received by BG Redman and Mr. Alexander. Both BG Redman and Mr. Alexander were knowledgeable that an ICIP was in effect at Fort Ritchie and indicated that the ICIP had received many laudable comments. BG Redman indicated a desire to have the ICIP program expanded to include sensitive installations within his command. The following personnel were in attendance at the aforementioned briefing:

BG Albert Redman, Jr., Commander, US Army Communications Command - CONUS, Fort Ritchie.

Mr. Kenneth L. Alexander, DAC, GS-14, Chief of Staff, US Army Communications Command - CONUS, Fort Ritchie.

Mr. Joseph J. Carroll, DAC, GS-14, Assistant Chief of Staff, Intelligence and Security, US Army Communications Command - CONUS and Headquarters, Fort Ritchie.

MAJ Robert L. Brooks, MI, Commander, Fort Ritchie Field Office, 109th Military Intelligence Group, Fort Ritchie.

b. A formal briefing, per se, was not presented during the reporting period of 15 October 1973 to 15 December 1973. The Quarterly Progress Briefing presented on 29 March 1974, included the aforementioned period as well as the period of January 1974 thru March 1974. The Quarterly Progress Briefing was presented on 29 March 1974 at the request of COL James A. Manning, Commander, Fort Ritchie, as COL Manning felt the briefing should be presented at the end of the reporting period

SUBJECT: Operation CANARY EFFORT (U) 29 March 1974

as opposed to 15 March 1974, as stipulated by existing USAINTC regulations. Although the formal briefing was presented on 29 March 1974, continual/constant liaison was maintained with appropriate individuals briefed on the ICIP prior to the formal briefing. The following briefed personnel were present on 29 March 1974, at which time the Quarterly Progress Briefing was presented:

COL James A. Manning, b6 Armor, Commander, Fort Ritchie.

COL Harold G. de Moya, b6 Infantry, Deputy Commander, Fort Ritchie.

LTC Arlyn R. Madsen, b6 Signal Corps, Director, Telecommunications Directorate, Fort Ritchie.

Mr. Joseph J. Carroll, DAC, GS-14, Assistant Chief of Staff, Intelligence and Security, US Army Communications Command - CONUS and Headquarters, Fort Ritchie. Mr. Carroll is the ICIP Coordinator, Operation CANARY EFFORT.

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

a. During reporting period, Spotting and Assessment for Confidential Sources with placement and access continued.

b. Daily liaison was maintained with the Assistant Chief of Staff, Intelligence and Security, US Army Communications Command - CONUS and Headquarters, Fort Ritchie and/or a briefed member of the aforementioned office.

c. Periodic, if not daily, liaison was maintained with 16 individuals assigned key positions within the Fort Ritchie military community. Aforementioned individuals, considered Casual/Official Sources, include the Director, Telecommunications Directorate, the Provost Marshal, Military Police Investigations, Company Commanders, and other appropriate personnel.

d. Periodic/continual liaison was maintained with appropriate federal, state and local agencies.

e. During reporting period a total of 31 Agent Reports were submitted concerning 19 individuals assigned to Fort Ritchie occupying either sensitive positions and/or having security clearances. The aforementioned Agent Reports forwarded adverse suitability information.

~~CONFIDENTIAL~~

ICGP-B-FR
SUBJECT: Operation CANARY EFFORT (U) 29 March 1974

f. On 4 January 1974, a draft letter was prepared for the Assistant Chief of Staff, Intelligence and Security, US Army Communications Command - CONUS and Headquarters, Fort Ritchie, to be used by the aforementioned individual/office in requesting expansion of the ICIP within the US Army Communications Command - CONUS. The aforementioned letter (draft) was well received and appropriate staffing was initiated. On 26 March 1974, COL Antonio Vega, GS, Assistant Chief of Staff, Intelligence and Security, US Army Communications Command, Fort Huachuca, Arizona, discussed proposed ICIP expansion with Mr. Carroll and indicated strong interest in the proposal. COL Vega reportedly informed Mr. Carroll that the letter from Fort Ritchie would be enthusiastically received at Fort Huachuca and that COL Vega would recommend that the request for ICIP expansion be approved and forwarded, in the form of a formal request, to the Office of the Assistant Chief of Staff for Intelligence, Department of the Army. Mr. Carroll indicated to undersigned PLO that the aforementioned letter would leave Fort Ritchie by 8 April 1974.

g. Upon termination of the Quarterly Progress Briefing, 29 March 1974, COL Manning and Mr. Carroll expressed their appreciation and enthusiasm for the ICIP at Fort Ritchie. Comments for accomplishments rendered during the reporting period were laudatory, to say the least. COL Manning indicated his desire to continue the ICIP at Fort Ritchie as he believed it's contribution toward enhancing the security posture of Fort Ritchie and the Alternate Joint Communications Center (AJCC) was invaluable. Both COL Manning and Mr. Carroll desired that the existing ICIP at Fort Ritchie continue "uninterrupted" despite any reorganizational changes anticipated by USAINTC. Mr. Carroll stated that he did not desire to see any personnel changes in as far as the PLO was concerned as he was "immensily satisfied" with the present PLO both professionally and personally. Mr. Carroll added, that for the first time since his assignment to Fort Ritchie in 1971, he was totally satisfied with the ICIP in it's entirety.

h. COL Manning and Mr. Carroll further expressed their appreciation of SAEDA briefings presented to a total of 583 personnel, both military and civilian, on 28 March 1974, by the PLO.

3. (U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED:

a. As previously stated, a total of 31 Agent Reports (DA Form 341) were submitted concerning 19 individuals, US Army personnel, assigned to the US Army Communications Command - CONUS and Fort Ritchie. Aforementioned Agent Reports, submitted by the PLO, forwarded adverse suitability information. Of the aforementioned 31 Agent Reports, a total of 15 Agent Reports were submitted concerning 13 US Army personnel involved in drug abuse related incidents. A total of 17 Agent Reports concerning five US Army personnel were submitted in regard to adverse suitability information.

~~CONFIDENTIAL~~

Page 1760 of 3957

~~CONFIDENTIAL~~

ICGP-B-FR
SUBJECT: Operation CANARY EFFORT (U) 29 March 1974

b. On 4 February 1974, PLO was notified of an alleged threat on the life of the Commander, 572d Military Police Company (Security), Fort Ritchie. The threat, in form of an alleged $10,000 "contract", was allegedly sponsored by either De Mau Mau or the Black Liberation Army. Contact was effected with appropriate military and civilian agencies and reported information was forwarded in form of a Spot Report as well as a follow-up Agent Report. Both COL Manning and Mr. Carroll expressed appreciation for the timely and effective manner in which the aforementioned incident was handled by the PLO.

c. In yet another case, adverse suitability information was surfaced concerning a former Military Police Investigator assigned to Fort Ritchie. The aforementioned individual was relieved of MPI duties and assigned less sensitive duties. Adverse suitability information was gleaned from official records and Official Sources and brought to the attention of Mr. Carroll. Mr. Carroll, in turn, requested an investigation of the individual from USAINTC.

d. In still another instance, adverse suitability information was surfaced concerning a US Army Captain who was being considered for a sensitive position both at Fort Ritchie and the AJCC. Adverse suitability information was gleaned from official records and Official Sources and brought to the attention of both COL Manning and Mr. Carroll. Prior to an investigation being requested by Mr. Carroll, the individual concerned again became involved with law enforcement agencies and, after counselling by COL Manning, offered to resign from the US Army. The aforementioned incident was particularly delicate as the individual concerned was a graduate of the US Military Academy and possessed a distinguished combat record in the Republic of Vietnam. COL Manning and Mr. Carroll both expressed complete satisfaction in the manner in which the PLO brought the adverse suitability information to their attention and concurred with PLO in recommendations offered.

e. While drug abuse, per se, is not within the investigative purview of USAINTC, the issue does involve suitability of the individuals concerned to hold security clearances and occupy sensitive positions. Upon recient of adverse information, immediate action was taken to notify the ICIP Coordinator, Operation CANARY EFFORT, Mr. Joseph J. Carroll; the Commander, Fort Ritchie; and the Director, Telecommunications Directorate, if applicable. In addition to the aforementioned, action was taken to disseminate information, criminal in nature, to the appropriate military and civilian authorities. COL Manning and Mr. Carroll both expressed satisfaction in the decrease of drug abuse related incidents during reporting period and voiced belief that the marked decrease was largely due to the enhanced liaison between the PLO and the Office of the Provost Marshal.

~~CONFIDENTIAL~~

ICGP-B-FR
SUBJECT: Operation CANARY EFFORT (U) 29 March 1974

f. Information concerning both military and civilian personnel assigned to US Army Communications Command - CONUS and Fort Ritchie, and on whom Agent Reports have been submitted, by both the PLO and Project Case Officer (PCO), are duly reflected in Monthly Status Reports (MSR) for the months of February and March 1974. Paragraphs 2.e. and 3.a. of this report contain statistics concerning Agents Reports submitted only by the PLO.

g. Covert Sources within the CANARY EFFORT target area continue to report adverse suitability information concerning both US Army and Department of the Army personnel assigned to Fort Ritchie and the AJCC.

4. (U) COMMENTS, REMARKS, AND RECOMMENDATIONS:

a. It is strongly recommended that, in the event personnel changes are anticipated in the forthcoming reorganization, appropriate and responsible USAINTC personnel effect contact with COL Manning and/or Mr. Carroll prior to initiating such changes. If nothing else, the aforementioned recommended action should be accomplished as a "matter of courtesy".

b. PLO and PCO continue to enjoy an excellent professional and personal working relationship. PLO and PCO indeed work and function as a team. PLO continues to enjoy an excellent professional and personal working relationship with his counterparts, liaison contacts, and Casual/ Official Sources.

c. It is envisioned that,once the Fort Ritchie Field Office increases it's personnel strength, and once the administrative requirements levied on the PLO either diminish or stabilize, the PLO will become increasingly effective/productive and be permitted to support the supported commander in the manner intented by the ICIP, i. e. in the "true spirit" of the program. The ultimate goal of the ICIP and, hence, the PLO, is to afford the Commander, Fort Ritchie, with coverage desired, i. e., enhancement of the security posture of Fort Ritchie and the AJCC by means not locally available the Commander.

8. (U) CENTAUR RACE: (OACSI Approval - 30 Jul 73)

a. Location: Ninth Infantry Division and Fort Lewis, WA

b. Confidential Source Utilization: None

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: A conventional source reported activity ~~by~~ on behalf the wife of SP4 b6 courtmartialed on 17 Jan 74 for illegal distribution of literature on post. (Agent Report attached at ANNEX A.) There were two instances of distribution of such literature on the post during the period reported on. The FBI continues to provide information on military personnel who engage in anti-military activity off-post.

e. Operational Status: b6 transferred to Leavenworth and then released from confinement and the service during the period, is allegedly returning to or already in Tacoma, WA. He is expected to continue his anti-military activities, but the FBI is in a position to provide continuing coverage. Both b6 and b6 are expected to assist b6 in his activities. Security officials at Fort Lewis indicate that this minor activity has no apparent affect on troop morale or efficiency. This is confirmed by contacts with 26 conventional sources during the period. Eighteen additional individuals are under assessment for use as either confidential or conventional sources. The civilian deputy to the G2 advised the CI Div, DCSI, FORSCOM, that he was pleased with what was being provided.

AGENT REPORT

For use of this form, see FM 30-17(C); AR 381-130; the proponent agency is the Office of the Assistant Chief of Staff for Intelligence.

1. NAME OF SUBJECT OR TITLE OF INCIDENT	2. DATE SUBMITTED
ANTI-MILITARY/DISSIDENT ACTIVITIES Company A, 3/39th Inf, 9th Inf Div Fort Lewis, Washington	31 January 1974
	3. CONTROL SYMBOL OR FILE NUMBER

4. REPORT OF FINDINGS

(CASUAL SOURCE) On 31 January 1974, PFC b6 Company A, 3/39th Infantry, 9th Infantry Division, Fort Lewis, Washington, was interviewed by the undersigned, at the Fort Lewis Field Office, 115th Military Intelligence Group, Fort Lewis, regarding SUBJECT, and stated substantially as follows:

Two of b6 's friends, PVT b6 and PFC b6 b6, both members of the 3/39th Infantry, collected approximately $175.00 from Source's platoon on 31 January 1974. The money was collected for b6 's wife. A substantial number of persons in Company A, 3/39th Infantry are highly disgruntled with the US Army for the stiff sentence b6 received as a result of his recent court-martial at Fort Lewis.

AGENT'S NOTES: b6, a former member of Company A, 3/39th Infantry, Fort Lewis, was given a Special Court-Martial on 16 January 1974, for the unauthorized distribution of literature at Fort Lewis, Washington.

9. (U) ~~(C)~~ CENTAUR SALE: (OACSI Approval - 14 Dec 73)

a. Location: US Army Mobility Equipment Research and Development Center, Ft Belvoir, VA

b. Confidential Source Utilization: Not applicable

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: Not applicable

d. Useful Information Obtained: SSG [b6], mentioned in the previous report, went AWOL and was dropped from the rolls as a deserter. He was not reported as a Knowledgeable AWOL. A contractor employee was caught taking unauthorized photographs on post. Examination of the developed photos indicated nothing of security interest, and MERDC authorities plan no further action.

e. Operational Status: The relationship with MERDC security officials continues to be excellent. The Project Liaison Officer (PLO) has been hampered by having to function in the same capacity at Harry Diamond Laboratories (HDL). However, he has identified 10 prospective sources and appropriate checks are being conducted. A separate PLO will be assigned to HDL and will allow the CENTAUR SALE PLO to function full-time.

a. Location: Harry Diamond Laboratories, Washington, DC

b. Confidential Source Utilization: Not applicable

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: Not applicable

d. Useful Information Obtained: Agent Reports on an Israeli-born employee which satisfy requirements in a USAINTC program concerning extremist threats against the Army.

e. Operational Status: This operation has been somewhat hampered by the reluctance of the Security Officer to cooperate with the Project Liaison Officer (PLO). The PLO has been also required to function in that capacity for CENTAUR SALE. A separate PLO for CENTAVO KID has been assigned and documented with a security badge. By working with the more receptive Assistant Security Officer, who is expected to take over from his chief when the latter retires this year, it is hoped that progress will be made. The staff in the Personnel Office cooperate fully, so that identification and selection of potential sources should begin shortly.

11. (U) CENTRAL TAXI: (OACSI Approval - 16 Feb 72)

a. Location: Headquarters, US Army Electronics Command, Ft Monmouth, NJ

b. Confidential Source Utilization: One additional source was recruited, bringing the total utilized to four.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None.

d. Useful Information Obtained:

(1) A civilian employee continues to drink to excess; the matter will be discussed with his supervisor by the ICIP Coordinator.

(2) Another employee is in contact with foreign export companies, but the fact that some are in the Soviet Bloc has heretofore been unknown to ECOM officials. The coordinator has asked that sources be tasked to provide additional details.

(3) A civilian guard detailed to control access to a sensitive area has been absent from his post, allowing personnel to come and go with identification not checked. He has been transferred to other duties.

(4) A GS 15 scientist discussed SECRET information in a GSA cafeteria while on TDY. He will be counseled on proper security procedures, since he will soon host a visiting Japanese student and may inadvertently release unauthorized information. (See ANNEX A)

e. Operational Status: In addition to the confidential sources listed above, nine conventional sources were used during the period, two of whom contributed information on the guard and the talkative scientist. ECOM staff members continue to express appreciation for the information surfaced by the operation. LTC Richard O. Aamot, Chief, Security Office, and ICIP Coordinator, has announced his intention of expressing in writing his appreciation to personnel involved in the ICIP for their contributions to the security of ECOM. Additional details are contained in attached Quarterly Progress Report.

DEPARTMENT OF THE ARMY
FORT MONMOUTH FIELD OFFICE
109TH MILITARY INTELLIGENCE GROUP
P. O. BOX 176, EATONTOWN, NEW JERSEY 07724

QUARTERLY PROGRESS REPORT NUMBER 16

Period: 10 December 1973 to 1 March 1974

WARNING NOTICE: SENSITIVE SOURCES AND METHODS INVOLVED — 7 MAR 1974

SUBJECT: CENTRAL TAXI (U)

1. (U) CIRCUMSTANCES:

On 4 March 1974, Quarterly Progress Report Number 16 was presented orally to LTC Richard O. Aamot, Chief, Security Office, US Army Electronics Command (ECOM), Fort Monmouth, New Jersey, in LTC Aamot's office; no others were present.

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

a. The prospective confidential source mentioned in Quarterly Progress Report Number 15 (IC-B-075) was recruited by the PCO on 10 January 1974. (See CR-001-109-MON, Subject: IC-B-075, dated 16 January 1974).

b. The name of the program has been changed from the Counterintelligence Screening Program (CISP) to the Internal Counterintelligence Program (ICIP).

c. Emphasis continues on spotting, assessing and recruiting conventional sources. During the reporting period, the PLO recruited six additional conventional sources. A total of nine conventional sources have been recruited since November 1973, when the new conventional source program was implemented. The PLO is in the process of spotting and assessing four new conventional sources.

d. The PLO has been alerted by DA that he will be transferred to USAREUR. Hopefully, a new PLO will be on station prior to the undersigned's departure.

3. (U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED:

a. On 9 January 1974, it was reported that Sherman Ray SHIELDS (see Quarterly Progress Report Number 15) continued to consume alcoholic beverages to excess. (CR-011-109-MON, Subject: IC-B-072, dated 15 January 1974).

b. On 9 January 1974, it was reported that b6 DAC, GS-12, b6 Electronics Devices Branch, Components Section, Production Engineering Division, Directorate of Research, Development and Engineering, ECOM, Fort Monmouth, New Jersey, was involved in foreign business transactions, to include transactions emanating from Soviet Bloc countries. (CR-011-109-MON, Subject: IC-B-072, dated 15 January 1974). Subsequent investigation re-

SCHEDULE OF EXECUTIVE ORDER 11652
AUTOMATICALLY DOWNGRADED AT TWO YEAR
INTERVALS; NOT AUTOMATICALLY DECLASSIFIED

vealed that b6 had indicated on HIS latest Statement of Personal History that HE was involved in foreign business transactions, but failed to note HIS dealings with Soviet Bloc countries. Noteworthy is the fact that HIS mother, father and spouse were all born in Poland.

c. On 1 March 1974, information was received that John Randolph DICKERSON, Sr., DAC, GS-4, b6 a US Government Security Guard employed by ECOM was not carrying out HIS duties in a proper manner. DICKERSON had been observed for over a two-year period at HIS normal post at the entrance/exits to the Hexagon cafeteria. During this period, DICKERSON, who was supposed to be checking personnel for proper identification and clearance, was seen sleeping, wiping tables, working in the kitchen and operating the cafeteria cash register. (Agent Reports prepared by Jerome A. Britton, 109th MI Group, regarding DICKERSON, dated 1 March 1974.)

d. On 1 March 1974, information was received that b6 DAC, GS-15, b6 Chief, Laser Technical Area, Combat Surveillance & Target Acquisition Laboratory (CSTA), ECOM, Fort Monmouth, New Jersey, had taken a TDY trip to the Washington, D.C. area during the past 30 days. While in the Washington area, b6 accompanied by several others, went to an AMC cafeteria and began discussing sensitive SECRET information. It is unknown if uncleared personnel were able to listen to b6 's conversation. (Agent Reports prepared by Special Agent Jerome A. Britton, 109th MI Group, regarding b6 , dated 1 March 1974).

e. Information regarding b6 (see Quarterly Progress Report Number 15) was passed to the Fort Monmouth Resident Agency, USACIDC, for possible exploitation.

4. (U) ~~(C)~~ COMMENTS, REMARKS AND RECOMMENDATIONS:

a. Reference paragraphs 2a and 2c above: LTC Aamot expressed deep satisfaction with CENTRAL TAXI's progress, and urged that personnel involved in the program continue their aggressiveness.

b. Reference paragraph 3a above: LTC Aamot will talk to SHIELDS' supervisor.

c. Reference paragraph 3b above: LTC Aamot requested additional information regarding b6 as it is developed. Aamot already has briefed the ECOM Chief of Staff on b6 and would be most appreciative if we can surface additional details.

d. Reference paragraph 3c above: LTC Aamot advised the PLO that DICKERSON will be relieved from HIS post and transferred to another position with decreased responsibilities.

275

REGRADED UNCLASSIFIED
ON SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH Para 1-603 DOD 5200.1R

CONFIDENTIAL

e. Reference paragraph 3d above: LTC Aamot contacted the Director of the CSTA Laboratory and informed him that b6 had been overheard discussing SECRET information in an unauthorized area. Aamot will confront b6 with the same information, without being specific so as not to compromise our source. The Agent Report on b6 could be of more importance than superficially indicated because b6 is sponsoring a Japanese exchange scientist who only is cleared for access to CONFIDENTIAL material, and b6 is capable of inadvertently passing SECRET data to the Japanese scientist. The verbal counseling by Aamot should negate such an eventuality and result in increased security awareness on b6 's part.

f. Reference paragraphs 2c and 3c and 3d above: The Agent Reports on b6 b6 and DICKERSON were especially significant because they represent the first reporting by conventional sources since implementation of the conventional source program in November 1973. This data was obtained on just the second contact with the sources and indicates a very promising future for the overall program.

g. CENTRAL TAXI target coverage is presently as follows:

(1) Research, Development and Engineering Directorate: Confidential Sources IC-B-072 and IC-B-073.

(2) Directorate of Product Assurance: Confidential Source IC-B-074.

(3) Maintenance Directorate: Conventional Sources b7(d) and b7(d)

(4) Combat Surveillance and Target Acquisition Laboratory: Confidential Source IC-B-075 and Conventional Source b7(d).

(5) Electronics Technology and Devices Laboratory: Conventional Source b7(d)

(6) Electronic Warfare Laboratory: Conventional Sources b7(d), b7(d) and b7(d).

(7) Research and Development Technical Support Activity: Conventional Source b7(d).

(8) Directorate of Management Information Systems: Confidential Source IC-B-058, upon his transfer from ECOM/Philadelphia to Fort Monmouth.

(9) Communications/Automatic Data Processing Laboratory: Conventional Source b7(d).

h. Future plans relative to new target areas are to recruit sources in the following ECOM activities which are presently void of source coverage: Avionics Laboratory; Directorate of Procurement and Production; Directorate of Materiel Management, upon its relocation from Philadelphia to Fort Monmouth; Comptroller; and Directorate of Plans, Training and Force Development.

i. A total of 11 CENTRAL TAXI Agent Reports, consisting of 19 leads were prepared by the PCO and PLO during the reporting period.

12. (U) ~~(C)~~ CENTURY SQUAD: (OACSI Approval - 3 Oct 73)

a. Location: US Army Management Systems Support Agency, The Pentagon

b. Confidential Source Utilization: One source was recruited during the period.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: None

e. Operational Status: The source is still in the training phase, but can be expected to begin satisfying EEI during the next reporting period. Twenty-one prospective sources have been subjected to file reviews, LACs, NACs and assessment, and can be activated as required. The Director and the Security Manager continue to provide the cooperation necessary in the development of this operation. During the quarterly briefing, the Director stated that sensitive information discussed in his office was becoming common knowledge within the agency and felt that this information was either released by someone without authorization or that his office was technically monitored. He requested that a technical inspection of his office be provided, and was assured that an inspection would be conducted in the near future. A complete inspection was completed on 5 Apr 74 with negative results.

b. Confidential Source Utilization: Two sources were used during the reporting period.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: Investigative data on potential sources.

e. Operational Status: A review of installation targets indicates that the highest priority should be given the Ballistics Research Laboratory (BRL). One of the above sources is assigned to BRL, and three conventional sources are now under assessment to expand the coverage. Two additional conventional sources are under assessment in other target activities. The Project Liaison Officer has been assisting in preparation of the Sensitive Activity Vulnerability Estimate (SAVE) at Aberdeen since February. This has given him an opportunity to make additional useful contacts and identify areas such as BRL which need additional source coverage.

(U)

14. ~~(C)~~ GONG SILK: (OACSI Approval - 16 Feb 72)

a. Location: Picatinny Arsenal, Dover, NJ

b. Confidential Source Utilization: One source was terminated during the period, leaving a total of two.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: As a result of information provided by a source, the Commander and Security Officer were made aware of excessive absenteeism by a GS 11 Engineer. The employee's absence and irrational behavior were known to the Civilian Personnel Office but not staffed. As a result, procedures have been changed so that such information will be reported to the Security Officer. Another engineer, a GS 12, allegedly takes bets from fellow employees in excess of $100 and "lays them off" with unidentified individuals off-post. Another engineer, a GS 11, is offering photographic equipment for sale to fellow employees at about 60% of cost, most of it admittedly "hot." This information, which could conceivably be exploited by HOIS came to the source as a target of opportunity. The ICIP Coordinator has requested further information be developed before requests for investigation are submitted to USAINTC.

e. Operational Status: Eleven of the 12 potential conventional sources mentioned in the previous quarterly report have been contacted, and 10 were amenable to recruitment. The 11th was agreeable, but did not consider that he had the proper placement. He identified the building in his directorate which was the location of the most sensitive activities, and recommended two individuals as possible sources. He has been briefed on the necessity of remaining silent about the operation. The Project Liaison Officer has been requested to assist in future SAEDA lectures, and expects to acquire additional potential sources from among the "walk-ins" who normally surface after such lectures. The Commander has taken an interest in the operation and requested the expanded coverage which will be provided by the use of conventional sources. Termination of the source was necessitated because of a RIF which reduced him from a GS 11 to a GS 7, affecting his production as a source. He was also transferred to a less sensitive area, ending his placement.

a. Location: Philadelphia Facility, US Army Electronics Command

b. Confidential Source Utilization: One source was contacted during the reporting period.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: None.

e. Operational Status: The source was met in New Jersey and stated that he was to be officially transferred to Ft Monmouth on 11 Mar. From a practical standpoint, this signifies the demise of LANDLESS TIME. A revised CENTRAL TAXI OPLAN will include the functions transferred from Philadelphia to Ft Monmouth, and will identify the Management Information Services Branch, to which this source is assigned, as a target area. This source will be carried during the next reporting period under CENTRAL TAXI.

b. Confidential Source Utilization: Four sources used during the reporting period.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: The limited investigation on the captain displaying unexplained affluence is not yet complete. A Hungarian-born NCO was identified as not having completely accounted for foreign visits and relatives. The requested investigation has been completed and is being returned to AWC. The questionable areas appear to have been satisfactorily resolved.

e. Operational Status: The CG, AWC continues to express his complete satisfaction with the operation. Conventional Sources continue to provide information to supplement that provided by the Confidential Sources. The new Deputy CG was briefed during the period and expressed reservations concerning the operation. It can only be hoped that the Commandant's enthusiasm for the operation will serve to overcome this attitude.

b. Confidential Source Utilization: Four sources were utilized during the period.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None

d. Useful Information Obtained: Another incident involving pen-pals in Czechoslovakia was surfaced, although it took place during the summer of 1973. It involved unidentified ethnic Czechs at the SOKOL Hall in San Mateo, CA and two unidentified WAC members of the Army Security Agency who graduated in Sep 73. ODCSI, USAREUR has been requested to pass this information to ASA security authorities in USAREUR and provide the identity of the perpetrators and the names of the Czech pen-pals. Five individuals involved in the illegal use of drugs were identified and appropriate notifications made. One of these was alleged to have admitted using heroin.

e. Operational Status: The Commandant, Defense Language Institute, was present for the quarterly briefing and was extremely receptive to the program. He expects to move his staff to the West Coast by Sep 74. There are 11 conventional sources employed, and eight additional students have been identified as probable confidential sources. Both the Commandant and Security Officer have expressed appreciation for the enhancement of the installation's security posture as a result of the ICIP and attendant CI support.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) Operations

OFFICE SYMBOL: DAMI-DOI-S

SUSPENSE:

DATE: 28 January 1974

ACTION REQUIRED: To obtain approval of the quarterly ICIP report.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. BACKGROUND:

a. By memorandum dated 8 February 1972 (YELLOW TAB B) the Under Secretary of the Army requested the Vice Chief of Staff (VCSA), US Army, provide quarterly reports on all (ICIP) operations.

b. This is the seventh such quarterly report.

c. USAINTC input is at YELLOW TAB C.

2. DISCUSSION:

a. At the direction of the VCSA, 2 November 1973, the term Internal Counterintelligence Program (ICIP) replaced the term Aggressive Counterintelligence Program, (ACIP).

b. YELLOW TAB A forwards to the VCSA the ICIP Quarterly Report ending 31 December 1973 for the Under Secretary of the Army.

3. RECOMMENDATION: That the memorandum to the VCSA at YELLOW TAB A be approved and signed.

MEMORANDUM FOR: UNDER SECRETARY OF THE ARMY

SUBJECT: Internal Counterintelligence Program (ICIP) Operations (U)

1. (U) Reference is made to memorandum, Under Secretary of the Army, dated 8 February 1972, subject as above.

2. (U) The eleven Internal Counterintelligence Program (ICIP) operations reported by memorandum to you last quarter remain active. Six new operations submitted during the last quarter have been reviewed at DA and approved for implementation. The report of current operations for the quarter ending 31 December 1973 is attached.

3. (U) The primary value of ICIP operations is in their potential for early warning and detecting internal security weaknesses and security threats to the supported command. Inasmuch as these operations are a form of intensified security watchfulness, negative reports in themselves are frequently of value to a commander in planning for security requirements of a given installation or activity.

CURRENT ICIP OPERATIONS (cont)

LOCATION	ICIP NICKNAME	DATE APPROVED	NUMBER CONFIDENTIAL SOURCES
Defense Language Institute Washington, DC	LANYARD MOOD	22 Dec 71	0
Army War College, Carlisle Barracks, Pennsylvania	LENIENT CLOUD	16 Feb 72	4
Defense Language Institute Presidio of Monterey, California	LENTIL MONKEY	26 Oct 71	4
TOTALS 17	17		25

Off-post Information: There were no instances in which information on non-affiliated civilians was collected off post.

Information Obtained:

a. During the second quarter FY 74 the ICIP operations have received increased emphasis from the Intelligence Command and the supported commanders. The 17 operations, six of which are newly implemented, have been received with enthusiasm from the supported commands. None of the operations during this quarter indicated the existance of a hostile threat.

b. Approximately 30 reports emanating from the ongoing operations and passed to the supported commanders concern personnel suitability and incidents.

Continuance of Operations: The 17 ICIP operations are being continued for their original stated purpose.

DEPARTMENT OF THE ARMY
HEADQUARTERS
U. S. ARMY INTELLIGENCE COMMAND
FORT MEADE, MARYLAND 20755

9 JAN 1974

ICDO-OP

SUBJECT: Quarterly Reporting of Internal Counterintelligence Program (ICIP) Operations (U)

HQDA (DAMI-DOI-S)
WASH DC 20310

1. (U) There has been positive improvement in the Internal Counterintelligence Program (ICIP) during the second quarter FY 1974. The positive improvement has resulted from Command emphasis placed on making the individual operations viable and productive. The briefings conducted by the Intelligence Command and the Group Commanders' visits have contributed immeasurably to understanding, acceptance and cooperation in the ICIP by the supported Commanders and their staffs. With this impetus and assignment of aggressive Project Liaison and Contact Officers, the operations are beginning to produce the counterintelligence information that meet and satisfy the objectives of this program. Criminal and security information gleaned as an adjunct of the program activity have been furnished the appropriate Army authorities for their action.

2. (U) During the reporting period, there have been six additional ICIP operations approved of which three were implemented and the other three are scheduled for implementation during January 1974. This brings the total number of operations to 17 for the program.

3. (U) In addition to Quarterly Status report, Progress Reports are inclosed for in depth information concerning the individual operations. These reports not only reflect the progress accomplished during the reporting period, but the positive attitude that now prevails at all levels.

b. Confidential Source Utilization: Three Confidential Sources were utilized during the reporting period. Additionally, one Conventional Source has been coded and was utilized during the reporting period.

c. Information Obtained Off-post and/or Reported on Non-affiliated Civilians: None.

d. Useful Information Obtained: Twenty-two Agent Reports were submitted pertaining to incidents and adverse suitability information regarding US Army personnel assigned to the US Army Communications Command - CONUS and Fort Ritchie. Several individuals were identified as being involved in drug abuse or drug abuse incidents. Appropriate Fort Ritchie staff personnel and CID were notified. Activities of these individuals will be monitored for development of specific suitability information, since the majority have access to the Alternate Joint Communications Center. A senior NCO assigned to communications was identified as being in debt.

e. Operational Status: An experienced Project Liaison Officer was assigned the operation on 15 October 1973 and is now well established. The Fort Ritchie commander expressed his gratitude at the accomplishments rendered during the reporting period. The Commanding General, US Army Communications Command - CONUS has expressed his desire that the operation continue in effect to enhance the security of his command.

ICGP-B-SP
SUBJECT: Quarterly Progress Reports (QPR) and Quarterly Status Reports (QSR)

Officer (PLO) is on station and the new Project Control Officer (PCO) has reactivated seven dormant sources. This Group will recommend combining these two operations in view of organizational changes in the mission and functions of Edgewood Arsenal and Aberdeen Proving Ground.

b. CANINE PLATE (U): During the reporting period, formal approval of the Operation Plan (OPlan) was received from the Office of the Assistant Chief of Staff, Intelligence (OACSI), Department of the Army, and the Commander, Seneca Army Depot was briefed. A PLO is assigned and the program is being implemented based on ground work previously initiated.

c. CENTAVO KID (U): During the reporting period OACSI approval of the OPlan was received and the Commander, Harry Diamond Laboratory was briefed regarding the project. A PLO has been assigned and the program has been implemented. Sources are under consideration.

d. CENTRAL TAXI (U) and LANDLESS TIME (U): The CENTRAL TAXI (U) OPlan is under revision and should be combined with LANDLESS TIME (U). This action is recommended in view of the deactivation next year of the Electronics Command, Philadelphia (ECOM/P) and transfer of its functions to Fort Monmouth (ECOM/M). As a result of the on-going drawdown, transfer of functions and necessary termination of all but the one Confidential Source who is moving to Fort Monmouth, no QPR or QSR will be submitted for Operation LANDLESS TIME (U).

e. GONG SILK (U): The newly assigned GREAT SKILL (U) PCO has reactivated the three dormant Confidential Sources and broadened his base.

f. LANYARD MOOD (U): ICIP Support to the Defense Language Institute, East Coast (DLIEC) has a new PLO designated, and the revised OPlan submitted to your headquarters for approval.

g. CENTAUR SALE (U): OACSI approval of the OPlan was received on 14 December 1973. The Commander, Mobility Equipment Research and Development Center (MERDC) elected to be briefed in January 1974. A PLO has been designated and is presently active in the overt aspects of the program.

h. CANARY EFFORT (U): The project in support of USACOM-CONUS and Fort Ritchie is the best example of what the ICIP can accomplish when aggressively pursued by all personnel involved. Specific attention is invited to the CANARY EFFORT (U) QPR and QSR. I have directed that CANARY EFFORT (U) serve as the pilot operation for all ICIP operations conducted by the 109th MI Group. A new PLO has been recently assigned.

Page 1807 of 3957

ICGP-B-SP
SUBJECT: Quarterly Progress Reports (QPR) and Quarterly Status Reports (QSR)

i. LENIENT CLOUD (U): The Military History Research Collection (MHRC), at the request of the Commandant, US Army War College (USAWC) has been added to the LENIENT CLOUD (U) Target List. Information developed by the PLO has led to the initiation of background investigations concerning two individuals assigned to USAWC. Two Conventional Sources have been coded during the reporting period.

3. (U) The following items constitute group-wide accomplishments which have significantly improved all aspects of the ICIP:

a. Operational control of the ICIP has been returned to Field Office control and energized there. A Special Operations Letter of Instruction (LOI) has been published which will constitute 109th MI Group policy and procedures regarding the ICIP. I have placed great Command Interest throughout the quarter on the program and stressed the importance of the ICIP during the recent 109th MI Group Commanders' Conference. I will continue to emphasize this program during my periodic visits to all subordinate elements. Additionally, I have personally briefed a number of commanders of supported activities and their security managers concerning ICIP. This quarter we have placed first priority on the ICIP program and results have been satisfactory. More will be accomplished.

b. Action has been taken to fully coordinate the provisions of existing ICIP OPlans with the provisions of USAINTC and 109th MI Group OPlans 109-73, 110-73, and 111-73. Simultaneously, all ICIP OPlans will be revised and updated on a programmed basis. The object is to better our product and expand our base.

c. My staff has worked closely with your Special Operations personnel in the formulation of an ICIP Monthly Operational Status Report which is designed to update and replace the QSR and QPR.

d. GREAT SKILL (U) Personnel have been assigned and are operationally active as PCOs. All dormant Confidential Sources have been reactivated and are being retrained and redirected in line with increased standards of professionalism. More sources are being considered.

e. A Conventional Source Program is being developed to augment and support existing Confidential Sources.

f. Guidance has been formulated and disseminated directing subordinate commanders to evaluate supported installations and activities for potential ICIP implementation.

SUBJECT: OPERATION LENIENT CLOUD (U)

1. (U) CIRCUMSTANCES: At 0900, 18 December 1973, Major Franklin M. Davis, Jr., Commandant, US Army War College, (USAWC), Carlisle Barracks, PA, 17013, received the quarterly briefing concerning significant items of interest within the target areas defined by Installation Counterintelligence Program (ICIP), LENIENT CLOUD, from Special Agent John A. Nolan III, Project Liaison Officer, (PLO). No other persons were present during the briefing.

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

a. Operational and administrative control of ICIP LENIENT CLOUD was placed in Field Office Commander, (FOC), Fort Ritchie Field Office (FRFO), 109th MI Group.

(1) Such operational control caused PLO to be responsible for the conduct of SAEDA Briefings. Two SAEDA briefings were presented to a total of 560 military and civilian personnel on the installation on 1 November 1973. Presentation of such briefings allowed greater exposure of PLO to military and civilian personnel as a representative of USAINTC; allowed PLO to include himself among those persons continuously present on the installation capable of resolution of security related problems; and greatly enhanced PLO's accessibility to records and personnel on the installation and vise versa.

(2) On 24 October 1973, MAJ Robert L. Brooks, FOC, FRFO, visited Carlisle Barracks for an orientation, which included meetings with the Directors, and tours, of Strategic Studies Institute, Operations Group, Military History Research Collection (MHRC), USAWC Library, USAWC itself and USACC-C facility, Carlisle Barracks.

(3) On 11 December 1973, COL Charles E. Thomann, Commanding Officer, 109th MI Group, accompanied by MAJ Brooks, visited Carlisle Barracks for an orientation and in addition to an office call on General Davis, received a tour through those facilities in paragraph 2a(2) above, with the exception of MHRC.

(4) As a result of the visit by COL Thomann and MAJ Brooks, a comprehensive paper is presently being prepared with a view toward reducing the administrative

~~CONFIDENTIAL~~

CONFIDENTIAL

time, especially in regard to security clearance procedures, involved in hiring of civilian professors and consultants at Strategic Studies Institute, possibly through USAINTC assets.

(5) An additional result of the visits by COL Thomann and MAJ Brooks was an appreciation of the physical plant, the functions and the key personnel of target areas defined within ICIP LENIENT CLOUD.

b. In response to General Davis' request of 23 October 1973, approval was sought for the addition of MHRC to the target list of those organizations and facilities covered by Project LENIENT CLOUD.

(1) On 14 November 1973, approval was granted by letter from Commanding Officer, USAINTC, to add MHRC to the target list.

(2) Since 1 April 1973, target operational research for operational data relative to MHRC has been conducted and has thus far resulted in the submission of two Agent Reports detailing security procedures in effect at MHRC and two Agent Reports concerning persons assigned to MHRC.

(3) Spotting and assessment of potential assets has not thus far resulted in the submission of any formal, comprehensive Lead and Development Reports; however, daily to weekly contact has been established with three individuals presently identified as casual sources, within MHRC.

(4) As a result of contact with casual sources within MHRC, a formal written request for counterintelligence technical services was submitted to HQ, 902nd MI Group and subsequently completed by elements of the AJCC Field Office, 902nd MI Group, Fort Ritchie, MD. The services resulted in an appreciation on the part of MHRC administrative personnel of the benefits which accrue to the facility by such technical services. By virtue of the established reluctance on the part of COL George S. Pappas as regards the need for counterintelligence services, the basis for request of the services primarily concerned the safeguarding of valuable manuscripts, weapons, uniforms and other exhibits maintained in MHRC. At this point in time, such emphasis establishes, in the mind of the Director, a compatability between academic and historical prespectives and counterintelligence services.

c. During the reporting period, in-depth spotting and assessment potential assets for utilization, has resulted in submission of seven Lead and Development Reports.

d. To date, a total of twenty-nine casual sources, with whom daily to weekly contact had been maintained, have been utilized. As a result of utilization, two casual sources have been coded as Source 9002 and Source 9003.

e. Establishment of the PLO as a quasi-officially assigned assistant to the USAWC Security Manager, and who has a capability of providing a liaison conduit to USAINTC as an adjunct to such duties, has resulted in:

312

CONFIDENTIAL

~~CONFIDENTIAL~~

(1) Casual and conventional sources providing information which they would normally not have occasion to report officially due to periodically vagarious requirements of military administrative procedures.

(2) Causing the PLO to be queried relative to organizations with which members of the USAWC Staff and Faculty deal. Such queries have resulted in very rapid resolution of requests for characterization, in two cases, through CPT B. A. Oullette, Special Investigations Branch, 109th MI Group, and establishment of the PLO, in the view of the Staff and Faculty members, as a viable contact for intelligence related matters.

(3) Causing requests for all classified and unclassified military information to be routinely channelled through the USAWC Security Office, as opposed to the previous "hit or miss" manner in which each department of USAWC validated the requestor's authenticity. Further results include an established procedure whereby the List of Collectors of Unclassified Military Information (LHCUMI) is reviewed and has caused the submission of three letters to the appropriate agency at ACSI, when organizations/individuals have appeared in the LHCUMI document.

3. (U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED:

a. As a result of contact with a casual source in the administrative section of MHRC, a request for a background investigation of SGT b6 b6 MHRC has been submitted, through USAINTC channels, and is being conducted by PLO. Estimated date of completion of the initial portion of the investigation is 5 January 1974, dependent upon availability of sources who may be able to resolve derogatory information which has arisen.

b. As a result of inquiries by PLO, contact with conventional and casual sources on the installation, and in concert with information developed through confidential sources, a request for another investigation into the financial and moral background of CPT b6, assigned to Department of Command and Management, USAWC, has been initiated to be resolved by USAINTC elements. To date one Agent Report has been submitted to SIB, 109th MI Group, for forwarding to USAINTC, as background, prior to the submission of the request for investigation through the Deputy for Plans, Training and Security, Carlisle Barracks.

c. As a result of information supplied by casual sources, PLO is currently attempting to ascertain the true identity and purpose of a Mr. fnu b6, who has been "gate-crashing" parties and other social affairs at Carlisle Barracks, at which times he wears either a social or military name-tag. Local agency checks on Carlisle Barracks reveal that no individual by the name of b6 is assigned or employed at the installation.

d. An individual, subsequently coded, volunteered information in interview and sworn statement, relative to narcotics availability and use on Carlisle Barracks, as background information relative to the operation of

UNCLASSIFIED
SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH Para 1-603 DOD 5200.1R

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

the installation, and which contained allegations relative to an individual assigned to Carlisle Barracks in possession of a TOP SECRET security clearance. To date, nine Agent Reports, Subject: Availability and use of Narcotics on Carlisle Barracks, PA 1973 and a Memorandum for the Record, Subject: Information and Circumstances Relative to Drugs on Carlisle Barracks, have been submitted.

4. (U) COMMENTS, REMARKS AND RECOMMENDATIONS:

a. General Davis commented that he appreciated the presence of a full time PLO, whose integration into both the official and social functioning of the installation has been such as to provide much more effective coverage than had previously been experienced. General Davis queried PLO relative to the PLO serving as the Security Manager, USAWC during the impending leave of the Security Manager during the latter two weeks in January 1974, and was assured that the PLO would so serve, without any substantial reduction in coverage. Further, the assumption of the Security Manager's duties for two weeks could only serve to cement the acceptability of the PLO as the assistant to the Security Manager.

b. General Davis was receptive to the PLO's suggestion that a consideration be given for a formal request for a penetration test of the USAWC, subsequent to the full implementation of additional security safeguards presently being substituted for systems previously determined to be inadequate. Formal request will probably be forthcoming in late January, 1974, when construction is completed.

c. General Davis was also receptive to a recommendation that consideration be given for up-grading the security posture of Root Hall, which houses USAWC, in respect to limiting access to the building and effectively reducing the threat posed by a stay-behind.

FORT ORD, CALIFORNIA 93941

ICGP-F-OR

11 December 1973

QUARTERLY PROGRESS REPORT NUMBER 4

For the Period 1 October to 31 December 1973

WARNING NOTICE - SENSITIVE SOURCES AND METHODS INVOLVED

SUBJECT: Operation LENTIL MONKEY (U)

1. (U) CIRCUMSTANCES:

a. At 1030 hours on 4 December 1973, a briefing on the progress of LENTIL MONKEY was conducted at the Fort Ord Field Office, 115th Military Intelligence Group, Fort Ord, California. Attending were:

Colonel Eric H. Vieler, Commander, 115th Military Intelligence Group
Major James H. Donnelly, Commander, Fort Ord Field Office
CW2 James E. McKinley, Project Liaison Officer, LENTIL MONKEY

b. Between 1430 and 1500 hours, 4 December, a similar briefing was held in the office of the Commandant, Defense Language Institute, West Coast (DLIWC), Presidio of Monterey, California. Persons present were:

Colonel John F. Hook, Commandant, DLIWC
Colonel Eric H. Vieler
Major Richard Erickson, Security Officer, DLIWC
Major James H. Donnelly
CW2 James E. McKinley

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

a. The On-Post Liaison Operation: A total of 80 students, who were Class and Section Monitors, received individual SAEDA briefings in this operation. Included in this total were four monitors who received second briefings, and five who received third briefings. Intelligence-trained students were also contacted and reminded of their professional responsibility to report anything of intelligence interest.

b. The Conventional Source Operation:

(1) At the start of the quarter this operation had 20 prospective sources. Eight more were selected during this period, giving the operation

CONFIDENTIAL

~~CONFIDENTIAL~~

ICGF-F-OR 11 December 1973
SUBJECT: Operation LENTIL MONKEY (U)

a total of 28 prospective sources. Information produced by this operation exceeded that of any previous quarter since the project was reactivated in November 1971.

(2) Colonel Hook and Major Erickson were not briefed on the following:

(a) During the reporting period the Lead Bank was expanded from 42 to 68 MI students. Twelve new Leads were selected as prospective Conventional Sources; however, four were later dropped because of academic difficulties with the language being studied.

(b) On 24 October 1973, this operation acquired a prospective source who is a DA civilian employee of the Systems Development Agency, Defense Language Institute, Presidio of Monterey. This individual was formerly Confidential Source IC-D-310 of the 112th Military Intelligence Group.

c. The Confidential Source Operation: When the quarter began, this operation had eight prospective sources. One was recruited on 11 October 1973, four are still under assessment, and three have been dropped as unsuitable. Seven additional leads are presently being screened for possible development as sources. Colonel Hook and Major Erickson were not briefed on the following:

(1) Lead and Development Reports have been forwarded for four prospective sources. Recruitment of one of these sources is awaiting Headquarters, USAINTC approval of the approach plan.

(2) The seven new Leads were selected to cover the Chinese (1), Czech (1), Hungarian (1), Polish (1), Russian (2), and Japanese (1). languages.

3. (U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED:

a. Information was developed concerning the visit of a DLIWC Czech class to the Europa Restaurant, 2769 Lombard Street, San Francisco, CA, on 2 and 9 November 1973. A Confidential Source reported in May 1973 that the owner of this restaurant had encouraged Czech language students to establish "pen-pal" correspondence with three young females in Czechoslovakia. The class visited the restaurant as scheduled, but no further attempts to recruit "pen-pals" were noted.

b. A student reported that members of his Russian language class proposed a class visit of the Russian Consulate in San Francisco. Since the trip was not being planned for the immediate future, nothing further developed concerning this proposal.

SUBJECT: Operation LENTIL MONKEY (U)

11 December 1973

c. Confidential Source IC-F-081 reported on Czechoslovakian publications available to his class which contained Communist propaganda.

d. A student provided a copy of a booklet published by the Central Committee for Conscientious Objectors, which he had received in the mail. Numerous copies of this same booklet have been received by military personnel at Fort Ord.

4. (U) COMMENTS, REMARKS, AND RECOMMENDATIONS: The briefing ended with no questions by the attending parties. Colonel Hook expressed his appreciation for the effort expended in the conduct of the Internal Counterintelligence Program, and was very pleased with the progress that had been made.

QUARTERLY PROGRESS REPORT NUMBER ____

Period 15 October 1973 to 15 December 1973

~~WARNING NOTICE: SENSITIVE SOURCES AND METHODS INVOLVED~~

SUBJECT: Operation CANARY EFFORT (U)

1. (U) CIRCUMSTANCES:

a. Although a formal briefing per se has not been presented during reporting period, continual liaison has been effected and maintained with individuals briefed on the Counterintelligence Screening Program (CISP), Operation CANARY EFFORT, at Fort Ritchie. Continual/constant liaison has been effected and maintained with the following briefed individuals:

COL James A. Manning, b6 Armor, Commander, Fort Ritchie.

COL Daniel T. Larkin, b6 MPC, Deputy Commander, Fort Ritchie and Deputy Chief of Staff, Intelligence and Security, US Army Communications Command - CONUS and Fort Ritchie.

LTC Arlyn R. Madsen, b6 SC, Director, Telecommunications, Fort Ritchie.

CW4 Earl K. Osborne, b6 USA, COMSEC Officer, US Army Communications Command - CONUS and Fort Ritchie.

Mr. Joseph J. Carroll, DAC, GS-13, b6 Deputy Assistant Chief of Staff, Intelligence and Security, US Army Communications Command - CONUS and Fort Ritchie. Carroll is presently the CANARY EFFORT CISP Coordinator, Fort Ritchie.

Mr. Charles H. Koontz, DAC, GS-12, b6 Chief, Security Division, Deputy Chief of Staff, Intelligence and Security, US Army Communications Command - CONUS and Fort Ritchie.

Mr. William A. Kent, DAC, GS-11, b6 Chief, Intelligence Division, Deputy Chief of Staff, Intelligence and Security, US Army Communications Command - CONUS and Fort Ritchie.

b. On 19 November 1973, COL Charles E. Thomann, Commander, 109th Military Intelligence Group and LTC Leland J. Holland, Deputy Commander, 109th Military Intelligence Group, visited Fort Ritchie and effected personal contact with BG Albert Redman, Jr., b6 Commander, US Army Communications Command - CONUS, Fort Ritchie. BG Redman acknowledged that he was aware of the existence of a CISP at Fort Ritchie. BG Redman

SUBJECT: Operation CANARY EFFORT (U) 15 December 1973

further indicated a general knowledge of the aforementioned program as sponsored/directed by the US Army Intelligence Command (USAINTC). Undersigned Project Liaison Officer (PLO) was tasked with presenting an approximate ten minute informal briefing of the CISP in general.

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

a. CW4 Gary L. Peisen was assigned as the PLO for Fort Ritchie on 10 October 1973 and became operational on 15 October 1973. Introduction to essential personnel was effected without difficulty and no apparant operational difficulties are foreseen. Four key personnel at Fort Ritchie were briefed on the CISP and executed required Security Oaths. Formerly briefed individuals with no placement and access due to assignment changes were debriefed and executed required Debriefing Statements. Overt liaison contacts were initiated and maintained with both military and appropriate civilian agencies and individuals during the reporting period. COL Manning, Commander, Fort Ritchie, expressed a keen interest in the CISP at Fort Ritchie and projected a sense of gratitude for accomplishments rendered during the reporting period. COL Manning further stated that he had every intention of continuing the CISP at Fort Ritchie as he believed it's contribution to enhancing the security posture of Fort Ritchie and the Alternate Joint Communications Center (AJCC), Site "R", was invaluable.

b. During reporting period a total of 22 Agent Reports (DA Form 341) were submitted by PLO pertaining to incidents and adverse suitability information concerning US Army personnel assigned to the US Army Communications Command - CONUS and Fort Ritchie. The majority of the aforementioned Agent Reports cited US Army personnel having access to the AJCC, Site "R", Fort Ritchie.

c. During reporting period Conventional Sources were vetted and provided reportable information concerning adverse suitability information regarding US Army personnel assigned to sensitive duties at Fort Ritchie. One Conventional Source was assigned a Key Sheet Identification Code and provided reportable information.

d. Spotting and Assessment for Confidential Sources with placement and access continues.

3. (U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED:

a. As previously stated, a total of 22 Agent Reports (DA Form 341) were submitted by PLO pertaining to incidents and adverse suitability information concerning US Army personnel assigned to the US Army Communications Command - CONUS and Fort Ritchie. The majority of the aforementioned reports concerned US Army personnel, assigned to sensitive positions at Fort Ritchie, allegedly involved in drug abuse or drug abuse incidents. While drug abuse per se is not within the investigative purview of USAINTC

Page 1818 of 3957

ICGP-B-FR
SUBJECT: Operation CANARY EFFORT (U) 15 December 1973

the issue does involve suitabliity of the individuals concerned to hold security clearances and occupy sensitive positions. Upon receipt of the aforementioned adverse information, immediate action was taken to notify the CANARY EFFORT CISP Coordinator, the Commander, Fort Ritchie, and the Director, Telecommunications, if applicable. In addition to the aforementioned, action was initiated to disseminate information criminal in nature to the appropriate military and civilian authorities. In one case, liaison with a Conventional Source, disclosed that a member of the US Army assigned to Fort Ritchie, was experiencing adverse financial difficulties. Aforementioned information was brought to the attention of the CANARY EFFORT CISP Coordinator and resulted in serviced command having requested a Suitability Investigation from USAINTC concerning the individual involved.

b. SSG [b6] Operations Company, US Army Communications Command - CONUS and Fort Ritchie, with duty as a Teletype Repairman, Telecommunications Directorate, was reported as having questionable financial habits, i. e., indebtedness. Information contained in submitted Agent Report was reported to CANARY EFFORT CISP Coordinator, the Commander, Fort Ritchie, and the Director, Telecommunications. The Project Control Officer (PCO) and PLO will continue to monitor the aforementioned situation closely and report significant findings via appropriate Agent Report and to CANARY EFFORT CISP Coordinator.

c. Covert Sources within CANARY EFFORT target area continue to report information concerning drug and alcohol abuse by members of the US Army at Fort Ritchie and the AJCC. Covert Sources have also reported adverse suitability information, i. e., financial and moral indiscretion, involving both US Army and Department of the Army personnel at Fort Ritchie and the AJCC. Monitoring will continue.

4. (U) COMMENTS, REMARKS, AND RECOMMENDATIONS:

a. It is envisioned that a formal Quarterly Briefing will be presented to BG Redman, COL Manning, LTC Madsen, Mr. Carroll, and Mr. Kent in early January 1974. The aforementioned is deemed appropriate as this PLO did not become operational until 15 October 1973 and there is no record of a formal Quarterly Briefing having been presented concerning Operation CANARY EFFORT since 8 January 1973. The aforementioned proposed briefing will be held in abeyance until such time it is deemed appropriate, with USAINTC approval, to present BG Redman with the approved USAINTC CISP briefing, if applicable. The reader should also consider current instructions issued by Headquarters, 109th Military Intelligence Group, to the effect that ACIP coverage be expanded to include US Army Communications Command - CONUS elements not thus far included in the current operations plan governing CANARY EFFORT.

b. PLO and PCO enjoy an excellent working relationship as does PLO with his counterparts, liaison contacts, and Conventional Sources. It is invisioned that the CISP, Operation CANARY EFFORT, at Fort Ritchie will become increasingly productive and will ultimately afford the Commander, Fort Ritchie, with coverage desired, i. e., enhancement of the security posture of Fort Ritchie and the AJCC by means not locally available the Commander.

BY CDR USAINSCOM I-S1/PO
AUTH Para 1-603 DOD 5200.1R

SUBJECT: CENTRAL TAXI (U)

1.(U) CIRCUMSTANCES:

On 10 December 1973, Quarterly Progress Report Number 15 was presented orally to LTC Richard O. Aamot, Chief, Security Office, US Army Electronics Command (ECOM), Fort Monmouth, New Jersey, in LTC Aamot's office; no others were present.

2.(U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

a. The Lead and Development Report mentioned in Quarterly Progress Report Numbers 13 and 14 (IC-B-075 (T)) was approved by the US Army Intelligence Command. Recruitment of this prospective confidential source has been delayed, however, due to his heavy travel schedule. The Project Liaison Officer recently arranged a meeting between the PLO, the Project Control Officer and this prospective source, which will take place on 12 December 1973. His recruitment will be effected at this time.

b. The new PCO is now on station and has re-contacted all CENTRAL TAXI confidential sources at least two times. The sources promised their continued cooperation with the new PCO.

c. The name of the program has been changed from Aggressive Counterintelligence Program (ACIP) to Counterintelligence Screening Program (CISP).

d. Emphasis continues on spotting, assessing and recruiting conventional sources. A vigorous spotting and assessing effort was implemented by the PLO during the reporting period. The names of nine prospective conventional sources were forwarded by the Fort Monmouth Field Office on 23 October 1973 to the 109th MI Group Headquarters requesting contact approval. Approval was granted, and to date, the PLO has contacted and recruited three of these sources.

e. Due to the move of ECOM/Philadelphia to Fort Monmouth, the mission of the ECOM/Philadelphia CISP will be incorporated into CENTRAL TAXI.

3.(U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED:

a. On 2 November 1973, information was received that GS-4 FILE CLERK [b6] (see Quarterly Progress Report Numbers 11, 12 and 13) was separated from Government

DEALS IN GUNS — TO BLACKS FROM WASH (40) CONFISCATED BY LOCAL POLICE

Service and is no longer an employee at ECOM, Fort Monmouth. (CR-09-109-MON, re IC-B-072, dated 6 November 1973).

b. On 2 November 1973, information was received that ELECT TECH GS 11 b6 (see Quarterly Progress Report Numbers 11 and 12) allegedly continues to be involved in narcotics traffic. (CR-09-109-MON, re IC-B-072, dated 6 November 1973).

SUBJECT

c. On 2 November 1973, information was received that a US Army truck had been seen delivering unidentified articles on a weekly basis to a residence on Victor Avenue, West Long Branch, NJ, for approximately five months. This information was passed to CID, Fort Monmouth, for possible exploitation. (CR-09-109-MON, re IC-B-072, dated 6 November 1973).

d. On 5 December 1973, information was received that Ray Shields, later determined to be Sherman Ray Shields, DAC, b6 GS-11, Electronics Technician, Electronics Devices Branch, Production Engineering Division, Directorate of Research, Development and Engineering, ECOM, Fort Monmouth, was a heavy drinker of alcoholic beverages. An example of Shields' drinking problem was cited. On one occasion Shields came to work inebriated, and after being confronted by his supervisor, proceeded to urinate all over himself. (CR-10-109-MON, re IC-B-072, dated 7 December 1973; and Agent Reports by Special Agents Jerome A. Britton and Charles Grantham re Sherman Ray SHIELDS).

4. COMMENTS, REMARKS AND RECOMMENDATIONS:

a. Reference paragraphs 2a, 2b and 2d above: LTC Aamot expressed deep satisfaction with the progress of CENTRAL TAXI. He also stated that he intended on officially commending everyone connected with the CENTRAL TAXI CISP prior to his retirement in mid-1974.

b. Reference paragraph 2d above: Of the three conventional sources recruited, two are employees of the Electronic Warfare Laboratory, ECOM's most sensitive activity and previously void of source coverage; the third conventional source is employed with the Maintenance Directorate, originator of the majority of ECOM's security violations, also previously without source coverage.

c. Reference paragraph 3b above: LTC Aamot was advised that MAJ Quintarelli, Fort Monmouth Field Office Commander, and the PLO will pass the information concerning b6 alleged continued connection with narcotics to an appropriate agency.

d. Reference paragraph 3d above: LTC Aamot stated that he would handle the matter with utmost discretion.

FORT MEADE, MARYLAND 20755

ICGP-B-FM

19 December 1973

SUBJECT: Operation GONDOLA STAR (U)

WARNING NOTICE: SENSITIVE SOURCE AND METHODS INVOLVED

QUARTERLY PROGRESS REPORT NUMBER
Period 15 September 1973 to 15 December 1973

1. (U) CIRCUMSTANCES: On 29 November 1973, LTC Leroy Walton, Chief of Security, Aberdeen Proving Ground, (APG), MD was given the initial ICIP briefing and a progress report by the undersigned. Mr. Harry A. Mencke, Installation Intelligence Officer, APG and CPT Charles H. Lightner, Deputy Commander, Fort Meade Field Office, 109th MI Group, Fort Meade, MD were present. On 5 December 1973, COL Walter R. Harris, Commanding Officer, APG was given a progress report; Mr. Mencke was also present at this meeting.

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

a. This operation was inactive from the early spring of 1973 to October 1973. The Project Control Officer was reassigned during the spring of 1973 and the position was vacant until October 1973. The Project Liaison Officer retired in July 1973 and this position was vacant until November 1973. Both the new PCO and PLO are now in place and actively pursuing this operation.

b. Operation GONDOLA STAR (U) has two active covert Sources. The PCO has recontacted each Source and started a period of building rapport between the Source, PCO and Military Intelligence. During this period, the PCO is also concentrating on verifying placement and access, operational training and assigning current EEI. Initially, both Sources appear to be responding well to the PCO.

3. (U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED: No significant counterintelligence information was developed during the reported period.

4. (U) COMMENTS, REMARKS, AND RECOMMENDATIONS:

a. Subject OPLAN is currently under revision. Strong consideration is currently being given to the consolidation of operations GONDOLA STAR (U) and CANAL LOOP (U) since Aberdeen Proving Ground and Edgewood Arsenal consolidated into one installation on 1 July 1971. A status report will be

324

SCHEDULE OF EXECUTIVE ORDER 11652
EXEMPTION CATEGORY: X
DECLASSIFY ON: Cannot be determined

~~CONFIDENTIAL~~

submitted to Headquarters, 109th MI Group by 6 January 1974.

b. This PLO has initially placed emphasis on re-establishing liaison and acquiring updated information in support of this operation. Liaison has been established with both the headquarters and security offices of Aberdeen Proving Ground and Edgewood area, Aberdeen Proving Ground. Liaison is also in effect with both Military Police offices, the local FBI office, state police and the Harford County Sheriff's Office. Effort will be given to the development of additional Confidential and Conventional Sources during the next quarters. This PLO has served two pervious tours of duty at Aberdeen Proving Ground and is a native of Harford County; consequently, much personal liaison was already established when this PLO was assigned.

c. COL Harris, LTC Walton and Mr. Mencke have expressed strong interest in the support available through ICIP and have offered their full cooperation.

RICHARD L. GREIDER
Project Liaison Officer
Briefer

QUARTERLY PROGRESS REPORT NUMBER 14

Period: 1 September 1973 to 30 November 1973

SUBJECT: Operation GONG SILK (U)

~~WARNING NOTICE: SENSITIVE SOURCES AND METHODS INVOLVED~~

1. (U) CIRCUMSTANCES:

On 6 December 1973, Quarterly Progress Report Number 14 was presented orally to COL Jonathan L. Holman, Commander, Picatinny Arsenal (PA), Dover, New Jersey, and to Mr. John R. Greffe, DAC, Chief, Security Office, PA. Greffe is the CISP Coordinator for PA. The briefing was included in a liaison visit made by COL Charles E. Thomann, Commander, 109th Military Intelligence Group, Fort George G. Meade, Maryland. The primary purpose of this liaison visit was for COL Thomann to explain to COL Holman the methodology and purpose of the CISP, and to discuss conventional source limitations imposed by COL Holman during Quarterly Progress Report Briefing #3 on 6 September 1973. Other 109th MI Group representatives in attendance were LTC Glenn E. Vornsand, Commander, Northern Area Control Office; MAJ Nicholas F. Quintarelli, Commander, Fort Monmouth Field Office; MAJ Hugh Fitzpatrick, Assistant Group Operations Officer; and WO1 Eugene H. McNally, Project Liaison Officer, PA.

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

a. When briefed on the CISP on 6 September 1973 (reference Quarterly Progress Report #13), COL Holman expressed apprehension over the establishment of a conventional source program on his installation. As a result, he imposed the requirement that the names of all potential sources be coordinated in advance with his Security Officer, Mr. Greffe. Greffe had later stated that initially he would want to coordinate the selection of all conventional sources directly with COL Holman. Because there was a question as to the advisability of taking such action, PLO was instructed to begin spotting and assessing potential conventional sources; to complete the necessary investigative checks on those individuals selected; but to hold contact in abeyance until the limitations imposed by COL Holman could be resolved. During the reporting period, PLO selected and completed the investigative checks on 12 civilian employees within the target area at PA. Since initiation of the checks, one of the individuals has retired from government employment, and his file has been eliminated. PLO has formulated a conventional source contact approach plan, and has coordinated it with the Commander, Fort Monmouth Field Office.

b. The new Project Control Officer is now on station and has recontacted all GONG SILK confidential sources. The sources pledged their continued support to the new PCO.

3. (U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED:

326

[redacted]

Classified by [redacted]

SCHEDULE OF EXECUTIVE ORDER 11652
EXEMPTION CATEGORY [redacted]
DECLASSIFY ON [redacted]

Incl 29

~~CONFIDENTIAL~~

a. On 4 September 1973, an employee of the Aeroballistics Branch, Engineering Science Division, Feltman Research Laboratory, PA, visited the Security Office and stated that he believed that another employee possibly was tampering with equipment in the wind tunnel. PLO interviewed this unsolicited source on 5 September 1973 and on 20 September 1973 when he returned to relate further information. Additionally, a co-worker visited PLO on 21 September 1973, at the apparent encouragement of the individual who made the initial visit. These visits were recorded in Agent Reports, Subject: Possible Tampering of Equipment in Wind Tunnel, Engineering Science Division, Aeroballistics Branch, Experiment Evaluation Section, Feltman Research Laboratory, Picatinny Arsenal, Dover, New Jersey 07801, signed by PLO and dated: 4 September 1973, phase designation (OFFICIAL SOURCE); 6 September 1973, phase designation (MISCELLANEOUS); 20 September 1973, phase designation (MISCELLANEOUS); and 24 September 1973, phase designation (MISCELLANEOUS). Related reports were Agent Report, Subject: b6, CIV, b6 DPOB: b6 dated 4 September 1973, phase designation (201 FILE CHECK), signed by Thomas P. Ciccarelli, 109th MI Group; and Agent Report, Subject: SWETZ, Andrew J., CIV, b6 DPOB: 2 July 1920, Franklin, New Jersey, dated 10 September 1973, phase designation (201 FILE CHECK), signed by PLO. Information contained in all reports was provided to the Security Office, PA.

b. On 5 November 1973, a telephone call was received by the Office of the Army Materiel Command, Project Manager for Selected Ammunition, PA, from an individual who desired information regarding names and addresses of US Ammunition contractors. After telling the caller that he would check into the request and return the call, the employee receiving the call obtained the name and address of the caller and reported the matter to the Security Office, PA. Initial inquiries were made by the PLO and the 109th MI Group SECAP representative and the results of the inquiry were relayed to the Security Office, PA. The inquiry is reported in Agent Report, Subject: Request for List of Munitions Contractors in the United States, dated 6 November 1973, phase designation (MISCELLANEOUS), signed by PLO.

4. (U) (C) COMMENTS, REMARKS, AND RECOMMENDATIONS:

a. COL Holman obviously recalled the details of the last briefing, and indicated that he had given thought to a conventional source program at PA. His attitude was that although he was unaware of any threat, and did not feel that there was a threat, it would do no harm to have this preventive detection program implemented; therefore, he readily recommended that the conventional source program begin. COL Thomann gave an in-depth explanation of how the 109th Military Intelligence Group could be of assistance in the CISP and other fields, and COL Holman was impressed with the discussion and felt certain that those in Military Intelligence were the experts in the field. COL Holman was assured that before an individual would be selected as a potential conventional source, an extensive background check would be completed and that mature judgment would be employed throughout the operation. It was mutually agreed that the names of prospective conventional sources would be verbally cleared through Mr. Greffe, but that no list would be provided or maintained by the Security Office. COL Holman requested that if a "flap" appeared imminent during a contact, that he be immediately notified by PLO so that he could contact the individual and placate him. COL Holman was assured that this would be the procedure.

REGRADED UNCLASSIFIED

~~CONFIDENTIAL~~

[redacted]

b. Both COL Holman and Mr. Greffe appeared highly pleased with the command visit, and to have a proper awareness of the CISP. PLO has been given permission to initiate contact with the prospective conventional sources by HQ, 109th MI Group. Contacts will be effected on a deliberate "one-by-one" basis commencing mid December 1973. Because of this command visit, PLO feels that the obstacles have been removed and the operation can progress smoothly.

19 December 1973

SUBJECT: Operation CANAL LOOP (U)

~~WARNING NOTICE - SENSITIVE SOURCES AND METHODS INVOLVED~~

QUARTERLY PROGRESS REPORT NUMBER
Period 15 September 1973 to 15 December 1973

1. (U) CIRCUMSTANCES: On 29 November 1973 LTC Leroy Walton, Chief of Security, Aberdeen Proving Ground, (APG), MD was given the initial ICIP briefing and a progress report by the undersigned. Mr. Harry A. Mencke, Installation Intelligence Officer, APG and CPT Charles Lightner, Deputy Commander, Fort Meade Field Office, 109th MI Group, Fort Meade, MD were present at the briefing. On 5 December 1973 COL Walter R. Harris, Commanding Officer, APG was given a progress report; Mr. Mencke was also present at this meeting.

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

a. This operation was inactive from the early spring of 1973 to October 1973. The Project Control Officer was reassigned during the spring of 1973 and the position was vacant until October 1973. The Project Liaison Officer retired in July 1973 and this position was vacant until November 1973. Both the new PCO and PLO are now in place and actively pursuing this operation.

b. Operation CANAL LOOP (U) has five active covert Sources. The PCO has recontacted each source and started a period of building rapport between Source, PCO, and Military Intelligence. During this period, the PCO is concentrating on verifying placement and access, operational training, and assigning current EEI. All Sources initially appear to be responding well to the PCO.

3. (U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED: No significant counterintelligence information was developed during the reported period.

4. (U) COMMENTS, REMARKS, AND RECOMMENDATION:

a. Subject OPLAN is currently under revision. Strong consideration is currently being given to the consolidation of Operations GONDOLA STAR(U) and CANAL LOOP (U) since Aberdeen Proving Ground and Edgewood Arsenal consolidated into one installation on 1 July 1971. A status report will

EXEMPTION CATEGORY: 5
DECLASSIFY ON: Group 4 Restricted

~~CONFIDENTIAL~~

be submitted to Headquarters, 109th MI Group by 6 January 1974.

b. This PLO has initially placed emphasis on re-establishing liaison and acquiring updated information in support of this operation. Liaison has been established with both the headquarters and security offices of Aberdeen Proving Ground and Edgewood area, Aberdeen Proving Ground. Liaison is also in effect with both Military Police offices, local FBI office, state police and the Harford County Sheriff's Office. Effort will be given to the development of additional Confidential and Conventional Source during the next quarters. This PLO has served two previous tours of duty at Aberdeen Proving Ground and is a native of Harford County; consequently, much personal liasion was already established when this PLO was assigned.

c. COL Harris, LTC Walton and Mr. Mencke have expressed strong interest in the support available through ICIP and have offered their full cooperation.

d. COL Kenneth L. Stahl was assigned as the Commanding Officer, Edgewood Area, APG in September 1973. Since he had not been given the initial ICIP briefing, he was not given a progress report on 21 December 1973.

2. (U) Recapitulation of Operational Progress:

a. Official Military Personnel Files (OMPF) for ten (10) individuals appearing to meet the criteria for recruitment as a confidential source have been received from The Adjutant General's Office (TAGO). Meticulous review of these files is currently in progress.

b. Local and National Agency Checks concerning these individuals have been requested through channels established by the Liaison Branch, 902d MI Group. It is anticipated that the results of these checks will be forthcoming during the next reporting period.

c. Files maintained by the Civilian Personnel Office, The Pentagon, were examined concerning 17 individuals assigned to the target agency. Evaluation of the data contained in these files continues. Concurrently with this vetting process, Local and National Agency Checks were requested. It is anticipated that the results of the checks will be received during the next reporting period.

d. Additional identifying data on selected individuals assigned to the target agency has been submitted to the Investigative Records Repository. This information should resolve the problems encountered in dossier retrieval.

e. Attached as an inclosure is a report of counterintelligence inspection conducted at the target agency from 29 October to 5 November 1973.

REPORT OF COUNTERINTELLIGENCE INSPECTION
OF
United States Army Management Systems Support Agency
Room BD 1028, The Pentagon

SECTION I. INTRODUCTION

1. An announced counterintelligence inspection of the United States Army Management Systems Support Agency (USAMSSA), Room BD 1028, The Pentagon was conducted during the period 29 October through 5 November 1973, by the following Special Agents of the Pentagon Counterintelligence Force, 902d Military Intelligence Group:

William H. J. Count

George M. Vaughn.

2. Captain James K. Clements, Security Manager, acted as contact for and assisted in coordinating the activities of the inspection.

3. The last counterintelligence service was conducted during the period 21 to 25 August 1972.

SECTION II. SCOPE

4. This inspection included an examination of the degree of compliance with DOD Information Security Program Regulation 5220.1R and AR 380-5 of the following offices of USAMSSA:

Headquarters, Management and Administrative Support Group
Scientific Systems Division
Systems Development Division
Operations Division

5. USAMSSA has on hand approximately 850 SECRET documents and approximately 20 linear feet of CONFIDENTIAL material. No TOP SECRET documents are maintained within the USAMSSA.

SECTION III. FINDINGS AND RECOMMENDATIONS

6. There are no uncorrected or repeated findings.

7. Current Findings: No major deficiencies or shortcomings were noted during the inspection. Minor administrative deficiencies were corrected on the spot.

8. Physical Security: Only those aspects of physical security relating to classified storage were inspected in conjunction with this service. Four of the containers utilized for the storage of classified material do not meet the minimum requirements set forth in paragraphs 5-101 and 5-102, DOD Information Security Program Regulation 5200.1R. USAMSSA has requisitioned approved security containers to replace the unapproved containers. The unapproved containers are under 24-hour observation by USAMSSA personnel.

ON SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH Para 1-603 DOD 5200.1R

[redacted]

332

SECTION IV. COMMENTS

9. The overall security posture of the serviced area is excellent. The USAMSSA Security Education Program is considered adequate. Incoming personnel are briefed concerning the handling, storage, and transmission of classified information. In addition, all personnel are given a periodic review to determine their compliance with existing security regulations. USAMSSA is currently revising its existing SOP to enhance the overall security posture. Reproduction of classified material is held to a minimum consistent with operational necessity. A copy of the restrictions imposed on reproduction of classified material is posted near the reproduction machine. The USAMSSA requires a 100% monthly inventory of all SECRET documents recorded on the Division Log. Additionally, the USAMSSA requires a doublecheck of each item of equipment within the individual offices and that DAS Form 11 (doublecheck List) be signed and maintained on a daily working basis. The duty officer is required to carry numerous keys during his after duty checks. Master keys would better serve this purpose. The Pentagon Custodial Engineers have such master keys and arrangements could be made with them to obtain master keys for the offices within the unit. The USAMSSA needs to implement a preventive-maintenance program on its security containers, as handles on several security containers are loose.

SECTION V. EXIT BRIEFING

10. All aspects of this service were discussed during an exit briefing on 5 November 1973 with Captain James K. Clements, Security Manager.

/BYRON W. HUNT
LTC, MI
Commanding

ICGP-B-WA

13 December 1973

QUARTERLY PROGRESS REPORT NUMBER 1

Period: 25 October 1973 to 13 December 1973

WARNING NOTICE: SENSITIVE SOURCES AND METHODS INVOLVED

SUBJECT: Operation Lanyard Mood

1. (U) CIRCUMSTANCES:

On 25 October 1973, OPLAN Lanyard Mood was formally re-activated in a visit to MAJ Clyde Bryant, Security Officer, Defense Language Institute East Coast (DLIEC), by MAJ D.N. Kappel, Commander WFO; CW3 Clarence E. Barker, Liaison Officer, WFO; and CW2 Guy J. Battiste II, Project Liaison Officer (PLO), DLIEC. On 30 October 1973, PLO briefed MAJ Bryant on the CISP. It was agreed that the briefing of the Commander, DLIEC, should be delayed until the Oplan was rewritten and a positive approach to the program was developed. To date, all meetings with MAJ Bryant have been to further that purpose.

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

Screening of personnel at DLIEC has begun for the purpose of identifying those individuals whose backgrounds and/or activities might fall within the scope of the EEI in the Oplan, as well as those individuals who may be considered prospective sources in the future.

3. (C) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED:

Referred

4. (U) COMMENTS, REMARKS, AND RECOMMENDATIONS:

The revised Oplan for Lanyard Mood was submitted to Headquarters, 109th MI Group on 5 December 1973. Pending approval of the Oplan, the PLO will continue laying the groundwork for the operation at DLIEC, and screening personnel files to determine those personnel who might be of operational interest. The formal briefing of the Commander, DLIEC, has not been scheduled, but a target date for the briefing is within the first two weeks of January 1974. DLIEC has proven in the past to be a successful CISP target,

334

CONFIDENTIAL

Ind 3)

~~CONFIDENTIAL~~

and can be as productive in the future if approached properly. The structure of DLIEC, being divided into separate departments for each language, results in the departments becoming cliques of persons from similar backgrounds or countries, and therefore the instructors have little contact with persons outside their own department. This creates a more delicate situation than normal,and means that the operation must be approached slowly and positively, as rushing into something might result in a case of bad judgement and turn the situation from delicate to explosive.

ICGP-B-SY

11 December 1973

QUARTERLY PROGRESS REPORT NUMBER 1
Period 1 October 1973 to 31 December 1973

SUBJECT: Operation CANINE PLATE (U)

~~WARNING NOTICE SENSITIVE SOURCES AND METHODS INVOLVED~~

1. (U) CIRCUMSTANCES: On 16 November 1973, an initial briefing was given concerning the CISP at Seneca Army Depot, Romulus, New York, 14541, code named CANINE PLATE. Present for the briefing were COL Allen H. Light, Jr., Depot Commander; MAJ Noel L. Weaver, former Syracuse-Seneca Field Office Commander; CPT Denis F. Ausflug, present FO Commander; and CW2 Francis L. McGinn, Jr., CANINE PLATE Project Liaison Officer.

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD: In the briefing of 16 November, COL Light was informed of the intent and aims of CANINE PLATE, reference MFR, 6 December 1973, re: CANINE PLATE. No other overt activity has taken place. See paragraph 4 below for additional remarks.

3. (U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED: None.

4. (U) COMMENTS, REMARKS, AND RECOMMENDATIONS: The project liaison officer has been on station since December 1972. In the past year, through associations formed at social activities at the Seneca Army Depot Officers Club, the only area in which the PLO has sufficient reason for contact with depot personnel, three or four likely prospects for conventional sources have been spotted. An approach will be made as soon as one very significant problem has been resolved. It is almost certain, because of the very high degree of security consciousness of depot personnel, that any approach by the PLO will be treated with suspicion and reported to the depot security officials as a possible penetration attempt, or as a test of their SAEDA reporting system. This is directly against the wishes of COL Light, who wants knowledge of CANINE PLATE to be confined to himself. This leads to the conclusion that all prospective sources, at the time of recruitment, must be directed to ask COL Light any questions they may have concerning the PLO's veracity. This would reveal the identity of the sources

to the Depot Commander. The chances of having the project revealed with subsequent embarrassment to the Depot Commander and to the 109th MI Group are too likely to be ignored. Disclosure of the identity of conventional sources, when necessary, does not appear to contravene existing regulations; the same situation would apply to confidential sources although disclosure of their identity can only be done with the permission of the Commander, USAINTC. Fuller discussions of this matter will be held on 14 December 1973 with the Commander, Northern Area Control Office, at which time opinions and advice will be solicited.

QUARTERLY PROGRESS REPORT NUMBER 1

For the Period 10 September 73 to 10 December 73

SUBJECT: ICIP CENTAUR RACE (U) SENSITIVE SOURCES AND METHODS INVOLVED

1. (U) CIRCUMSTANCES: On 5 December 1973, MAJ Glen E. Robinson, Fort Lewis Field Office Commander, briefed LTC Homer Pickens, ACofS, 9th Infantry Division and Fort Lewis, representative of the Commanding General, 9th Infantry Division and Fort Lewis, on the progress of Internal Counterintelligence Program (ICIP) CENTAUR RACE.

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

a. A study concerning insertion of sources into the Fort Lewis military community has been completed and results will be forwarded by separate correspondence.

b. Aggressive screening, spotting, and assessment of Installation conventional sources and potential Confidential Sources is continuing and has been expanded to include all targets on Fort Lewis.

c. The first Source Lead and Development Report (SLDR) for ICIP CENTAUR RACE will be prepared and submitted within 30 days.

3. (U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED: There has been no significant counterintelligence information developed through the ICIP to date due to the lack of formally recruited sources.

4. (U) COMMENTS, REMARKS, AND RECOMMENDATIONS: LTC Pickens, ACofS, 9th Infantry Division and Fort Lewis, continues to have an interest in ICIP CENTAUR RACE, and has cooperated with Fort Lewis Field Office to the fullest extent. It is the desire of the Commanding General, 9th Infantry Division and Fort Lewis, not to be present for briefings unless significant counterintelligence information is to be discussed.

3 December 1973

QUARTERLY PROGRESS REPORT NUMBER 2

CENTAUR SALE

Period 13 October 1973 to 28 November 1973

1. (U) CIRCUMSTANCES:

On 28 November 1973, CW3 James E. Harnish, Project Liaison Officer (PLO), MERDC, provided Colonel Tehno R. Hukkala, Commander, MERDC, Leslie L. Askew, Security Officer, MERDC, and Edna T. Payne, Assistant Security Officer, MERDC, with the 2nd Quarterly CISP Briefing. The briefing was presented one week earlier than projected due to the uncertainty of the Commander's pre-holiday December schedule. The briefing was well received with no problems encountered.

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

Six prospective Sources were spotted during this period.

3. (U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED:

During this period three Agent Reports were produced. These reports were as follows: b6, DPOB: b6 SSG b6, report submitted 26 October 1973, concerned suitability due to indebtedness; b6, PDOB: b6 b6 CIV b6 report submitted 5 November 1973, concerned suitability due to alcohol drinking problem; b6 DPOB: b6 b6 SSN b6 report submitted 21 November 1973, concerned a threatening telephone call.

4. (U) COMMENTS, REMARKS, AND RECOMMENDATIONS:

At the present time there is no approved CPLAN available for this project at the Washington Field Office. The next Quarterly Briefing of the Commander, MERDC, will be within the first two weeks of March 1974, and will realign the briefing schedule. MERDC is a good CISP target, and has the potential for a successful project, however the PLO's time on site is limited due to being PLO at another installation also. To be more effective MERDC must be a full time project.

QUARTERLY PROGRESS REPORT NUMBER 2

SUBJECT: CENTAVO KID

Period 12 October 1973 to 12 November 1973

WARNING NOTICE-SENSITIVE SOURCES AND METHODS INVOLVED

1. (U) CIRCUMSTANCES:

On 12 November 1973, the Commander, Harry Diamond Laboratories(HDL), was briefed on the revised CENTAVO KID OPLAN. Present at the briefing were, Colonel David W. Einsel, Commander, HDL, Major D.N. Kappel, Commander, WFO, 109th MI Group, Major Thomas R. Mooney, Executive Officer, HDL, CW3 James E. Harnish, PLO, Alfred F. Schneider, Security Officer, HDL, and James H. Yeick, Assistant Security Officer, HDL. Due to the close proximity between this briefing and the December Quarterly Briefing, both were combined. The briefing was well received and no problems were encountered. The next Quarterly Briefing will be delivered within the first two weeks of March 1974, and will realign the briefing schedule.

2. (U) RECAPITULATION OF OPERATIONAL PROGRESS DURING THE PERIOD:

Since the approved and revised OPLAN has been available, six potential Sources are undergoing Local Agency Checks. A problem in cooperation as indicated in Quarterly Progress Report Number 1 within the HDL Security Office has been resolved and cooperation from the Security Office has improved.

3. (U) SIGNIFICANT COUNTERINTELLIGENCE INFORMATION DEVELOPED:

One Agent Report was produced during this periodas follows: LAMERS, Guillermo B., DPOB: 29 January 1935, Buenos Aires, Argentina, CIV b6 , b6 report submitted 19 October 1973, concerned suitability information.

4. (U) COMMENTS, REMARKS, AND RECOMMENDATIONS:

DAMI-DOH

Quarterly ICIP Reports (U)

CDR, USAINTA
ATTN: MIIA-SO
FT MEADE MD 20755

DAMI-DOH

LTC Haendle/mjb/56159

1. (U) Reference, message, DAMI-DOH, 032115Z Dec 75.

2. (U) Attached for your files is a copy of the INFORMATION MEMORANDUM to the Under Secretary of the Army (less inclosures) which forwarded summaries of the nine on-going CONUS ICIP operations as submitted by your headquarters. The summary pertaining to a proposed ICIP by the 66th MI Group in support of USASA was not included in this submission. Upon receipt of a response to the above referenced message, a decision will be made whether to include that operation in the next quarterly report.

3. In staffing the Quarterly ICIP Report within OACSI, the Acting Director of Intelligence Operations noted that many of the summaries of on-going actions contained too many details of individual character/behavior issues. In future quarterly reports, suitability-type information pertaining to individuals covered by the ICIP project should be either eliminated or summarized in general comments.

4. On a seperate matter, when the ACSI reinstated the ICIP CONDOLA STAR in July 1975, he indicated he would review the ICIP in six months to determine if significant information had been developed to warrant continuation of the project. It is requested that your headquarters conduct a review of this ICIP and furnish your comments and recommendations to this office by 9 January 1975.

FOR ACSI APPROVAL. HOWEVER, IN THE ABSENCE OF DETAILED ARMY-WIDE GUIDANCE ON ICIP, IT IS DIFFICULT TO DETERMINE WHICH USAREUR CI PROGRAMS AND PROJECTS MEET THE CRITERIA AND DEFINITION OF ICIP AS PERCEIVED BY OACSI. IN THIS REGARD, THE FOLLOWING [illegible] CI OPERATIONS ARE DESCRIBED:

A. CARELESS TOKEN: ICIP DEVELOPED, AND IMPLEMENTED BASED UPON REF B THRU E IN SUPPORT OF DET N, USASA FIELD STA AUGSBURG, LOCATED AT RIMBACH , FRG. THE OPLAN WAS APPROVED BY CDR, USASA ON 30 JUN 75 AND BY ODCSI, USAREUR ON 15 JUL 75. THE ICIP IS IN ITS EARLY STAGES OF IMPLEMENTATION AND WHILE A NUMBER OF COUNTER-INTELLIGENCE RECRUITMENT LEADS HAVE BEEN DEVELOPED, NO FORMAL RECRUITMENT OF CONFIDENTIAL SOURCES HAS YET BEEN ACCOMPLISHED.

B. GROUP BAND: CI PROJECT BASED UPON REF F AND G INVOLVING USAINTA RECRUITMENT OF 10 STERILE SOURCES IN CONUS FOR INSERTION INTO 56TH ARTY BDE, USAREUR FOR COLLECTION OF COUNTER-SUBVERSION AND COUNTERSABOTAGE INFO. THE END OF US INVOLVEMENT IN VIETNAM AND THE CONCOMITANT SHARP DECREASE IN SUBVERSION/SABOTAGE INCIDENTS VIRTUALLY ELIMINATED THE NEED FOR THESE SOURCES. NORMAL ATTRITION HAS RESULTED IN ONE REMAINING GROUP BAND SOURCE IN USAREUR WHO IS CURRENTLY HANDLED AS A CASUAL DEFENSIVE COUNTERESPIONAGE SOURCE.

C. CERTAIN SMILE: AN ICIP IMPLEMENTED IN 1973 WITHIN CERTAIN KEY STAFF OFFICES AT HQ USAREUR IN AN EFFORT TO IDENTIFY

REGRADED UNCLASSIFIED
ON SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

[illegible] ILLEGAL CONDITIONS CONDUCIVE TO HOIS EXPLOITATION. THE [illegible] DEVELOPED CONSIDERABLE INFORMATION REGARDING GENERAL [illegible] SECURITY VIOLATIONS [illegible] AND PERSONNEL SUBJECTIVE INFORMATION; HOWEVER, THE PROJECT WAS EVENTUALLY DEEMED [illegible] AND SUPERFICIAL TO BE OF VALUE IN IDENTIFYING ACTUAL [illegible] OPERATIVES OR ACTIVITIES. CERTAIN SMILE WAS [illegible] AS AN SCIP IN 1975 AND IT'S ASSETS REDIRECTED TO- [illegible] A SCI CASUAL SOURCE PROGRAM. THIS OFFICE IS CURRENTLY PREPARING AN OPLAN FOR CINCUSAREUR APPROVAL WHICH WILL IN- VESTIGATIVELY ADDRESS THE SUSPECTED HOIS THREAT AGAINST HQ USAREUR.

D. CAREFREE TALENT: RECENT DEVELOPMENTS IN BERLIN BASED OFCO'S HAVE REVEALED INTENSE INTEREST BY SIS IN DET A, A SPECIAL FORCES UNIT STATIONED IN WEST BERLIN. MOREOVER, SIS CASE OFFICERS HAVE DISCLOSED SUFFICIENT KNOWLEDGE OF DET A TO RAISE THE POSSIBILITY OF A SUCCESSFUL SIS PENTETRATION OF DET A. BASED ON A REQUEST BY CDR, BERLIN BDE, A CONCEPT OF OPERA- TIONS (COPO) WAS FORMULATED, DESIGNED TO FULLY IDENTIFY, NEUTRALIZE OR EXPLOIT THIS APPARENT SIS THREAT THROUGH DEFENSIVE AND OFFENSIVE COUNTERESPIONAGE ASSETS, INCLUDING JUDICIOUS RECRUITMENT OF SOURCES WITHIN SPECIAL FORCES RANKS. THE COPO [illegible] APPROVED BY ODCSI, USAREUR FOR IMPLEMENTATION ON 18 SEP 78.

E. CARDINAL FLIGHT: BERLIN OFCO'S HAVE ALSO REVEALED KEEN

REGRADED UNCLASSIFIED
ON SEP -5 1997
BY CDR USAINSCOM FOI/PO

Page 1851 of 3957

INTEREST BY SIS IN USMLM ACTIVITIES/PERSONNEL AND OBVIOUS EFFORTS BY SIS TO EFFECT PENETRATION. 66TH MI GP HAS BEEN TASKED TO PREPARE A COPD DESIGNED TO NEUTRALIZED OR EXPLOIT THIS SIS ACTIVITY.

3. (U) ALTHOUGH ICIP IN CONUS IS TREATED AS A CI SERVICE, THOSE FOREIGN PROGRAMS/PROJECTS DESCRIBED IN PARA 1, SUPRA, WITH THE EXCEPTION OF GROUP BAND, ARE CONSIDRED DEFENSIVE COUNTERESPIONAGE OPERATIONS INITIATED AS THE RESULT OF DEMONSTRATED OR SUSPECTED HOIS THREATS. IN ALL CASES, APPROPRIATE COMMANDERS HAVE BEEN BRIEFED ON THE PERCEIVED HOIS THREAT AND HAVE EITHER REQUESTED OR CONCURRED WITH THE CI NEUTRALIZATION PLAN.

4. (U) THE OPLAN PERTAINING TO CARELESS TOKEN IS BEING FORWARDED TO YOUR OFFICE FOR APPROVAL; QUARTERLY STATUS REPORTS ALSO WILL BE FURNISHED

5. (U) REQUEST YOUR COMMENTS AS WHETHER EITHER OF THOSE PROJECTS DESCRIBED IN PARA 1D AND 1E, SUPRA MEET THE CRITERIA FOR ICIP AND THUS REQUIRE ACSI APPROVAL.

6. (U) FURTHER REQUEST DETAILED GUIDANCE REGARDING OACSI ICIP POLICY AND PROCEDURES BE FURNISHED AT AN EARLY DATE.

7. (U) ODCSI, USAREUR, ACTION OFFICER IS MR DAVID R. SMITH, AEAGB-CI(SO), MM 7354 (AUTOSEVOCOM 6742).

Commander
66th Military Intelligence Group
ATTN: AEUHI-I-CI (EXCLUSIVE FOR ICIP CONTROL OFFICER)
APO 09108

1. (U) References:

a. OPLAN, 511th MI Battalion, AEUHI-N-CE, 1-75, 1 May 1975

b. AEAGB-CI(SO), DTG 151640Z July 1975, ICIP

2. (U) This is the first ICIP Quarterly Status Report, in accordance with references, covering the period ending 15 October 1975.

3. (U) General:

a. Activity at the target is in the drawdown stage, pending automation in early 1976 under the LA FAIRE VITE Program. Since 1 July 1975, personnel manning has been reduced to about 50 percent of previous target strength; most personnel have been reassigned to USASAFS Augsburg. In June 1975, an official release was made by letter to the Buergermeister (mayor) of Rimbach, which provided details of the withdrawal. Portions of the letter were reportedly published in area newspapers. A copy of the English translation of the letter to the mayor's office is attached as Inclosure 1.

b. Contrary to the letter inclosure, it appears that some target personnel in excess of the programmed approximately seven (7) individuals who will maintain and guard the automated site, may remain in the area for varying periods up to 1 July 1976. These include all personnel who

2

~~CONFIDENTIAL~~

AEUSI-N-CE 24 October 1975
SUBJECT: Internal Counterintelligence Program (ICIP)

are scheduled for DEROS or ETS in FY76 as funding is not available for two PCS moves in a single fiscal year. No figures were available at the time of the QSR preparation as to how many personnel would be affected, nor had it been determined what would be their duties during the approximate period 1 March-30 June 1976.

c. The USAF communications site (6913th USAF Security Squadron) located in the same area is scheduled to close at about the same time the target is automated; no USAF personnel will remain in the area. As far as can be determined, the French and Bundeswehr sites will continue to operate.

d. The seven or eight personnel scheduled to remain at the target permanently will be billeted at the top of Mount Hoherbogen, in a newly constructed building, adjacent to the present operational area. The senior individual will be an NCO, grade E6 or E7, who will probably have one of the supervisory communications equipment maintenance MOS's. Other personnel stationed there will be equipment and antenna array repair and maintenance specialists and guards. All personnel will be single or unaccompanied. At the writing of this report, none of the permanent party had been selected.

4 (U) (C) Operational Matters:

a. SMLM-F makes a reconnaissance of the Rimbach area approximately once a month. The sightings usually involve travel along the PRA perimeter roading leading north and south out of Rimbach. Perimeter roads of PRAs, excluding Autobahnen, are off limits to SMLM-F vehicles. On 3 June 1974, a SMLM-F vehicle was disabled on the access road leading to the target operational site, well within a PRA, and was assisted by a Chief Warrant Officer assigned to the target, who was not aware of the correct PRA boundary. There have been no SMLM-F detentions in the area, and none are likely, since the closest Military Police are located at Hohenfels Training Area (HTA), 80 kilometers away.

b. In March1975, during a liaison visit with MAJ Richard Douma, the target commander, the PLO was advised that MAJ b6 b6 had been transferred to Ramstein, FRG after appearing before a board to face charges of homosexuality.

c. In April 1975, SP4 b6 reported a possible SAEDA incident (Group Case 75-061P); during the subsequent investigation it was determined she had reported to Field Office Augsburg a similar approach by the same individual a year earlier. Target personnel were dubious as to the veracity of statements made by b6 who was transferred to USASAFS, Augsburg on 1 August 1975.

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

AEUTI-H-CE 24 October 1975
SUBJECT: Internal Counterintelligence Program (ICIP)

d. In May 1975, MAJ Douma advised the PLO that some of the target personnel had a tendency to talk too openly about their jobs in public, and that his solution had been constant reiteration to unit personnel on the dangers of loose talk. No specifics were provided on individuals concerned. The PLO did not press for details as he considered it a command matter. MAJ Douma believed the security posture of the target was steadily improving.

e. The preliminary investigation of b6 continued, however, in low key due to the lack of credible specific allegations. b6 operates the Hoherbogen Restaurant, situated near the target administrative area. He allegedly travels regularly to CSSR to visit relatives and to attend dog shows. Target personnel patronize the restaurant regularly, primarily because of its convenient location. b6 was never reliably reported to have shown undue curiosity about target operations and personalities, but remains, nevertheless, well-informed because of overheard conversations of target personnel-customers. In June1975, b6 told the PLO he was not looking forward to the departure of the Americans because he would have to "put up" with local German customers, who were much more troublesome than target personnel. In October 1975, b6 remarked to MAJ Douma that he had made several trips to Augsburg to negotiate the purchase of a tavern there. b6 said he intended to sell the Hoherbogen Restaurant and move to Augsburg, where he will open a tavern/restaurant two kilometers from the "ASA kaserne." Activity of b6 will continue to be monitored in the Rimbach area, and if he moves to Augsburg, he should be made a target of continuing interest by Field Office Augsburg.

f. In July 1975, CPT (Chap) b6 Protestant Chaplain at HTA, advised that an individual assigned to the target had sought his spiritual guidance as a result of extreme emotional anxiety, due to his/her involvement with a group of USASA personnel who were engaged in satanic religious practices at the target. b6 revealed no details nor identities, due to the sensitivity of communications to a chaplain, however, the identity of the individual involved is believed to have been established (see para 4j, below).

g. In July 1975, two target personnel applied for Military Intelligence duties in ACGP-97. One (SP5 b6 was assisted in completion of required forms and processing/interview is in progress. The other individual (SP4 b6 will not be able to apply until December 1975, when he has 12 months remaining to DEROS. He expects to be transferred to USASAFS, Augsburg prior to that time and has been advised to initiate his processing at Field Office Augsburg.

358

~~CONFIDENTIAL~~

Page 1857 of 3957

AEUMI-R-CE 24 October 1975
SUBJECT: Internal Counterintelligence Program (ICIP)

h. In July 1975, USASAFS, Augsburg requested agency checks on the German national intended spouse and relatives of SP4 b6 Subsequently, during a subject interview, b6 stated that his fiancee had contact, through an acquaintance, with b6, a photographer/reporter for a Furth-im-Wald newspaper and that he suspected b6 was receiving money from the CSSR for photographs of facilities in the Rimbach area. b6 had no specific reason to back up his suspicion and said it was common knowledge among target personnel. (b6 was the subject of a bilateral MI/MAD investigation in 1973 and 1974, during which none of the allegations of possible intelligence activity were substantiated.) b6 also said he personally was suspicious of fnu b6, a former member of the target unit, who operates "b6's Club" in Koetzting. b6 is curious as to the status of US installations at Rimbach and uses his US citizenship and former Army service as a method of gaining access to information from US Forces members who patronize his establishment. b6 and his activity was previously known to MI/MAD during the b6 investigation and not determined to warrant further investigation. b6 is a non-DoD affiliated US citizen.)

i. In July 1975, USASAE, Augsburg requested agency checks in Koetzting on b6 and Dr. b6, who were friendly with target personnel and who had become knowledgeable of classified defense information as a result of this relationship. There was no indication any of the b6's had attempted to elicit defense information. Agency checks failed to reveal any derogatory information concerning the b6 family; Dr. b6 was a practicing dentist in Koetzting. In early August 1975, MAJ Douma advised the PLO that in early 1975, SP4 b6 and her dependent husband, b6, a US citizen, had attempted to establish a German-American Club between target personnel and the local communities. In this connection, the b6's mentioned being acquainted with a dentist in Koetzting, nfi. Nothing of consequence ever came of the attempt to form an organization. Later, date unknown, Douma was advised by Commander, Forward Operations Battalion, Augsburg (his supervisor) of a report that b6 had discussed classified information with German acquaintances. In an interview of b6 by Douma, she admitted having discussed details of LA FAIRE VITE with her husband in early 1975, and to have mentioned the project in the presence of one b6, a German national acquaintance residing in Munich. b6 was subsequently given a written reprimand in connection with the compromise. b6 mentioned nothing about any other German acquaintances, and denied compromising any classified information to any other foreign nationals. No information was made available to Douma when he was tasked by his higher headquarters to investigate the incident, as to the identity of the German acquaintances who were supposed to have received the classified defense information. b6 departed the target on 19 July 1975 for CONUS and separation from active duty.

AEUAI-N-CE 24 October 1975
SUBJECT: Internal Counterintelligence Program (ICIP)

j. In August 1975, MAJ Douma advised the PLO that SP4 [b6] attached to the target from the 502d ASA Group as a Czech linguist Voice Intercept Specialist (98G2LCX), had exhibited severe mental trauma immediately following the departure of a close female acquaintance from the target on 30 June 1975, and had been placed on extended leave status. [b6] consulted CPT (Chap) [b6] at HTA and the USASAFS Augsburg staff chaplain, but had allegedly declined psychiatric counselling. On her return from leave, her access to classified material was to be suspended and Douma could direct [b6] to receive counselling, as he was very concerned about her emotional stability. [b6] had a DEROS of September 1975.

k. In August 1975, the PLO advised MAJ Douma that a German agency had reported a US soldier named [b6] was trafficking in drugs in Goetzting. After the PLO provided descriptive data obtained from a FRG agency, Douma identified [b6] as SP4 [b6] a Russian-linguist Voice Intercept Specialist, attached from the 502d ASA Group. Douma was requested to watch [b6] activities closely and pass any information to CID at HTA. [b6] DEROS is June 1976, putting him in the category of those mentioned in paragraph 3b, above, who may remain at the target without any specific duties.

l. In September 1975, B58,786 (who is undergoing preliminary source assessment) advised that in approximately April 1975, a female soldier traffic analyst assigned to the target, whose name he could not recall, had compromised a TOP SECRET/CRITIC/CODEWORD message to [b6] a dependent and GS-2 clerk typist in the unit administrative office. [b6] had only a Confidential clearance. The compromise although known by the target commander, was not reported to USASAFS, Augsburg.

m. No specific information has been reported to indicate that Hostile Intelligence agencies are in contact with any target personnel.

(U) Source Activity:

a. One potential source (B58,786), has been spotted at the target and is being assessed. Name traces are not yet complete. He is scheduled for reassignment to USASAFS, Augsburg on approximately 15 December 1975. In accordance with paragraph 3b of reference a, a Lead Development Report is being prepared and will be forwarded separately, recommending his possible utilization as a defensive installation source in Augsburg.

b. The lack of identification of any personnel who will make up the permanent party at the target has inhibited any meaningful spotting/assessing activity to date.

~~CONFIDENTIAL~~

AEUMI-N-CE 24 October 1975
SUBJECT: Internal Counterintelligenee Program (ICIP)

6. (U) Comments:

a. The PLO was indoctrinated for SI on 9 October 1975. Request Special Operations Detachment determine if any more Quarterly Security Inspections are scheduled for target, and arrange for prior notification and coordination so that the PLO may accompany the inspecting team. Any insight gained into security problem areas not evident from routine liaison contacts would be of great value to the PLO in accomplishment of his mission.

b. The PLO has reported that he is unable to pursue a more aggressive approach with the target commander concerning identities of personnel who will remain at the target, without arousing suspicion as to his true motives. Request Special Operations Detachment attempt to identify those individuals as soon as the determination is made.

c. The short period remaining of continued operations at the target raises the question as to whether the project would be justified at that location in the long term. As presently visualized, according to available information, any source recruited at the target would be primarily reporting on six or seven other personnel, with whom he is living in a very close, restrictive environment. It can be expected the majority of the information reported will be of an adverse suitability nature. Further, it can be expected that with target automation, Hostile Intelligence efforts at the target will take a lower priority inasmuch as product expolitation through the human exploitable factor will no longer be present. The Commander, USASAFS, Augsburg raised some of these points when reference a was staffed through his office.

ACTION SHEET [redacted] CONFIDENTIAL

SUBJECT	OFFICE SYMBOL	SUSPENSE
Internal Counterintelligence Program (ICIP) (U)	DAMI-DOH	
	DATE: 18 November 1975	

ACTION REQUIRED

To advise USAREUR of the Quarterly Report requirement for ICIP.

MEMORANDUM FOR RECORD. (Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without resource to other sources.)

1. (U) (C) BACKGROUND:

a. (U) (C) In an exchange of SSO messages between USAREUR and USAINTA, HBG 2802, 191755Z Jun 75 and DNT 1092, 0111540Z Jul 75 (TAB B), ODCSI, USAREUR requested assistance in coordinating with CDR, USASA a draft OPLAN of an ICIP in support of USASA Field Station, Augsburg, FRG. The CDR, USASA approved the proposed Operations Plan.

b. (U) (C) A Memorandum for Record prepared by former ICIP action officer, dated 27 Sep 75 (TAB C), outlines the ACSI's stated policy regarding his validation of all future operation plans for the ICIP.

c. (U) At TAB D is a Memorandum to the Vice Chief of Staff from the Under Secretary of the Army which outlines the requirement for quarterly reports on the ICIP.

2. (U) (C) DISCUSSION:

a. (U) (C) The USAREUR proposed ICIP in support of the USASA Field Station in Augsburg marks the first extension of the program overseas. There is no indication that the ACSI has validated the OPLAN for the project.

b. (U) This action advises USAREUR by message of the ACSI's policy on the ICIP and requests the OPLAN be forwarded for ACSI review. The message further advises of the quarterly report requirement to the Under Secretary.

3. (U) RECOMMENDATION: That the Acting Director of Operations sign the message to CINCUSAREUR at TAB A.

MEMORANDUM FOR THE RECORD

SUBJECT: ICIP Briefing for Under Secretary of the Army (U)

1. (U) On 25 September 1974 MG Aaron briefed Mr. Herman Staudt, on the ICIP. Mr. Staudt expressed reservations about operational control within the program and concern about the sudden rapid growth. He wanted assurances that the program was carefully monitored precluding the possibility for embarrassment.

2. (U) General Aaron assigned the following tasks to USAINTA through Mr. Leslie Hime, the USAINTA representative at the meeting.

a. Prepare all the operations plans for review; General Aaron will personally re-validate each plan.

b. Prepare source dossiers for review. General Aaron wants to be able to personally be assured that all sources are of such maturity and stability that they would not cause any embarrassment to the Army.

3. (U) General Aaron will personally validate and approve all future operations plans and will assume command and control of the program. Only essential plans will be approved and permitted to continue. General Aaron did not consider the operation at the War College to be essential.

4. (U) Operations plans and dossiers will be reviewed on 4 October 1974.

MEMORANDUM FOR THE VICE CHIEF OF STAFF
United States Army

SUBJECT: Aggressive Counterintelligence Program (ACIP) Operations

On 4 December 1971 you forwarded to me a memorandum from the Assistant Chief of Staff for Intelligence, SUBJECT: Counterintelligence Policy Guidance, which informed me of the ACSI's decision to reactivate certain Aggressive Counterintelligence Program (ACIP) Operations. Attached to the memorandum was the operation plan for one such operation. I have reviewed that memorandum and the attached plan, and although I appreciate the conscientious steps which have been taken to assure adherence to current policies in this area, I remain concerned that this program may be placing us in a highly vulnerable position.

DoD Directive 5200.27 and the implementing Army policy letter dated 1 June 1971 impose two restrictions which are particularly relevant to ACIP operations. First, they require that there be "no covert or otherwise deceptive surveillance or penetration of civilian organizations" without the prior approval of the Chairman, DIEC (now the Assistant Secretary of Defense (Comptroller)). Second, they prohibit assigning DoD personnel "to attend public or private meetings, demonstrations, or other similar activities for the purpose of acquiring information the collection of which is authorized" without my prior approval, except in emergency situations. These prohibitions apply whether or not the formal "target" of the operation is affiliated with the Department of Defense. Although the ACSI letter approving the first reactivated ACIP operation incorporates these restrictions by reference (paragraph 3a), the operation plan and related documents obviously assume that confidential sources working in the operation may obtain and report information which they receive in the course of activities off military installations. While the plan prohibits extending the collection effort "directly" to non-DoD personnel (paragraph 4a(a)), and while the ACSI approval letter prohibits making non-DoD personnel "targets" of off-post surveillance, I would assume that it is entirely possible that in the course of their off-post activities confidential sources might obtain and report information

on non-affiliated civilians. Although such activity might not in all situations be forbidden by DoD Directive 5200.27, it is clearly on the borderline, and I therefore feel it is very important that these operations be closely supervised and tightly controlled.

In order to make an informed decision about whether further controls are necessary (including possible Under Secretary or DIRC review of each operation), I would appreciate your taking the following steps:

1. Beginning March 31, 1972, I would like to receive a quarterly report containing the following information on each ACIP operation in progress at any time during the reporting period. Date approved, code-name, location, number of confidential sources used during reporting period, number of instances in which information on non-affiliated civilians is obtained off-post and reported, and a brief narrative statement explaining whether useful information was obtained during the reporting period, whether the operation is to be continued, and if so, why. These reports may be submitted 30 days after the close of the calendar quarter which they cover.

2. With the second quarterly report, which will be due July 31, 1972, I would like to receive a full analysis of this program, including its value in terms of producing useful information and the adequacy of the controls which have been imposed. Recommendations for any further necessary controls should be included.

21 Nov 75

MEMORANDUM FOR: MR. KELLY, ACTING DIRECTOR OF INTELLIGENCE OPERATIONS

24 Nov

SUBJECT: Discussions with JCS Security Officer on ICIP CANARY EFFORT

1. (U) (C) At the request of LTG Grimes, Special Operations Detachment, USAINTA, LTC Haendle from this office visited Mr. Guerrieri, Chief, Security Office, JCS on 20 Nov 75 to determine if he had requested briefings for the Director of the Joint Staff and the J3, JCS. LTC Grimes had learned that the 902d MI Group was preparing to brief on the ICIP CANARY EFFORT at Fort Ritchie, MD and questioned the need for such briefings.

2. (U) (C) Mr. Guerrieri stated that he had learned in passing conversation with a member of the PCF that Army was providing ICIP support to Joint Activities at Fort Ritchie, MD. He was disturbed about the potential embarrassment of such activities and stated he had not previously been aware of this type of support. He had requested that various JCS offices be briefed. He read from a letter prepared by the Commander, Alternate National Military Command Center (ANMCC) to the Commander, USAINTA, dated November 1974 which had requested ICIP support and indicated this request had not been cleared with either his predecessor or the J3, JCS. (This request was never forwarded to OACSI so far as can be determined).

3. (U) (C) It was explained that an existing ICIP CANARY EFFORT in support of Army organizations at Fort Ritchie, MD had recently (Sep 75) been revalidated by the ACSI resulting from a reorganization of the supported command. Included in the revised OPLAN was overlapping support to the ANMCC and its Support Directorate. However, the ICIP, which has been in existence for several years, was primarily in support of Army activities.

4. (U) (C) Mr. Guerrieri indicated he would prefer that no such operation existed in support of JCS activities at Fort Ritchie and would so recommend this to his supervisor, COL O'Brien, Director of Admin Services, JCS. It

21 Nov 1975

MEMORANDUM FOR RECORD

SUBJECT: ICIP CANARY EFFORT

1. (U) On 19 Nov 75, LTC Grimes USAINTA requested that I visit a Mr. Guerrieri, Chief, JCS Security Office, 1A688, The Pentagon to determine if Guerrieri had requested briefings on CANARY EFFORT for the Director of the JCS and J3. LTC Grimes indicated he had just learned the 902d MI Gp was ginning up for these briefings which he considered unnecessary. LTC Grimes advised the 902d MI Gp to hold up until informed otherwise.

2. (U) Mr. Guerrieri was not in his office on 19 Nov 75 and was not visited until 1430 hours, 20 Nov 75. In the meantime, the undersigned determined that a request for an ICIP had been initiated by the Commander, Alternate National Military Command Center (ANMCC) to the Commander, USAINTA in November 1974. Correspondence between USAINTA and the 902d MI Gp established that the existing ICIP CANARY EFFORT could be expanded to provide coverage to the ANMCC. (None of this correspondence was discussed at OACSI level so far as could be determined). In the meantime the 902d determined that the OPLAN for CANARY EFFORT required revision due to a reorganization of the Supported Army Command. It was decided to add target coverage to the ANMCC as well as the AJCC, ANMCCSD, and ECTC, all at either Ft Ritchie (Site R) or Ft Detrick. The revised OPLAN was approved by the ACSI on 15 Sep 75.

3. (U) In conversation with Mr. Guerrieri, it was determined that he learned of the ICIP in passing during a conversation with a representative of the PCF. He was more than a little disturbed that no one in JCS, particularly the Security Office, was aware of the project. He reiterated at great length that he recognized the Army was merely responding to a legitimate request, prepared on JCS stationary, but that the potential for embarrassment from such an operation clearly disturbed him. The undersigned discussed briefly the fact that the Army ICIP in support of Army activities at Ft Ritchie had existed for many years. Even though the ANMCC request for support occurred in 1974, the expansion of the Army Security service to include joint activities was not approved by the ACSI until Sep 75.

DAMI-DOH
SUBJECT: ICIP CANARY EFFORT

Further, from correspondence received at OACSI, the indications were that the ICIP still supported Army commands in the main, but could be of assistance to the ANMCC if serious breeches of security were uncovered which affected joint activities in adjoining areas. Mr. Guerrieri reiterated his concern for the Privacy Act impact upon such security operations and generally gave the impression he was concerned that the ICIP would cause his office headaches in the future. He would prefer that no such operation supported JCS activities and would so recommend this to his boss, COL O'Brien, USA, Director of Admin Services, JCS.

4. (U) It was agreed that a USAINTA representative would brief Mr. Guerrieri and COL O'Brien at such time as he preferred. No higher or other JCS representatives would be briefed unless it was decided to be necessary after the initial briefing. Mr. Guerrieri will contact DAMI-DOH to arrange for a briefing.

REMARKS Telephone conversation w/ Mr Heiss, MIIA-50

HDC corporate HQs has moved from Connecticut Ave, Nash, DC to 2800 Powder Mill Rd, Adelphi, Md in the past 6 months but still retains an office in the former location. The Woodbridge Research Facility, HDC, is on Dawson Beach Rd, Woodbridge, Va. The ICIP CENTRIC RID covers all locations to some degree.

The Memo to the undersecretary should have identified the Woodbridge Research Facility and not just HDC in paragraph 1.

ACTION REQUIRED

To obtain approval of the quarterly ICIP report

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) Background: By memorandum dated 8 February 1972 (TAB B), the Under Secretary of the Army requested that the VCSA provide a quarterly report on all ICIP operations.

2. (U) Discussion:

a. (U) During the past quarter, the ICIP OPLAN at Fort Ritchie, MD was revised to reflect target area realignment resulting from the reorganization of the US Army Communications Command. The ACSI approved the revised OPLAN on 15 Sep 75.

b. (U) The Commander, USASA approved an Operation Plan in July 1975 for an ICIP under the purview of DCSI, USAREUR and 66th MI Group at the Augsburg Field Station, USASA, FRG. A separate staff action directs a message from the Acting Director of Operations, OACSI to DCSI, USAREUR to furnish the Operations Plan for this ICIP for ACSI validation. Information regarding this new ICIP is not included in the attached quarterly report.

3. (U) Recommendation: That the memorandum at TAB A be approved and signed.

DAMI-DOH

MEMORANDUM THRU: ~~VICE CHIEF OF STAFF, UNITED STATES ARMY~~

FOR: ~~UNDER SECRETARY OF THE ARMY~~ Noted by USA 8 DEC 1975

SUBJECT: Internal Counterintelligence Program (ICIP) (U)
INFORMATION MEMORANDUM

1. (C) During the past quarter, five of the ongoing operations provided information which served to enhance the security at the facilities concerned. Personnel participating in ICIP operations at Harry Diamond Laboratories, Virginia, and Fort Ritchie, Maryland, identified security hazards which required follow-up investigative action.

2. (C) With the revalidation of the ICIP at Aberdeen Proving Ground, Maryland in July 1975 for a period of six months, the total number of active ICIPs in CONUS was raised to nine. The ICIP OPLAN at Fort Ritchie, Maryland was revised on 15 September 1975 to reflect target area realignment resulting from the reorganization of the US Army Communications Command.

3. (U) Summaries of the nine on-going CONUS ICIP operations are inclosed.

1. (U) CANARY EFFORT: (OACSI Revalidation - 4 Feb 75)

a. Location: Fort Ritchie, MD

b. Confidential Source Utilization: Three confidential sources

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) At an undetermined time within the past year, the Pentagon Telecommunications Center (PTC) requested that the Joint Chiefs of Staff (JCS) Communications Center provide the PTC with a magnetic tape containing test messages recorded by the Burroughs D825 Automated Message Processing System, a system used by the JCS, in order for the PTC to devise a coding system which would provide compatibility between the PTC's IBM 360/50 System and the Burroughs System used by the JCS. The JCS Communications Center could not provide the test message tape because of technical factors. This led to the Telecommunications Directorate, Site R, Ft Ritchie, receiving the tasking for the test tape preparation. A number of innocuous, unclassified messages were prepared by the communications personnel at Site R on a 2,500 foot reel of magnetic tape, which was sent to the PTC, where, because the messages were unclassified, it lay in open storage, unsecured, for about six weeks. During the processing which followed to make the two systems compatible, it was discovered that the tape also contained fragments of highly sensitive, classified messages which had been picked up from residual magnetism on the drums or reels of the Burroughs equipment when the test messages were recorded. A source of this ICIP reported this information believing that a compromise could have occurred when the test tape was not secured. The information was reported to the Commander, US Army Communications Center Operations Command, who initiated an investigation of the incident which resulted in a change of security procedures for the handling/storage of computer tapes, reels, and discs. Since the PTC is a secure area in itself, it is believed that the information in question had not been compromised.

(2) During the reporting period, sources surfaced adverse suitability information on 47 individuals assigned to Fort Ritchie and the Alternate Joint Communications Center (AJCC), Site R. In the majority of instances, the adverse suitability information dealt with drug abuse. Information was brought to the attention of the ICIP Coordinator of the supported command. Individuals concerned are being monitored, and an investigation was requested on one individual.

e. Operational Status:

(1) The revised CANARY EFFORT Operations Plan which reflected target realignment resulting from reorganization of the USACC into the 7th Signal Command was approved by the ACSI on 15 September 1975. A request has been submitted for assignment of an additional Great Skills PCO to provide more adequate coverage of the increased target areas which have resulted from this reorganization.

(2) On 1 July 1975, CPT Richard E. Graff, Project Liaison Officer (PLO), CENSUS TIME, was introduced to COL Donald E. Clark, Commander, USACC Operations Command, at the AJCC, Site R. COL Clark had been previously briefed on the ICIP on 18 March 1975, but the purpose of this meeting was to acquaint COL Clark with the ICIP CENSUS TIME which is conducted at the Pentagon Telecommunications Center (PTC), prior to his assumption of command at the PTC. On 1 August 1975, the CENSUS TIME and CANARY EFFORT Project Liaison Officers briefed COL Clark at the USACC PTC on both of these ICIPs since both of them involve USACC Operations Command and its subordinate elements.

(3) On 18 August 1975, the CANARY EFFORT PLO and COL Stubblebine, Commander, 902d MI Group, visited the USACC East Coast Telecommunications Center (ECTC), Ft Detrick, MD, for a facility briefing, since the facility is now being covered in the revised CANARY EFFORT OPLAN. The introductory briefing on the ICIP was presented to LTC Jackie L. Manbeck, Commander, USACC ECTC, and CW2 George S. Trivett, OIC, Security Division, USACC ECTC. The CDR, 902d MI Group, and the PLO also made a courtesy visit to COL J. A. Pastore, CDR, Fort Detrick.

(4) On 27 August 1975, COL John S. Eberle, CDR, USACC Site R Telecommunications Center, was provided an introductory briefing on the ICIP CANARY EFFORT.

(5) On 18 September 1975, the Quarterly Progress Briefing was presented to the CDR, USACC Operations Command, COL Clark, at the USACC Operations Command, USACC PTC, Wash, DC, in conjunction with the CENSUS TIME Quarterly Progress Briefing because of the inter-relationships of both ICIPs.

(6) On 25 September 1975, the PLO presented the Quarterly Progress Briefing to the supported command with the following in attendance: COL Harold G. deMoya, CDR, Ft Ritchie; COL John S. Eberle, CDR, USACC Site R Telecommunications Center; COL John J. Plosay, Jr., Deputy CDR, Fort Ritchie, and ACSI&S, 7th Signal Command. All of the above officials expressed their appreciation and continued enthusiasm for the ICIP and made laudatory comments concerning the counterintelligence support rendered during the reporting period.

~~CONFIDENTIAL~~

2. CANINE PLATE: (OACSI Revalidation - 4 Feb 75)

a. Location: Seneca Army Depot (SAD) Romulus, NY

b. Confidential Source Utilization: None.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: None.

e. Operational Status: On 23 September 1973, COL Alden L. Cox, Commander, Seneca Army Depot, was given the ICIP Quarterly Progress Report which included the history of CANINE PLATE from its inception. COL Cox assumed command of Seneca Army Depot on 4 Sep 75 from recently promoted BG Alan A. Nord. With the PLO now having full, unescorted access to Directorate for Special Weapons and the Special Weapons Storage Area, the prime target area, source recruitment has increased with six (6) conventional sources being used. Additionally, initial assessment was made of one potential source. With the favorable attitude toward ICIP operations evinced by COL Cox it is anticipated that development of the operation will continue. COL Cox stated that he was happy with present state of the operation; he did caution that under no circumstances did he want any "flap" over the program.

~~CONFIDENTIAL~~

3. (C) CANTER RIDE: (OACSI Approval - 4 Mar 75)

a. Location: US Army Missile Command (USAMICOM), Redstone Arsenal, AL

b. Confidential Source Utilization: One

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) Source continues to provide substantial information concerning eight of the persons who were subjects of the allegations which led to the request for the operation. Although Source has been unable to absolutely confirm or refute the allegations made, he has been able to develop associations with all of the individuals involved, to include being invited to social functions at which these persons were in attendance. Fragmentary information provided thus far has caused reason to doubt certain of the allegations, but investigation continues and further information will be reported as received.

(2) Source continues to monitor the security posture of the target area, reporting security infractions, hazards and weaknesses as they occur. Source has reported a renewed practice of poor housekeeping, and a continued lack of compartmentation, lack of control of production facilities, absence of control of hand baggage brought into and out of the target area, and possible compromise of the present badge system due to loss and improper exposure off-post. In an attempt to contribute to the security posture of the target area, Source, in his official capacity as the Administrative Technical Assistant to the Director, Advance Sensors Directorate (ASD), has created and published a complete guide to current security regulations and policies. Copies of the publication were distributed throughout ASD with specific distribution to those persons involved with the storage, creation, or control of classified defense information.

(3) Source is attempting to monitor the duty-hours activities of an individual of Jordanian birth presently employed in ASD as a DAC. This employee appears to be of possible CI interest because of his alleged enthusiastic involvement with other Arabic linguists and his reported recurring trips to New York City, ostensibly for the purpose of purchasing items for his off-duty business interests.

e. Operational Status:

(1) COL Arthur G. Lange, Jr., Chief of Staff, USAMICOM, was briefed on the information provided by Source during the 25-26 June meetings on

REGRADED UNCLASSIFIED

AUTH PARA 1-603 DoD 5200.1-R

~~CONFIDENTIAL~~

18 July 1975 by the PLO and on information provided during the 6-7 August meetings on 22 Aug 75 by the PLO. Information provided during the 17-18 September meetings will be provided to COL Lange during the next reporting period. COL Lange expressed his appreciation for the information provided, noted the security weaknesses developed, and indicated that he would examine ways to improve the security posture of USAMICOM. COL Lange was cautioned that corrective actions must be taken in such a manner as to protect the Source.

(2) COL Axelson, former Deputy Director, US Army Missile Research, Development and Experimental Laboratory (USAMRDEL), retired on 31 Jul 75 and was replaced by COL William P. Gojsza on 2 Sep 75. The PLO briefed COL Gojsza on the background of the operation and the individuals involved on 25 Sep 75. MG Vincent H. Ellis, USAMICOM Commander, was succeeded by MG George E. Turnmeyer on 1 Oct 75. The PLO will brief MG Turnmeyer on the ICIP during the next reporting period after coordination has been conducted with COL Lange, CofS, USAMICOM.

4. (U) CANVAS TAX: (OACSI Revalidation - 4 Feb 75)

a. Location: Sierra Army Depot (SIAD), US Army Materiel Command, Herlong, CA

b. Confidential Source Utilization: One

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: None

e. Operational Status: One confidential source was recruited during the reporting period. In addition, three conventional sources are currently being used to provide coverage in the target area. The quarterly progress report to SIAD officials has been delayed until 28 October by the direction of the Commander, 525th MI Group. The Commander, SIAD, continues to be interested in suitability information especially about the illegal use of drugs among SIAD personnel and has requested the Project Liaison Officer to continue to emphasize such requirements to Sources. In addition, the commander was provided support to augment depot security during exercise Golden Gloves which terminated 29 September 1975.

5. (C) CENSUS TIME: (OACSI Revalidation - 4 Feb 75)

a. Location: Pentagon Telecommunications Center (PTC), US Army Communications Command (USACC), The Pentagon, Washington, DC

b. Confidential Source Utilization: One

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: The Commander, PTC, has reassigned the civilian employee reported in the Fourth Quarter FY 1975 Quarterly Report as having questionable suitability characteristics and conduct to a new job within PTC requiring minimum contact with classified information. Supervisors will continue to monitor his conduct and activities. An Army NCO assigned to PTC attempted to commit suicide by slashing his wrists. The NCO reportedly did so in a moment of deep despair and depression over personal and financial problems. Local police officers, investigating the suicide attempt, reported that the NCO denied being in financial straits and produced his wallet for the officer showing him about $2,000.00 in $100 denominations. The investigating officer observed a screen in the NCO's apartment, of the type believed to be used by marijuana dealers. All information regarding the incident was provided PTC. The NCO's access has been suspended and the Security Officer of PTC has requested that a limited investigation be conducted.

e. Operational Status:

(1) On 18 July 1975, COL Donald E. Clark assumed command of PTC. COL Clark formerly had been at Site R, Ft Ritchie, one of the primary targets of the ICIP CANARY EFFORT. In his initial briefing on CENSUS TIME on 1 August 1975, COL Clark indicated to LTC Chad B. White, CDR, PCF/NCR Field Office, 902d MI Gp, that he desired to have an evaluation of the current security posture of PTC. During the period 8-12 August 1975, a courtesy Security Vulnerability Analysis (SVA) was conducted and provided the supported command.

(2) During the reporting period, PTC was directed by its higher headquarters to comply with Army Regulation 50-5, Human Reliability Program, in conjunction with their storing of two-man control items. The PTC Security Manager requested implementation assistance from the PLO. The PLO, by means of liaison with the US Army Nuclear and Chemical Surety Group, Fort Belvoir, VA, provided PTC with the requested direction and guidance.

6. (U) CENTAVO KID: (OACSI Revalidation - 4 Feb 75)

a. Location: Harry Diamond Laboratories (HDL), Washington, DC

b. Confidential Source Utilization: None

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) During the reporting period no additional information was developed since the previous quarter concerning the visits of the First Secretary, USSR Embassy, Washington, DC to meetings of the Institute of Electrical and Electronics Engineers, a professional society for engineers, which were held in the HDL auditorium. COL Einsel, Commander, HDL, made a determination that the society could no longer hold meetings at HDL in order to preclude any potential security threat and any potential for a repeat of the incident.

(2) The Security Officer, HDL, took several actions in response to recommendations contained in the Courtesy Security Inspection report submitted during the last quarter. These included a pilot 100% inventory of SECRET material to determine feasibility of a complete inventory at HDL, guard force personnel were shifted to new areas and security routines were considerably tightened because of laxness; a study was completed or possible new badges for HDL and security lectures were presented.

(3) On 5 and 17 September 1975, unidentified light aircraft flew over the test site, Woodbridge Research Facility (WRF), HDL, where a series of tests on foreign equipment under the ROUGE-EMORY program was in progress. In both instances the aircraft circled over the ROUGE-EMORY test site for about 5-7 minutes. During the years WRF has been at its present location no known overflights of this type have been reported. The overflights are being investigated in coordination with the FBI.

(4) On 8 Aug 75 a civilian employee, HDL, was referred to the PLO by the FBI. The employee claimed that she was being followed by members of the HDL Security Office, who were involved with a homosexual group at the Van Ness Avenues Facility, HDL. She named a number of persons at HDL as being involved in the group. After investigating her story the Commander, HDL, believed that she is suffering from psychiatric problems. The Commander plans to have employee visit a psychiatrist for a complete evaluation.

e. Operational Status:

(1) A final decision has not been reached by the Secretary of the Army on the creation of the Harry Diamond Developmental Center, a decision

REGRADED UNCLASSIFIED
ON SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

had been expected by the middle of September 1975. Criticism by a state congressional delegation to the move, which would result in the loss of 1200 jobs in the state, has delayed a final decision.

(2) On 17 September 1975, COL Thomas McGregor, Commander, HDL, who replaced COL Einsel, MAJ Kenneth F. Keller, HDL, and Mr. James F. Yeick, Security Officer, HDL were briefed on the quarterly progress of the ICIP. COL McGregory, an MI Officer showed considerable interest in the ICIP. It is expected that the excellent attitude toward the program that was shown by COL Einsel will be continued by COL McGregor.

~~CONFIDENTIAL~~

7. GONDOLA STAR: (OACSI Revalidation - 11 Jul 75)

a. Location: Aberdeen Proving Ground (APG), Aberdeen, MD

b. Confidential Source Utilization: Eight confidential sources

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) Sources reported that on 13 August 1975, an unknown number of Swedish citizens visited the US Army Ballistic Research Laboratories (BRL) The PLO determined that the visit had been fully coordinated with the proper officials. A Source reported on 26 September 1975 that seven Swedish citizens visited the US Army Materiel Systems Analysis Activity (AMSAA), APG. The PLO determined that the visit had not been properly coordinated, but that AMSAA had taken steps to insure that the visitors would not be given access to classified information until guidance was provided by HQ, US Army Materiel Command (AMC).

(2) Sources reported three instances of foreign travel during the period. A civilian pharmacologist employed at the Biomedical Laboratory, Edgewood Arsenal, attended the Sixth Congress of the International Union of Pharmacologists (IUPHAR) in Helsinki, Finland, held from 20 to 25 July 1975 and attended a luncheon during the Congress hosted by a representative of the USSR. After the Congress, the employee took part in a five-day tour to Leningrad, USSR, sponsored by IUPHAR. This information is being exploited as a DOMEX lead. In another instance, a civilian employee of the Development and Engineering Directorate, Edgewood Arsenal, visited Poland and Czechoslovakia for about one month in June and July 1975. The employee and his spouse allegedly visited relatives in both countries. The employee will be debriefed by USAINTA. In the third instance, a civilian employee of the Human Engineering Laboratory (HEL), APG, planned to take part in a National Geographic Society tour of the USSR in October 1975. The employee will be debriefed by USAINTA after his return.

(3) A source reported three instances of alien enlistees who were assigned to the Human Engineering Laboratory (HEL), APG. Follow-up action by the PLO determined that the Installation Intelligence Officer was aware of the status of the three, that they did not have security clearances and had no access to classified information. In the case of one of the enlistees who allegedly suffers from periods of amnesia, action was taken to deny him a security clearance.

REGRADED UNCLASSIFIED
ON SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

CONFIDENTIAL

(4) Source reported three instances of civilian employees of Edgewood Arsenal and one employee of AMSAA, APG, who allegedly engaged in extramarital affairs with other civilian employees. The situations are being discreetly monitored to determine if there is any substance to the allegations before investigations are conducted. An official source reported that an Army officer assigned to AMSAA was allegedly an alcoholic, was cohabitating with a female secretary of AMSAA and had engaged in sexual relations with an Israeli female captain assigned to act as the officer's interpreter during an Oct 74 TDY trip to Israel. Follow-up action disclosed that the officer had been transferred to the US Army Concepts Analysis Agency. A Summary of Information has been prepared and will be forwarded to that Agency. A source reported that a physical scientist employed in the Chemical Laboratory, Edgewood Arsenal, displayed indications of mental and emotional instability. Follow-up by the PLO revealed that the employee had been directed to undergo a "fitness for duty" physical examination which includes a psychiatric evaluation.

(5) An official source reported to the PLO rumors that a civilian employee of the BRL, APG, was involved in difficulties with the police. Follow-up revealed that the Havre de Grace Police Department, Havre de Grace, MD has seven charges on file against the employee ranging from possession of marijuana to grand larceny and assault and battery. The employee is absent without leave. An investigation for suitability of the employee is underway.

(6) A source reported that a high ranking civilian employee of the Human Engineering Laboratory (HEL), APG, brought his eight-year old son in a controlled access area where a classified test was being conducted and remained overnight. The incident was reported to the APG Security Officer and the employee was admonished and counselled by his supervisor. The same source reported that within the HEL classified reports were being typed on one-time typewriter ribbons and carbon that were not being handled as classified waste. The Security Officer, HEL, has stopped the practice and these items are now being disposed of with the classified waste. Another source reported ten separate situations at AMSAA which constituted security hazards or violations. Brought to the attention of the AMSAA Security Officer, all have been corrected.

e. Operational Status:

(1) Following revalidation of the ICIP on 11 July 1975, both the PLO and the PCO concentrated their efforts on reactivating and expanding the ICIP. During the latter half of July, the six confidential sources which had been used previously were recontacted and reactivated, one CIRL whose

REGRADED UNCLASSIFIED
ON SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

400

~~CONFIDENTIAL~~

recruitment had been postponed when the project was suspended was recruited on 5 Aug 75; a Source Lead Development Report on another CIRL was approved and this source was recruited on 4 Sep 75. These two sources were the first ones recruited in the US Army Materiel Systems Analysis Activity (AMSAA), a critical sensitive activity at APG. The PLO reestablished liaison contacts with local, state, and federal agencies in addition to maintenance of contacts with ICIP coordinators and security officers of those activities receiving ICIP support at APG. The PLO also established new casual sources in critical areas of the ICIP-supported activities at APG and vetted two new CIRLS who are under initial assessment.

(2) On 22 Aug 75, COL Kenneth L. Stahl, CDR, Edgewood Arsenal, was provided an up-date briefing by the PLO on the status of the ICIP and informed that the ICIP would require revalidation in six months. COL Stahl named CPT Vincent J. Falconio, Security Officer, Edgewood Arsenal, as the new ICIP Coordinator and requested that he be given the initial ICIP briefing. CPT Falconio was given the initial ICIP briefing and a status report on GONDOLA STAR on 22 Aug 75. COL Stahl advised that COL Burt Dall had been assigned as Deputy Commander, Edgewood Arsenal, and requested that COL Dall be given a briefing.

(3) On 17 September 1975, presented the initial ICIP briefing to COL Dall. In the absence of COL Stahl, who was on leave, COL Dall and CPT Falconio, Edgewood Arsenal Security Officer, were also given the Quarterly Progress Briefing on 17 September 1975.

(4) The PLO presented the Quarterly Progress Briefing to COL Alvin D. Ungerleider, Commander, APG; and Mr. Harry A. Mencke, Installation Intelligence Officer, APG. Both COL Stahl and COL Ungerleider expressed their pleasure that the GONDOLA STAR ICIP had been reinstated by the ACSI for an additional six months.

8. (U) LENS HOLDER: (OACSI Revalidated - 4 Feb 75)

a. Location: White Sands Missile Range (WSMR), NM

b. Confidential Source Utilization: Two confidential sources were utilized during the reporting period.

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: None

e. Operational Status: One additional confidential source was recruited during the reporting period and one individual is presently under assessment as a potential confidential source. On 30 September 1975, the Project Liaison Officer presented the Quarterly Progress Report to MG O. L. Tobiason, Commanding General, WSMR. The following personnel were also present at the briefing: LTC Charles I. Davis, Chief, Security Office, WSMR; LTC Arthur D. McQueen, Operations Officer, 525th MI Gp, CPT Marcel Hull, SAIC, Ft Bliss Resident Office, 525th MI Gp and GS-13 William F. Arket, Chief Intelligence Division, WSMR. Since MG Tobiason was unfamiliar with the Internal Counterintelligence Program (ICIP), the ICIP was explained in detail from its initiation to the present at WSMR. MG Tobiason was pleased with the ICIP LENS HOLDER.

9. (U) LENTIL MONKEY: (OACSI Revalidation - 4 Feb 75)

a. Location: Defense Language Institute (DLI), Presidio of Monterey, CA

b. Confidential Source Utilization: Eight (8) confidential sources

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) The temporary instructor in the Chinese-Mandarin Department, previously reported in the 4th Quarter, FY 75 Quarterly Report, who questioned her students about their future duties and expressed her displeasure at teaching Chinese to students to enable them to spy on the People's Republic of China, submitted her resignation on 4 September 1975. Her last working day was 5 September and she departed the Presidio of Monterey area.

(2) The instructor in the German Language Department, previously reported in the 4th Quarter, FY 75 Quarterly Report, who travelled to East Germany without notifying the DLI Security Officer, has been officially admonished by the Chairman of the German Language Department. She was advised that any future disobedience of DLI Regulations will be punished with a 10 day suspension in accordance with Civil Service Regulations.

(3) An ICIP source developed information that an instructor in the Russian Language Department is a former member of the Soviet Army's equivalent to the US Army Security Agency and that he had received special training in the English language while in the Soviet Army. This individual left the Soviet Union in Apr 74 and was hired at DLI in Oct 74. This instructor was recently joined by a former coworker in the Soviet Union. The new instructor left the Soviet Union in Apr 75 and was hired at DLI in Jul 75. These two individuals taught together at the Leningrad Herzen Pedagogical Institute in Leningrad, USSR in the late 1960s and early 1970s. Messages of inquiry concerning these individuals were sent to USAREUR and a request was sent to the 525th MI Group to conduct discreet checks on the first individual and the Civilian Personnel Office, DLI, submitted a NAC request on the second individual.

e. Operational Status:

(1) During the reporting period three sources were terminated due to their graduation and five sources were recruited. Four students and a

~~CONFIDENTIAL~~

Technical Language Assistant are presently being assessed.

(2) On 5 Sep 75, COL Samuel L. Stapleton, who replaced COL Koenig as Commandant of DLI, received his first Quarterly Briefing on ICIP LENTIL MONKEY. As a result of the briefing, COL Stapleton directed his security officer to prepare a videotape security lecture to be given to all students on their arrival at DLI. COL Stapleton further directed his security officer to closely coordinate the videotape with the Project Liaison Officer in order to insure coverage of all aspects of the security situation at DLI and to determine the most expeditious was to obtain background investigation for all instructors who have not previously had such investigations. The Security Officer was instructed to investigate the possibilities of having bring-up investigations conducted on previously checked instructors; in addition, he is to coordinate with the Civilian Personnel Office to initiate procedures whereby the hiring of new instructors would be contingent on their receiving favorable security checks. In attendance with COL Stapleton at the Quarterly Briefing was MAJ Richard A. Erickson, Security Officer, DLI.

(3) On 5 Sep 75, subsequent to the Quarterly Briefing, a visit was made to DLI by USAINTA personnel concerning the ICIP. The purpose of the visit was to acquaint the incoming DLI Commandant with some of the potential security problems at DLI which have arisen in the past from the varied, foreign backgrounds of the instructors and the fact that the students are destined for intelligence assignments. The Commandant indicated that he believed the ICIP would prove to be a valuable adjunct to the DLI security program and that he would support the program wholeheartedly. Key personnel in attendance were COL Stapleton; COL William F. Strobridge, CDR, 525th MI Group; LTC Grimes, CDR, Special Operations Detachment, USAINTA; MAJ Richard A. Erickson, Security Officer, DLI; and Mr. Jeremy H. Hughes, PLO.

SUBJECT: Quarterly Reporting of Internal Counterintelligence Program (ICIP) Operations (U)

HQDA (DAMI-DOI-C/MAJ EBERSOLE)
WASH DC 20310

1. (U) During September 1975, at the Woodbridge Research Facility (WRF), Harry Diamond Laboratories, personnel conducted a series of classified tests on foreign equipment under the ROUGE-EMORY Program. Since HDL is supported by the ICIP CENTAVO KID, the Project Liaison Officer (PLO) provided assistance to WRF to determine times when the air space over WRF would be free of satellites. The storage area was checked for security and the PLO made several suggestions concerning the camouflaging of the test material while it was in the open. WRF adopted the suggestions. On 5 September, a light aircraft identified only as a Piper Cherokee 140, flew over the test site at which the ROUGE-EMORY material was located, circling and hovering over the site from 5-7 minutes. On 17 September, an unidentified light aircraft again flew over the WRF, particularly circling over the area where the ROUGE-EMORY test equipment had been set up previously. Light aircraft normally avoid the WRF because of the numerous antennas and towers at the Facility. During the time WRF has been at its present location, no known overflights of this type have been reported. The overflights are being investigated in coordination with the FBI.

2. (U) The ICIP providing support to activities located at Edgewood Arsenal and Aberdeen Proving Ground was reactivated during the reporting period as a result of revalidation action by the OACSI on 11 July 1975, raising the total number of active ICIPs in CONUS to nine. The ICIP OPLAN at Fort Ritchie was revised on 15 September to reflect target area realignment resulting from reorganization of the US Army Communications Command (USACC).

3. (U) USAINTA is monitoring an ICIP started on about 1 July 1975 at the Army Security Agency (ASA) Augsberg Field Station, Federal Republic of Germany. USAINTA reviewed the operations plan for the ICIP, coordinated

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) Operation

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 11 September 1975

ACTION REQUIRED: CANARY EFFORT (U)
To furnish ACSI, DA approval of subject OPLAN to CDR, USAINTA.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) BACKGROUND: By letter dated 9 September 1975, subject as above (TAB B), the Director of Operations, USAINTA (MIIA-GPC-SO) forwarded to OACSI (DAMI-DOH) for review and approval, a revised operations plan for CANARY EFFORT (U) which provides for continuation of the existing ICIP at Fort Ritchie, Maryland. Revision of the existing OPLAN was necessitated by the reorganization and redesignation of the US Army Communications Command (USACC) - CONUS as the 7th Signal Command effective 1 July 1975.

2. (U) DISCUSSION:

a. Major changes in the revised OPLAN are as follows:

(1) Realignment of target areas and increased coverage to the Telecommunications Directorate, the Alternate Joint Command Center (AJCC), the Alternate National Military Command Center (ANMCC), the Alternate National Command Center Support Directorate (ANMCCSD), and the East Coast Telecommunications Center (ECTC). All are considered priority I for the purposes of counterintelligence support. The ECTC is located at Fort Detrick and the other activities are all at Fort Ritchie.

(2) The Execution Phase of the revised OPLAN remains essentially unchanged except for the addition of a Project Case Officer (PCO) at Fort Detrick to assist in providing coverage for the ECTC.

(3) The OPLAN provides that each source and individual involved in the conduct and control of the operation will sign a certificate stating that he has been briefed and understands the provisions and constraints imposed by AR 380-13.

b. There is no significant change in the objectives of the OPLAN.

3. (U) RECOMMENDATION: That the ACSI approve the revised OPLAN and sign the 1st Indorsement to the USAINTA letter at TAB A.

MI1A-GPC-SO(SA)

SUBJECT: Internal Counterintelligence Program (ICIP) Operation CANARY EFFORT (U)

HQDA (DAMI-DOI-C/LTC HAENDLE)
WASH DC 20310

1. (U) The 1 July 1975 reorganization and redesignation of the US Army Communications Command (USACC) - CONUS as the 7th Signal Command resulted in a realignment of target areas of the ICIP CANARY EFFORT (U) at Fort Ritchie, Maryland. Attached as inclosure 1 is a revised operations plan for CANARY EFFORT (U) which provides for continuation of the existing ICIP and reflects the changes brought about by this reorganization.

2. (U) The new 7th Signal Command reorganization has necessitated a change in the mission of the ICIP to provide increased coverage for the Alternate Joint Command Center (AJCC) and those activities designated by the Commander, 7th Signal Command, as listed in paragraph 4, below, and Annex A. There is no significant change in the objectives. The activities listed in Annex A will be considered Priority I for purposes of counterintelligence support. The Execution Phase of the revised OPLAN remains essentially unchanged except that an additional PCO will have a base of operations at Fort Detrick, MD, to assist in providing coverage for the East Coast Telecommunications Center (ECTC), which is located at Fort Detrick. The revised OPLAN provides that each source and individual involved in the conduct or control of the operation will be thoroughly briefed on the provisions and constraints of AR 380-13 and additionally will be required to sign a certificate stating that they have been briefed and understand the limits imposed by AR 380-13.

3. (U) Four organizational charts which show the former and present command and staff organization by line charts of the 7th Signal Command are attached as inclosure 2. These charts illustrate the principal internal changes occurring as a result of the 1 July 1975 reorganization.

JUL 17 1975

MIIA-GPC-SO

SUBJECT: Quarterly Reporting of Internal Counterintelligence Program (ICIP) Operations (U)

HQDA (DAMI-DOI-C)
WASH DC 20310

1. (U) ~~(C)~~ Three incidents of counterintelligence interest involving Soviets or persons tentatively identified as Soviets were reported upon during the fourth quarter of FY 1975. One such report was that a First Secretary of the USSR Embassy visited an auditorium in the Harry Diamond Laboratories (HDL), on two occasions to attend evening meetings of the Institute of Electrical and Electronics Engineers, Inc., (IEEE), a professional society for engineers. The Soviet official attended one IEEE meeting, but was refused entrance to a second meeting. Although only unclassified matter is presented at these meetings, the potential security dangers are self evident. Details of the incident were reported to the FBI.

2. (U) ~~(C)~~ Two other incidents involving persons tentatively identified as Soviets occurred in the Fort Ritchie area. The first report, which was in April 1975, concerned an individual bearing a strong resemblance to a KGB member who paid an unusual amount of attention to a shipment of sensitive equipment destined for Fort Ritchie. The second incident concerned an individual assigned to Fort Ritchie who reported that a man representing himself as a contract employee attending a DOD-sponsored conference in Pennsylvania claimed extensive contact with Soviets in Hagerstown, MD. Although the latter incident occurred in 1974, because of the sensitivity of Ft Ritchie, both incidents have been reported to the FBI with a request for an investigation to include a determination if there is any relationship between the two incidents.

3. (U) ~~(C)~~ Correspondence was submitted on the ICIP GONDOLA STAR at Aberdeen Proving Ground which was reported in the 3d Qtr, FY 75, as scheduled for termination, requesting that the Operation be reconsidered for continuation. Excluding this ICIP, there were eight active ICIPS at the close of the reporting period.

MEMORANDUM THRU: VICE CHIEF OF STAFF, UNITED STATES ARMY

FOR: ~~UNDER SECRETARY OF THE ARMY~~ NOTED BY 24 SEP 1975 THE UNDER SECRETARY OF THE ARMY

SUBJECT: Internal Counterintelligence Program (ICIP) (U) -- INFORMATION MEMORANDUM

1. (U) During the past quarter, three incidents surfaced as a result of ICIP operations which involved known or suspected Soviets. One report concerned a USSR Embassy official who visited an auditorium at the Harry Diamond Laboratories on two occasions, to attend evening meetings of the Institute of Electrical and Electronics Engineers. The official attended one meeting, but was denied entrance on a second occasion. The other two incidents occurred in the Fort Ritchie, MD area. One concerned a report of an individual bearing a strong resemblance to a KGB member who was particularly concerned about a shipment of sensitive equipment destined for Fort Ritchie, while the other involved a man representing himself as a contract employee attending a DOD-sponsored conference in Pennsylvania, who claimed extensive contact with Soviets in Hagerstown, MD. All three incidents were reported to the FBI.

2. (U) In response to a request from the Commander, Aberdeen Proving Ground, MD, I have revalidated GONDOLA STAR for a six-month period. I plan to closely monitor the results of this operation, and will make a final determination in January 1976 as to whether or not it should continue.

3. (U) Summaries of the eight on-going ICIP operations are inclosed.

[redacted]

1. (C) CANARY EFFORT: (OACSI Revalidation - 4 Feb 75)

a. Location: Fort Ritchie, MD.

b. Confidential Source Utilization: Three confidential sources.

c. Information obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) Information was surfaced pertaining to the alleged abuse of drugs on the part of seven (7) individuals assigned sensitive/critical duties. Additionally, adverse suitability information concerning nine (9) individuals was reported. This information involved indebtedness, alcohol abuse, moral improprieties and mental instability. As a result of the information furnished, four individuals had their access to classified information suspended; investigations were requested on three individuals; and the activities of the other individuals are being monitored.

(2) Information was reported concerning an individual who resembled a suspected KGB member. The individual has paid an inordinate degree of attention to the activities of a US civilian firm and a sensitive shipment destined for Fort Ritchie. Another individual reported conversations that occurred in August 1974 in a bar in Waynesboro, PA where he learned that an individual believed to be a contract employee claimed to have had contacts with Soviets who worked in Hagerstown, MD. Both incidents were reported to the FBI with a request for investigation.

e. Operational Status:

(1) On 25 June 1975, the PLO briefed COL Harold G. deMoya, Cdr, Fort Ritchie, and COL John J. Plosay, Jr., Deputy Cdr, Fort Ritchie.

(2) COL Donald E. Clark assumed command of the 7th Signal Command (which includes the Pentagon Telecommunications Center) on 18 July 1975 and was briefed on CANARY EFFORT. The 902d MI Group which is conducting the ICIP at Fort Ritchie prepared a revised operations plan reflecting changes in mission and target areas which resulted from the reorganization of the US Army Communications Command (USACC) into the 7th Signal Command. Prior to the reorganization the Telecommunications Directorate, located at Site "R" and the primary target for the ICIP, was under the operational control of the Cdr, Fort Ritchie. Under the new organization, the Telecommunications Directorate, as well as the telecommunications centers throughout CONUS, are under the operational control of a new established activity, the USACC Operations Command.

2. ~~(S)~~ CANINE PLATE: (OACSI Revalidation - 4 Feb 75)

a. Location: Seneca Army Depot (SAD), Romulus, NY

b. Confidential Source Utilization: None.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: None.

e. Operational Status: On 6 May 1975, COL Alan A. Nord, recently assigned as Commander, Seneca Army Depot, was provided an initial briefing on the ICIP Operation CANINE PLATE (U). COL Nord stated that he favored the expansion of the Operation and the PLO should be allowed full, unescorted access to the Directorate for Special Weapons and the Special Weapons Storage Area. The last change would permit spotting and assessing potential sources in areas not open previously to the PLO except by peripheral contact. During the reporting period, contact was made with four conventional sources. Additionally, initial assessments were made of two potential sources, one in the Transportation Division and one in the Directorate for Quality Assurance. The PLO has been involved with providing informal counterintelligence assistance to the Military Police Company responsible for the physical security of SAD. Since the initial briefing on the ICIP was presented to the Commander on 6 May 75, a subsequent Quarterly Progress Report was not given. With the expanded latitude and favorable attitude toward ICIP operations evinced by COL Nord it is anticipated that development of the operation will be accelerated.

3. (C) CANTER RIDE: (OACSI Approval - 4 Mar 75)

a. Location: US Army Missile Command (USAMICOM), Redstone Arsenal, AL

b. Confidential Source Utilization: One.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: The ICIP confidential source provided substantial information on security weaknesses within the supported command to include poor housekeeping practice, lack of control of reproduction facilities, lack of proper control of area access, lax security attitudes and possible compromise of security badges through continued loss. As a result of the information provided by the source, the Director, US Army Missile RD&E Lab, directed that poor housekeeping practices be corrected prior to 1 July 1975 subject to his personal inspection. Source will continue to monitor the security posture of the target area. Additional information has been obtained on the personalities involved in the previous investigation under provisions of AR 15-6 which led to the initiation of the operation for the insertion of a Confidential Source into the target area. Information provided has resulted in the initiation of credit checks and local agency checks to confirm or refute allegations.

e. Operational Status: On 16 April 1975, confidential source, a Military Intelligence warrant officer was inserted into the target area as an administrative officer. This source appears to be very well received within the target area and has provided substantial information to include information noted in paragraph 1d above. His outgoing, friendly manner coupled with his professional intelligence background will increase the potential of the ICIP operation. COL Arthur G. Lange, Jr., Chief of Staff, USAMICOM, was briefed on the implementation of the operation on 7 April 1975. He was subsequently briefed on 9 June and will be briefed subsequent to each meeting with the confidential source. The briefing given COL Lange after each meeting with the confidential source will be given in lieu of the Quarterly Progress Briefing since this will keep USAMICOM informed of the progress of the operation on a more current basis than would be the case if briefing were confined to Quarterly Progress Reports. The PLO's briefing was well received by COL Lange, who indicated that he would inform MG Ellis.

4. (24) (C) CANVAS TAX: (OACSI Revalidation - 4 Feb 75)

a. Location: Sierra Army Depot (SIAD), US Army Materiel Command, Herlong, CA

b. Confidential Source Utilization: None.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: None.

e. Operational Status: Four conventional sources are currently being used to provide coverage in the Priority I Targets which are Exclusion Area I, Storage Area for Special Weapons; and Exclusion Area II, Maintenance and Calibration Facilities for Special Weapons. Recruitment of one confidential source is pending and a second potential source in Exclusion Area II is undergoing initial assessment. The Quarterly Progress Report was presented by the PIO on 3 July 1975 to the following SIAD officials: COL Robert Hawlk, Commander, SIAD; LTC Bernard Render, Dep CDR, SIAD; MAJ John Jolley, Provost Marshal/ Security Officer, SIAD; CPT Wayne Herringer, Intelligence Officer, SIAD; and Mr. Anthony Tornabene, Asst Intelligence Officer, SIAD. The Commander, SIAD, requested that the PIO brief him on the nature of the EEI levied on sources in the ICIP. The Commander indicated that he is interested in determining if the remoteness of the area and the type of duty has any bearing or influence on the number of suitability cases among SIAD personnel. The Commander feels that there may be a number of suitability cases among his present personnel involving such factors as sexual promiscuity, alcohol or drug abuse, or excessive indebtedness. By identifying these individuals, the Commander will strive to reduce personnel problems at SIAD. COL Hawlk indicated that he was satisfied with the progress being made in efforts to develop the ICIP and make it a more viable operation.

5. (C) CENSUS TIME: (OACSI Revalidation - 4 Feb 75)

a. Location: Pentagon Telecommunications Center (PTC), US Army Communications Command (USACC), The Pentagon, Washington, DC

b. Confidential Source Utilization: One.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: An ICIP source reported that a PTC civilian employee's effeminate gestures and high pitched voice were responsible for office gossip that the employee was a homosexual. The employee, who is currently employed as a relay operator, was transferred from the coding and decoding section because he allegedly coded an obscene message that was to be sent to an overseas user. The ICIP source provided other information concerning possible security violations involving the employee. The employee's dossier was examined and it was noted that during a background investigation conducted approximately ten months ago, there were recommendations that the employee not be considered for positions of trust and responsibility. Investigative efforts are continuing to verify or refute allegations concerning the employee.

e. Operational Status: The reorganization of the US Army Communications Command at Ft Ritchie into the 7th Signal Command has had an effect on the operational status at the PTC. COL Clark, who has a positive attitude toward the ICIP assumed command of PTC in July, and was given a full progress report of this operation. All personalities in the operation have changed. In addition to the new commander who is amiable to the program, there is a new security manager, CPT Richard Pederson, who gave the program support previously when he was assigned to the Defense Language Institute, East Coast, Washington, DC. A new PLO has also been assigned to the operation. With the above personnel changes and COL Clark's encouraging attitude, this ICIP is now afforded an excellent opportunity to expand and be more productive.

6. (U) CENTAVO KID: (OACSI Revalidation - 4 Feb 75)

a. Location: Harry Diamond Laboratories (HDL), Washington, DC.

b. Confidential Source Utilization: None.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians - None.

d. Useful Information Obtained:

(1) It was reported that a First Secretary at the USSR Embassy in Washington, DC had attended a meeting of the Institute of Electrical and Electronics Engineers, a professional society for engineers, which was held in the HDL auditorium. The subject matter presented during the evening was unclassified. When the Soviet official attempted to attend a second meeting of the society, he was denied entry. Both incidents were reported to the FBI. The Commander, HDL was advised that the use of the auditorium by outside groups would render it insecure until appropriate security checks were conducted.

(2) The PLO noted and called to the attention of the HDL Security Officer several minor security problems during the period. These were either corrected on the spot, or recommendations for correction were made.

e. Operational Status: The final report for the reorganization of HDL into the Harry Diamond Developmental Center (HDDC) was submitted to Congress and the Secretary of the Army. It was expected that the Secretary of the Army would make a final decision by September 1975. The consolidation of various electronics facilities under the control of HDDC will make HDDC the prime center for electronics research and development in Department of the Army. If approved, the consolidation at HDL would begin in October 1976. COL Einsel, Cdr, is scheduled to depart HDL about September 1975. His replacement will be COL Richard H. Sawyer, who is now serving as the Commander of the Watervliet Arsenal, Watervliet, New York. On 11 June 1975, COL Einsel, Cdr, HDL, and Mr. James F. Yeick, Security Officer, HDL, were briefed on the quarterly progress of the ICIP.

7. (U) LENS HOLDER: (OACSI Revalidation - 4 Feb 75)

a. Location: White Sands Missile Range (WSMR), NM.

b. Confidential Source Utilization: One confidential source was utilized during the reporting period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: The following information on WSMR personnel reported by the confidential source in this ICIP was reported to the Chief, Intelligence Division, WSMR, who took action as indicated:

(1) A report to the Security Officer, Army Missile Test and Evaluation (ARMTE) Directorate that an ARMTE employee frequently left his security container open and unattended resulted in a special briefing on WSMR Regulation 380-5 (Security Regulation) for all ARMTE employees who also were required to sign certificates that they understood the requirements of the security regulation.

(2) The civilian firm which contracts for security guards at WSMR permitted an enlisted man to work part-time as a guard in the Exclusion Area of TRASANA without having the proper security clearance for that area. The Security Office, WSMR, has now insured that the enlisted man has been processed for the proper clearance by the contractor.

(3) Reports of several instances of laxity on the part of TRASANA security guards at night and instances of classified material left in in/out boxes after duty hours. The Security Officer took immediate action upon receiving this information to re-orient guards and personnel on their security obligations. Source has reported a noticeable improvement in security since the earlier reports.

(4) Reports of an Army Officer assigned to the Office of Missile Electronics Warfare (OMEW) who allegedly was misappropriating computer and electronics equipment to build his own computer at home were passed in a Summary of Information to the Sixth Region US Army Criminal Investigation Division Command for action by that agency.

e. Operational Status: One confidential source was recruited early in the reporting period. A second confidential source is in the final stages of assessment in the Office of Missile Electronics Warfare. On 17 June 1975, the PLO presented the Quarterly Progress Report to MG R. J. Proudfoot, Commanding General, WSMR. The following personnel were also present at the briefing: COL William F. Strobridge, Cdr, 525th MI Group, LTC Charles I. Davis,

8. (U) LENTIL MONKEY: (OACSI Revalidation - 4 Feb 75)

a. Location: Defense Language Institute (DLI), Presidio of Monterey, CA.

b. Confidential Source Utilization: Six (6) confidential sources.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) A Source in the Chinese-Mandarin Language Department furnished information concerning a temporary instructor of that department who closely questioned her students about their knowledge of their future duties and expressed her displeasure at teaching Chinese to students to enable them to "spy" on the People's Republic of China. A DCII check, made to review the instructor's USAIRR Dossier, revealed no dossier in the files. The instructor who was born in Canton China and is a British citizen, will not have her employment contract with DLI renewed when it expires in September 1975.

(2) Information was reported concerning the travel of an instructor of the German Language Department to East Germany without the required notification to the DLI Security Officer. The DLI Security Officer plans to permit the instructor to perform the travel and upon return to DLI will question her concerning non-compliance with DLI regulations.

(3) A Technical Language Assistant in the Russian Language Department reported a visitor to that Department in late May. The visitor requested copies of training material used in the Russian Dept, claiming he wanted it for training purposes in his reserve unit. The visitor was given two training exercises which were unclassified and taken largely from Russian language periodicals. The visitor, who was told to return later because additional material was not readily available did not return. Sufficient identifying data was not obtained on the visitor but an attempt is being made to obtain fuller identification. As a result of the incident the Director DLI, at a staff meeting placed special emphasis on the responsibilities of all staff members to be alert for unauthorized visitors. In addition, visitor requirements and restrictions were published and distributed throughout DLI.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 30 July 1975

ACTION REQUIRED: To provide approval/disapproval to an operation plan.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) ~~(C)~~ BACKGROUND: Inclosure to TAB A is an operations plan for an ICIP submitted informally by the Pentagon Counterintelligence Force. The plan calls for an ICIP in the OACSI Communications Center.

2. (U) ~~(C)~~ DISCUSSION: While the OACSI Communications Section is a sensitive element of OACSI, it is extremely small and confined. Security would be difficult to maintain as evidenced by the fact that several individuals in the OACSI administrative office were aware of the proposed ICIP.

3. (U) RECOMMENDATION: That the proposed ICIP be disapproved and the memorandum at TAB A be signed and forwarded to the Commander, Pentagon Counterintelligence Force.

1 AUG 1975

DAMI-DOH

MEMORANDUM FOR: COMMANDER, PENTAGON COUNTERINTELLIGENCE FORCE

SUBJECT: Internal Counterintelligence Program (ICIP)(U)

1. (U) Subsequent to the submission of the inclosed operations plan, the entire ICIP was critically reviewed. The result of this review was the termination of operations at installations and facilities where degree of sensitivity of the facility, or the type information developed did not justify the expenditure of resources.

2. (U) (C) The OACSI Communications Section, while an extremely sensitive element of OACSI, is staffed primarily with senior NCO's and a number of civilians who have been employed in the same area for considerable periods of time. The number of personnel employed in the Communications Section is approximately 30, and these individuals man the area on a 24 hour basis. They process large volumes of mail and messages each month and there is considerable pressure exerted continually to insure correspondence handling is correct. Considering the size of this element, and the working conditions under which they operate, the security of an ICIP is doubtful. Further, the pressures and frustrations could be expected to increase if there were any indications of the existence of an ICIP.

3. (U) (C) The activities of this element have been examined, and other than the sensitivity of the facility, there is no indication as to why this element would be a more lucrative target for an ICIP than any other element in OACSI.

4. (U) The attached operations plan is not favorably considered because the target is not considered sufficiently appropriate for an ICIP.

1. (U) MISSION:

a. Requirement: The mission of the OACSI, Administrative Office, Communications Section is to process incoming and outgoing mail; provide mail pick-up and delivery; world wide attache pouch support via coordination with the State Department. The Communications Section also maintains a registered mail record; a TOP SECRET Control Office; and operates a NATO, SEATO and CENTO sub-registry. There are approximately twenty thousand messages per month up to and including collateral TOP SECRET handled by this section.

b. Objective: This operation will provide the ACSI with a concentrated, aggressive security service within the confines of the Pentagon Reservation, and will provide a fast factual reporting system of any imminence of activities which would necessitate immediate command action and possibly pose a direct threat to the security of OACSI Communications Section. In order to accomplish the objective of this operation, an effective and coordinated use of overt and covert counterintelligence sources and techniques will be implemented which are designed to detect, neutralize, and eliminate the following elements and factors which pose a direct threat to the security of the Communications Sections.

(1) Acts of espionage, sabotage, or subversion.

(2) Hostile foreign intelligence activities.

(3) Disloyalty, disaffection, and other threats to the security of OACSI.

(4) Character weakness, habits, or improper conduct which makes personnel assigned to the Communications Section vulnerable to coercion or blackmail.

(5) Acts of the Communications Section personnel affiliated with anti-Army dissident organizations which seek to disrupt the maintenance of good order, discipline, and morale within the Pentagon.

c. Base of Operations: Special Operations Section, Pentagon Counterintelligence Force/National Capital Region Field Office, 902d MI Group, Room BE 800, The Pentagon, Washington, DC 20310.

2 (U) ~~(C)~~ PERSONNEL:

a. Confidential Source Personnel: To be selected from personnel assigned to the Communications Section, OACSI.

b. US ARMY Intelligence Personnel: The following personnel of PCF/NCR FO will function in the capacities indicated:

(1) Project Officer: CPT Kenneth R. Schlag

(2) Project Control Officer (PCO): CW2 Shawn M. Sandlin

(3) Alternate PCO: CW2 Leonard NMN Gross

(4) Project Liaison Officer (PLO): CPT Kenneth R. Schlag

(5) Alternate PLO: SFC George E. Perry

3. (C) COVER AND DOCUMENTATION: (SEE ANNEX A)

REGRADED UNCLASSIFIED ON SEP - 5 1997 BY CDR USAINSCOM FOI/PO AUTH PARA 1-603 DoD 5200.1-R

429

CONFIDENTIAL

Page 1928 of 3957

a. The ICIP Project Officer and PLO will function in a completely overt manner. No attempt will be made to conceal their affiliation with military intelligence.

b. The PCO will employ shallow cover in his contacts with confidential sources. He will not disclaim affiliation with US Army Intelligence, since to do otherwise would alarm prospective sources.

4 (U) ~~(C)~~ EXECUTION:

a. Concept of Operations:

(1) The ICIP will be implemented by using the coordinated employment of overt liaison contacts and confidential source(s). Only confidential sources will be used in this operation due to the small size of the target area.

(2) A concerted effort will be exerted towards the collection of information concerning military personnel assigned to the Communications Section. Collection will not extend to non-DoD personnel. In the event any individual not affiliated with DoD is identified as posing a threat against the Cables Section, the provisions of reference h will apply and prompt coordination will be effected with the appropriate authority. Each individual and source involved in the conduct or control of the operation will be briefed on current policies and constraints pertaining to counterintelligence activities as they concern persons and organizations not affiliated with DoD, reference h.

(3) The PLO will be the point of contact between the ACSI and PCF. The PLO will present to the ACSI or his designated representative, a quarterly briefing on the progress of the operation. In the event the PLO receives information requiring immediate action by OACSI, the information will be released to the ACSI and the Commander, 902d MI Group. Such information will be sanitized or otherwise protected to insure continued operational viability and source utilization.

(4) Specific EEI to be pursued are:

(a) Determine the existance of espionage, sabotage, or subversion within the target or directed against the target.

(b) If espionage, sabotage, or subversion is known or suspected, identify the perpetrators, the nature and scope of their activities, their methods of operation, and the foreign or domestic organization controlling such activity.

(c) Determine the prevalence of dissident activity within the target area, identify military or civilian personnel involved, and resolve whether such activity is supported or directed by elements outside the OACSI.

REGRADED UNCLASSIFIED
ON SEP 5 1997

Page 1929 of 3957

~~CONFIDENTIAL~~

(d) Detect and report adverse suitability information, foreign contacts by Cables Branch military members, and other significant matters which may be exploited by hostile intelligence services.

a. The following activities and types of individuals will be subjected to continuous and intensive counterintelligence coverage:

(1) Known or suspected security risks.

(2) Persons who are known or suspected to associate with persons who are known or suspected members of hostile intelligence or subversive organizations.

c. Implementation:

(1) Overt Phase: The overt phase will begin immediately upon approval of this plan. Close liaison will be maintained with selected OACSI Staff and security personnel. The PLO will be primarily responsible for the spotting and assessment of prospective confidential sources. The spotting will be continuous throughout the operation so as to assure an adequate bank of prospective sources for possible covert utilization. The PLO will conduct the overt functions as necessary to include investigative activities and quarterly briefings concerning the status of the ICIP.

(2) Covert Phase: The covert phase will be the responsibility of the PCO with the assistance of the Alternate PCO. This phase will include the exploitation of confidential sources who have been recruited from among the military personnel. The PCO is also responsible for vetting, recruitment, targeting, training, and disposition of confidential sources. The objective of this phase will be the development of, timely reporting of credible information relating to the detection, neutralization, or exploitation of factors or individuals who pose a direct threat to the security of the Cables Branch, and thus the United States.

5. (U) ~~(C)~~ COMMUNICATIONS: (SEE ANNEX B)

a. Communications between the Project Officer and PCO/PLO will be conducted almost exclusively through personal meetings; telephone will serve as an alternate.

b. Primary communications with confidential sources will be through personal meetings at pre-selected safe sites in the Washington Metropolitan area, or the Pentagon.

c. Alternate means of communications with confidential sources will be via US Mail, using Post Office boxes in the Arlington, Virginia area. A Post Office box may also be used by the confidential source, if circumstances at his residence indicate a possibility of other persons gaining access to his personal mail.

REGRADED UNCLASSIFIED
ON SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

~~CONFIDENTIAL~~

Page 1930 of 3957

d. Emergency means of communications from confidential sources to PCO will be by telephone to an existing unlisted telephone number located in the office of the Special Operations Section, PCF/NCR. After duty hours, the confidential source will leave a message for the PCO at a telephone located in the PCF. This telephone is manned 24 hours a day, and night personne will be briefed concerning their actions should a source telephone and ask to speak to the PCO. The source will be asked to leave his name (cover name) and a telephone number where he may be reached. PCF night personnel will then immediately pass the information to the PCO, or if the PCO is unavailable the alternate PCO. From PCO to source, emergency communications will be by telephone call to sources home or office, as appropriate.

6. (U) ~~(C)~~ TRAINING:

Training of confidential sources will be continuing process and a portion of each meeting will be devoted to instruction. Emphasis will be placed on security of the operation and the source and reporting procedures. Observation and description, targeting, and related subjects based on source's role will also be included. Each indivudual and source involved in the conduct of the operation will be briefed on current policies and constraints pertaining to counterintelligence operations and activities as they concern persons and organizations not affiliated with DOD, Reference h. The training administered to source(s) will be in the quantity necessary to develop the maximum information from the target comensurate with the previous intelligence and experience of source(s).

7. ~~(C)~~ FINANCE AND LOGISTICS: (SEE ANNEX C)

b1

8. (U) ~~(C)~~ TERMINATION: (SEE ANNEX D)

a. Confidential sources recruited under this plan will be terminated when their usefulness to the plan ceases, when they show indicators of insecure security practices which would jeopardize the operation, are no longer amenable to control, or when the operation is terminated by proper authority. Circumstances under which termination is effected will determine whether termination is with or without prejudice.

b. The only commitments made to confidential sources employed in this operation will be assurance of personnel and job safety through anonymity, and of reimbursement of any legitimate expenses incurred during the operation.

Page 1931 of 3957

c. Knowledgeability of confidential sources will be limited to the following:

(1) Name and physical description of the PCO and Alternate PCO.

(2) Location of meeting sites as well as that of PCF.

(3) Means of alternate and emergency contact with PCO: Namely the Post Office Box number(s) and the telephone number(s) where PCO may be contacted in the event of an emergency.

(4) The approach method used by the PCO in his initial contact with confidential sources.

d. As a control factor, confidential sources will be required to sign a statement evidencing their willingness to cooperate and attesting to the fact that all facets of security will be strictly adhered to. This will not be construed to be a contractual agreement, but will be used as a physhological instrument to enhance the security of the operation.

e. Security considerations are contained in ANNEX E.

9. (U) ~~(C)~~ COORDINATION AND LIAISON:

Liaison with designated OACSI officials and other appropriate Pentagon Agencies will routinely be effected the PLO.

10. (U) REPORTING:

a. Formats for operational reports are contained in Chapter 5, Section III, USAINTC Regulation 381-100 (reference a.)

b. Production reports will be in Agent Report Format.

ANNEX B - Communication

1. (U) Communication:

a. Primary: The primary means of communication between the PCO and the source(s) will be personal meetings at selected safe sites in the Pentagon building or in the surrounding area of Northern Virginia or the District of Columbia. Personal meetings will be held to the absolute minimum consistent with operational requirements. Details of future meetings will be established at each meeting or through telephonic communication initiated by either the PCO or source(s) to previously exchanged telephone numbers.

b. Emergency: To establish an unscheduled meeting on a priority basis, Source will call the PCO through an unlisted commercial number on the PCF/NCR FO call director. Source(s) will identify himself through a pre-arranged code name (cover name) and ask to speak to the PCO. If the PCO is not in available at the time of the call, the message will be transmitted to the PCO by PCF personnel as soon as possible. The PCO, to establish an unscheduled meeting with source(s), will contact source(s) by a pre-established telephone number in conformance with source(s) work schedule or off duty habits.

ANNEX D - Termination

1. (U) (C) Termination of the operation: Termination will be accomplished based upon an objective evaluation of the effectiveness of continued utilization of source towards the accomplishment of the goals of this operation, with the final decision to terminate resting with OACSI, Department of the Army.

2. (U) (C) Termination of source(s) with prejudice: In the event source(s) violate basic security practices and are terminated for that reason, they will be prosecuted for violation of the appropriate statute or directive, should such an action be deemed feasible and advisable in connection with the nature of the violation and their activities in support of the operation. Should prosecution be inadvisable, source(s) will be required to execute a debriefing statement, and detailed instructions will be given regarding the possible consequences should they reveal their MI affiliations and activities.

3. (U) (C) Termination of source(s) without prejudice: Upon termination of this operation or at such time as source(s) are considered to be of no further value within the scope of this plan, and provided source(s) have committed no flagrant violations of security, they will be paid all outstanding reimbursable expenses incurred. A detailed security briefing concerning disclosure of information concerning their MI affiliations and activities will also be administered. If deemed advisable at the time of termination, source(s) may be presented a properly sanitized letter of commendation/appreciation or other appropriate recognition for their cooperation.

4. (U) (C) Commitments: No commitments other than those relating to reimbursement of legitimate operation expenses incurred during the course of the operation will be made. Source(s) will be given assurance of personal safety and protection of careers and reputations.

5. (U) (C) Knowledgeability: Source(s), during the course of the operation will be knowledgeable of the following:

a. PCO: by name and status as Special Agent, US Army Intelligence.

b. Facilities: Source(s) will not be routinely exposed to facilities housing PCF during the course of their covert activities. However, the existence of PCF is common knowledge throughout the Pentagon, and the likelihood that source(s) will, at a minimum, know the location of PCF is unavoidable.

c. Modus Operandi: Source(s) will be exposed to modus operandi only in direct relation to the requirement levied by the PCO.

d. Location of meeting sites.

e. Means of alternate and emergency contact with PCO: Post Office

ANNEX E - Security Considerations

1. (U) ~~(C)~~ The activities engaged in by individuals assigned to OACSI which may be considered to be disruptive of military operations, contrary to good order and discipline, and posing a threat to military security are unknown at this time. The number of military personnel engaged in activities relative to active and/or passive resistance to the military is also unknown.

a. The inter-relationship of military and civilian community in the National Capital area is such that it can be expected to present a degree of security risk in that confidential source(s) covert activities could be revealed through indiscretions on the part of source(s) in deviating from normal routine of activities normally associated with the work environment. This risk will be substantially limited by extensive training of source(s) in the areas of personal security and operational security. Further, close monitoring of all activities of source(s) for the purpose of determining the presence of or lack of derogatory security indicators will preclude unexpected security developments and will provide a means by which source(s) may be further trained, guided, and controlled in their activities.

b. Project Control Officer/Confidential Source relationship could be revealed inadvertently by the passive element of the military establishment, thus posing a threat to the security of the operation. This possibility will be reduced by close adherence to fundamentals of security in the conduct of personal meetings, telephone calls, and all other contacts between PCO and source(s).

2. (U) ~~(C)~~ In the event that either source(s) or this operation are compromised, USAINTA will not confirm the existence of such an operation, the employment of source(s), or interest in organizations/personalities involved in alleged subversive activities. Should source(s) be compromised PCO will immediately instruct source(s) to cease all operations; activity, and will debrief in detail concerning all aspects of the possible compromise. Based upon an evaluation of the situation, source(s) may be terminated and the operation may be suspended pending an analysis of the compromise and its ramifications. All sources so terminated will be administered the appropriate security debriefing.

3. (U) ~~(C)~~ Security measures must assure:

a. Strict need-to-know restructions concerning the existence of this operation and the methods by which it is implemented will be applied. A PCF Knowledgeability list will be maintained. (See ANNEX F)

b. Briefings on the existence of this operation will be given only to the ACSI or his designated representative.

ACTION SHEET

CONTROL NUMBER

Retention of Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOH
SUSPENSE:
DATE: 3 July 1975

ACTION REQUIRED
To respond to a request from the Commander, APG for continuation of ICIP.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) BACKGROUND: During the last quarter, calendar year 1974, the ACSI conducted a review of the ICIP, and based on the results of this review, he directed the termination of 12 of the 19 on-going operations. The operations terminated were those which were less productive or conducted at installations of lesser sensitivity. Among the operations terminated was GONDOLA STAR which had been conducted in the Aberdeen Proving Ground (APG)/Edgewood Arsenal (EA) area. At RED TAB B is a recommendation from the Commander, APG indorsed by the Commander, Test and Evaluation Command (TECOM) and the Commander, Army Materiel Command, that the ICIP be continued at APG/EA.

2. (U) DISCUSSION:

a. The APG request advises that they recognize information developed in GONDOLA STAR has been of limited CI value in the past, however, they consider even negative reporting to be significant. The TECOM indorsement emphasizes the probable significant increase in travel during the Bicentennial period and the proximity of APG/EA to New York and Washington would make those facilities more vulnerable to hostile intelligence agencies.

b. The ACSI reexamined the operation and advised that he would consider continuing the operation for a six-month trial period to determine if any more significant information can be developed to indicate a hostile threat to APG/EA. On 2 July 1975, the Deputy Under Secretary of the Army indorsed this proposal.

c. Letter at RED TAB A advises the Commander, APG of the ACSI's decision to continue the operation for another six months and then reassess its progress.

3. (U) RECOMMENDATION: That letter at RED TAB A be approved and signed.

Commander
US Army Test and Evaluation Command
Aberdeen Proving Ground, Maryland 21005

TO: Commander
Aberdeen Proving Ground
Maryland 21005

1. (U) Reference letter, STEAP-IN, subject as above, 17 April 1975, with indorsements.

2. (U) During the past several years, the ICIP effort has grown rapidly. Unfortunately, sufficient resources to conduct these operations have not always been available. In order to make optimum use of these scarce, highly trained resources, it became necessary to conduct a total review of the program and make adjustments. This review revealed that GONDOLA STAR was a marginal operation and I directed its termination.

SUBJECT: Retention of Internal Counterintelligence Program (ICIP)(U)

Headquarters, U. S. Army Test and Evaluation Command, Aberdeen Proving Ground, Maryland 21005 25 APR 1975

TO: Commander, U. S. Army Materiel Command, ATTN: AMCSS, 5001 Eisenhower Avenue, Alexandria, Virginia 22333

1. (U) I recommend that GONDOLA STAR be continued as an active counterintelligence operation in the Aberdeen Proving Ground area.

(U)
2. ~~(C)~~ The conditions set forth by the Commander of Aberdeen Proving Ground I feel support this continued operation. The recently revised ACSI EEI reveals that the weapons, tanks, and chemical defense RDT&E conducted in the Aberdeen Proving Ground area, to include Edgewood Arsenal, are of interest to Communist Bloc intelligence agents. With the advent of the Bicentennial year, Aberdeen Proving Ground will be open to significantly more tourists visits commencing on 14 June and extending throughout the Bicentennial period. During that year, the closeness of Aberdeen Proving Ground and Edgewood Arsenal to the New York City and Washington, DC areas make it vulnerable to hostile intelligence gathering agencies and their desire to exploit the situation to secure EEI. I conclude that security of USAAPG will be vulnerable and that ICIP will be of greater importance than ever during this coming period. I intend to maintain all normal internal security measures and ICIP support on a continuing basis would be a valuable supplement to these measures.

DEPARTMENT OF THE ARMY
U S ARMY ABERDEEN PROVING GROUND
ABERDEEN PROVING GROUND, MARYLAND 21005

STEAP-IN

APR 1 1975

SUBJECT: Retention of Internal Counterintelligence Program (ICIP) (U)

Commander
US Army Test and Evaluation Command

(U)

1. (U) This headquarters has been advised by your Security Officer at a meeting held on 9 April 1975 that the Internal Counterintelligence Program for Aberdeen Proving Ground, Operation GONDOLA STAR (U), is scheduled for termination. It is understood that the AMC Security Officer desires a review of the impact of such an action upon this installation.

(U)

2. (U) It is recognized that specific information of counterintelligence value developed by Operation GONDOLA STAR has been somewhat limited in the past; however, it must be acknowledged that even negative reports are significant provided that effective coverage of critical target areas has been maintained. In some cases, reports received from ICIP sources have served as useful early warnings of developing situations on which corrective action could be promptly initiated. If this operation is terminated, the sensitivity and espionage potential of this installation would remain whereas one tool for building a strong security posture would be removed.

(U)

3. (U) The importance of Aberdeen Proving Ground as an espionage target is obvious. Research and testing programs generate information of worldwide intelligence interest, and scientific personnel have frequent contacts with foreign nationals. The diversified missions of several tenant activities include projects which have been reported to have high priority among Soviet intelligence collectors. Therefore, ICIP support would be a useful supplement to our normal internal security measures.

(U)

4. (U) It is recommended that GONDOLA STAR be continued as an active counterintelligence operation and strengthened with such resources as may be feasible.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 14 May 1975

ACTION REQUIRED: To obtain approval of the quarterly ICIP report.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) BACKGROUND:

a. By memorandum dated 8 February 1972 (BLUE TAB B), the Under Secretary of the Army requested that the VCSA, US Army, provide a quarterly report on all ICIP operations.

b. A report covering the fourth quarter, calendar year 1974 submitted in February 1975 reflected the results of a review conducted by the ACSI. Of the 19 ongoing operations, 12 were identified for termination.

2. (U) DISCUSSION:

a. During the past quarter, 11 operations were terminated. This leaves one operation pending termination. One new operation was approved by the ACSI on 4 March 1975. This operation, CANTER RIDE (U) at the US Army Missile Command, Redstone Arsenal, AL, raises the number of active ICIPs to eight at the close of the quarter.

b. Memorandum at BLUE TAB A provides information required by the USofA.

3. (U) RECOMMENDATION: That memorandum at BLUE TAB A be approved and signed.

MEMORANDUM THRU: VICE CHIEF OF STAFF, UNITED ~~STATES ARMY~~ WTK 28 MAY 1975

FOR: ~~UNDER SECRETARY OF THE ARMY~~ NOTED - USA

SUBJECT: Internal Counterintelligence Program (ICIP) (U)--INFORMATION MEMORANDUM

1. (U) During the past quarter, action was initiated to terminate 12 ICIP operations that were considered to be relatively unproductive or located at less sensitive installations. Eleven operations have been terminated and the twelfth will be terminated in the near future.

2. (U) A new operation, CANTER RIDE, was initiated at the US Army Missile Command, Redstone Arsenal, AL, raising the total number of active operations to eight.

3. (U) Three of the ongoing operations continue to provide information which serves to enhance security at the facilities concerned. LENTIL MONKEY, at the Defense Language Institute, continues to be the most active operation, surfacing security weaknesses involving both instructor and student personnel at that facility.

4. (U) Status reports for each operation are inclosed.

MIIA-SO

SUBJECT: Quarterly Reporting of Internal Counterintelligence Program (ICIP) Operations (U)

HQDA (DAMI-DOI-C)
WASH DC 20310

1. (U) ~~(C)~~ Internal Counterintelligence Program (ICIP) operations during the third quarter of FY 1975 were characterized by a large scale slow-down of activity in all operations as those operations selected for termination early in the quarter were phased out. By 31 March 1975, 11 ICIPS, with supporting confidential sources, were terminated and one additional ICIP is scheduled for termination.

2. (U) ~~(C)~~ Upon completion of the termination actions described above, seven ICIPS remained active. One new ICIP operation providing for insert of an agent in a covert status in the US Army Missile Command (USAMICOM), Redstone Arsenal, AL, was approved on 4 March 1975. The USAMICOM operation, which has the nickname CANTER RIDE (U) raises the total of active ICIPS to eight at the close of the quarter.

3. (U) Brief status reports for each ICIP operation reported upon, including both those terminated and those continued, are attached as inclosures.

a. Location: Fort Ritchie, MD

b. Confidential Source Utilization: Three sources were used during the reporting period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: Information surfaced pertaining to the use of drugs and moral improprieties on the part of a civilian employee assigned to the Office of the Comptroller prompted a suitability investigation of the employee. The employee's access to classified information has been suspended. Adverse suitability information consisting of drug abuse, indebtedness, moral misconduct and mental instability on the part of six military policemen assigned at the Alternate Joint Command Center and Fort Ritchie was provided the Provost Marshal and the Director of Security, US Army Communications Command (USACC). Investigations of the allegations are being made. Information reported on an Army NCO assigned to the Engineering & Installation Office, USACC, alleging excessive gambling and unexplained affluence is being checked prior to requesting that a limited investigation be conducted.

e. Operational Status: On 18 Mar 75, the PIO briefed COL Donald E. Clark, interim Director, Telecommunications, on the ICIP. COL Clark is scheduled to become Commander, USACC Operations Command, after the reorganization of USACC on 1 Jul 75. On 20 March 1975, the PIO presented the Quarterly Briefing to COL Harold G. deMoya, Commander, Fort Ritchie, and COL John J. Plosay, Jr., Deputy Commander, Fort Ritchie. COL deMoya expressed his appreciation for the support provided by the ICIP at Fort Ritchie.

b. Confidential Source Utilization: None.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: None.

e. Operational Status: During the past year several significant security weaknesses surfaced at USAMICOM, prompting the USAMICOM Chief of Staff to request an ICIP operation at that facility. These weaknesses included mishandling and loss of classified documents and allegations concerning suitability of some employees. Considering the sensitivity of the facility and the evident security weaknesses, a degree of urgency in initiating this operation was apparent. Unlike previous ICIP operations, the planning for this operation envisioned the use of a trained military intelligence warrant officer, a "Great Skill" officer, as the principal confidential source in order to expedite the initiation of this operation. The source has been selected for insertion in the target area (the US Army Missile Research, Development and Engineering Laboratory (USAMRDEL)), and has been provided administrative and operational training to enable him to function in his cover capacity as an administrative officer. The source will be assigned in the target area in April 1975. On 14 March 1975, the Commander, Redstone Resident Office, 902d MI Group, briefed COL R. A. Axelson, Director, USAMRDEL, informing him that the requested counterintelligence special support had been approved on 4 Mar 75 and it was proposed to insert an agent by mid-April 1975.

5. (2) ~~(C)~~ CENSUS TIME: (OACSI Approval - 5 Feb 74)

a. Location: Pentagon Telecommunications Center (PTC), US Army Communications Command (USACC), The Pentagon, Washington, DC.

b. Confidential Source Utilization: One source was used during the reporting period.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: None.

e. Operational Status: This operation is conducted by representatives of the Pentagon Counterintelligence Force (PCF). Early in the quarter, it was necessary to divert virtually the entire strength of PCF from their normal functions to a files screening project at the Counterintelligence Analysis Detachment and the Special Security Group. Both the PLO and PCO were assigned to the files screening project and were able to devote only a limited amount of time to this ICIP operation. This precluded any significant expansion or development of the ICIP. The supported command requested that an attempt be made to obtain information on several persons assigned to PTC suspected of drug abuse. Sources have failed to surface any concrete information to date in this connection. On 1 April 1975, the PLO presented the Quarterly Briefing to COL Joseph T. Adinaro, Commander, PTC.

e. Operational Status: The Project Liaison Officer (PLO) for this operation will also perform the Project Case Officer (PCO) function when Source assets are obtained. One prospective source has been identified in the Missile Electronic Warfare Technical Area (MEWTA), and recruitment is planned for the next quarter. On 18 March 1975, the PLO presented the Quarterly Briefing to Mr. William F. Arquette, Chief, Intelligence Div, WSMR. Mr. Arquette, speaking for the Commander, WSMR, expressed satisfaction with the progress of the ICIP to date.

8. (C) LENTIL MONKEY: (OACSI Approval - 26 Oct 71)

a. Location: Defense Language Institute (DLI), Presidio of Monterey, CA.

b. Confidential Source Utilization: Five confidential sources were utilized during the quarter.

c. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) An instructor in the Chinese-Mandarin Language Dept may have had contact with personnel of the Peoples Republic of China during a business conference in Jan 75. The instructor, who has several commercial enterprises, allegedly attended a conference in Dallas, Texas, where the Chinese were present. An effort is being made to obtain further details.

(2) Sources of the operation provided information which established the existence of contacts between an instructor of the Arabic Language Dept and officials of the Palestinian Liberation Organization. The instructor, who is a US citizen, allegedly utilizes a Lebanese passport when he travels in the Middle East. Summaries of Information containing details have been passed to the FBI and the Immigration and Naturalization Service.

(3) Sources in the project surfaced a series of reports on a USAF student, who, through his Czech language instructor, has socialized with citizens of Czechoslovakia. By USAF regulations, the NCO was to have reported promptly any contact with citizens of a Communist Bloc country. The NCO failed to make the necessary report. The information was passed to the OSI by Summaries of Information and the OSI is now conducting an investigation of the USAF student.

(4) Suitability information concerning DLI students was passed to the Security Officer, DLI.

e. Operational Status: Of the five confidential sources used in the operation, two were terminated during the period due to their graduation. The remaining three provide coverage in the Russian, Czech, and Serbo-Croatian Language Department. Prospective confidential sources are being assessed in the Russian, Czech, Polish, and Chinese-Mandarin Departments. In addition to the confidential sources, 21 conventional sources are providing coverage in ten language departments. All sources are concentrated in the Priority I language departments. The PLO provided the Quarterly Briefing on 21 March 1975 in the Office of the Director, DLI. Those

attending the briefing were COL James R. Koenig, Director, DLI; COL Avery Kay, Deputy Director, DLI; and MAJ Richard Erickson, Security Officer, DLI. COL Koenig stated that he believed the information gained from the ICIP had been particularly helpful and had been largely responsible for several command letters published by DLI in an effort to improve internal security at DLI. The Director also stated that as a result of information provided by the ICIP, the teaching texts and materials of all DLI courses are being reviewed to eliminate politically contentious materials from the language courses.

REMARKS

The attached is forwarded for your information. This is the result of a 902nd MI Group review of five key facilities in the Canal Zone to determine if the security posture at any of the facilities warranted initiation of ICIP operations. After reviewing the package, I concur with the USAINTA recommendation that ICIP operations are not appropriate.

MIIA-SO

SUBJECT: Evaluation of Selected Installations in Panama Canal Zone (U)

HQDA (DAMI-DOI-C)
WASH DC 20310

1. (U) (C) During a 19 Feb 75 visit by the ACSI to the 902d MI Group, the 902d was tasked to explore the possibility of the need for an ICIP operation in the Panama Canal Zone. The 902d MI Group has conducted a review of five key installations/units for evidence of past and present HoIS threat indicators.

2. (U) (C) The five installations/units which were assessed are 470th MI Group (TAB A); 193d Infantry Brigade (TAB B); USASA Det, SOUTHCOM, and 408th ASA Det (TAB C); Armed Forces Courier Station - Panama (TAB D); J-2/3 Directorates' Warning and Operations Centers - SOUTHCOM (TAB E). A threat assessment common to all activities, units, or installations in the Canal Zone is attached as TAB F.

3. (U) (C) Commanders of the installations concerned in each instance have stated that current counterintelligence support is adequate to maintain a proper security posture and an ICIP operation is not warranted at this time. The Commander, 902d MI Group concurs in this position and recommends that an ICIP operation not be initiated at any of the five units assessed. USAINTA also concurs in this recommendation.

~~CONFIDENTIAL~~

470th MILITARY INTELLIGENCE GROUP

1. (U) GENERAL: The 470th Military Intelligence Group (MIGP) is a subordinate unit of the 193d Infantry Brigade (Canal Zone). This unit consists of 67 military and 18 civilian personnel. There are 80 personnel assigned to the Group Headquarters, Fort Amador (FA), Canal Zone (CZ), on the Pacific side of the isthmus, and 5 stationed at the Atlantic Field Office, Building 214, Fort Gulick (FG), CZ, on the Atlantic side. Due to the importance and sensitivity of its mission, the 470th MIGP is considered a CRITICAL SENSITIVE activity.

2. (U) HISTORY: The 470th MIGP was born on 12 July 1944, as a Counter-intelligence Corps Detachment. It was first picked up on the Army's active duty roles on 31 July 1944, at the post of Quarry Heights, CZ. The 470th Intel Corps Detachment was redesignated and reorganized into an Intel Corps Group in September 1964, with a Security Service Detachment, the 508th MID in support of the 193d Infantry Brigade, the 610th MID, and the 471st MID in Puerto Rico. Two years later, in 1966, the unit was renamed the 470th MIGP, its present designation.

3. (U) MISSION: The mission of the 470th MIGP is to detect treason, sedition, and disaffection; to detect, prevent, and neutralize espionage, subversion, and sabotage directed against the United States Army, its personnel and installations; to conduct counterintelligence (CI) operations; and to collect intelligence through conduct of HUMINT operations.

4. (FOUO) SECURITY HISTORY/PRESENT SECURITY POSTURE: Building 47, FA, where the headquarters, 470th MIGP is located, is a two-story masonry structure used for administrative office space. The 470th MIGP has a photographic laboratory located on the first floor of Building 46, a motor pool located in Buildings 96 and T95, a Liaison Office located at Building 49, all at FA, and an Atlantic Field Office located at Building 214, Ft Gulick, CZ. A Counterintelligence Survey was conducted on the 470th MIGP on 12 December 1966, to establish basic security requirements. Subsequent CI inspections disclosed no major deviations from requirements established in the survey. Security Assistance Visits are utilized by the 470th MIGP in maintaining a good security posture. There have been no acts of espionage, sabotage or subversion detected in the unit.

5. (U) SECURITY SUPPORT ACTIVITIES: There are several US military and civilian activities in the CZ that render direct or indirect intelligence and CI support, external physical security support, security assistance, and police services to the 470th MIGP. These support activities augment the internal security procedures of the 470th MIGP and assist it in accomplishing its mission. The units or activities which provide direct or indirect support to the 470th MIGP are as follows:

~~CONFIDENTIAL~~

a. Canal Zone Field Office (CZFO), 902d MIGP, Fort Amador, CZ: Conducts Personnel Security Investigations (PSI) in the CZ. Provides CZ based surveillance and counter-surveillance support operations. Provides Security Assistance services in support of the 470th MIGP's mission. Conducts CI surveys, inspections, technical surveys and inspections, SAEDA lectures, penetration inspections, and CI related advice and assistance in support of the Group's security objectives.

b. United States Army Security Agency (USASA) Detachment-USSOUTHCOM, Fort Clayton (FC), CZ: Provides advice and assistance on capabilities and limitations of EW and SIGINT. Evaluates intelligence requirements in terms of USASA mission capabilities and maintains a continuous estimate of the local CRYPTOLOGICAL situation. Provides COMINT during contingency situations.

c. Naval Intelligence Service, FA, CZ: Provides information of intelligence and CI interest on local hostile activities and potential threats in functioning as a member of the Delimitation Committee.

d. Office of Special Investigations, US Air Force, Howard Air Force Base, CZ: Provides intelligence and CI information regarding hostile organizations and their activities as well as threat information of interest. Functions as a local member of the Delimitation Committee.

e. Provost Marshal Office, 193d Infantry Brigade, FC, CZ: Assists in preventing unauthorized vehicle and personnel entry in and adjacent to US Army installations and structures in the CZ. Provides additional security guard and personnel restrainment force when required. Conducts Physical Security Surveys and Inspections. Maintains criminal investigation files for review and use during the conduct of PSIs. Assists in preventing overt acts of sabotage by having mobile and foot Military Police patrols.

f. Criminal Investigations Detachment, Corozal, CZ: Provides information of intelligence interest uncovered during criminal investigations. Maintains files of all investigations conducted which are available for use during the conduct of PSIs or for intelligence purposes.

g. Internal Security Office, Canal Zone Government, Balboa Heights, CZ: Maintains files which are available for review during the conduct of PSIs or for intelligence purposes. Within the constraints of DA policies, provides information regarding intelligence matters of mutual benefit on US, Panamanian, Central and South Americans, as a local security agency.

h. Immigration and Naturalization Service (IN), District Court House, Ancon, CZ: Provides information regarding citizenship status on US naturalized citizens who are DOD-affiliated and of intelligence interest or the subjects of PSIs. Provides possible threat information of interest uncovered during normal IN functions.

6. (U) THREAT: See Tab F which is classified SECRET-NO FOREIGN DISSEMINATION.

~~CONFIDENTIAL~~

7. (U) COMMANDER'S EVALUATION: The 470th MI GP advised that current CI support rendered by the CZFO, 902d MI GP is considered adequate in maintaining a good security posture. In the event a problem develops which falls within the purview of the Internal Counterintelligence Program or any other security support operation, a request for that service will be submitted.

8. (U) ~~(C)~~ CONCLUSIONS AND RECOMMENDATION: A detailed and minute search of the files of the Security Manager, 470th MI GP, as well as our own files, failed to disclose any history or current trend of bad security practices, disaffection, espionage, sabotage or subversion within the unit. Administrative security deficiencies found during the course of routine CI inspections had been corrected. The main threats, as pointed out in paragraph 6 above, are external rather than internal in nature and are targeted against by the entire intelligence community in the CZ. The commander clearly feels that current CI support rendered is adequate and has no desire for an ICIP operation at the present time. Based on the facts presented above, it is believed that an ICIP operation is presently neither warranted nor justified in the 470th MI GP. Recommend that an ICIP operation not be instituted in the 470th MI GP at this time.

193D INFANTRY BRIGADE (CANAL ZONE)

1. ~~(C)~~ GENERAL: Within the Headquarters, 193d Infantry Brigade (Canal Zone), Fort Amador (FA), Canal Zone (CZ), and its subordinate units or elements, only the Brigade Command Group (BCG), the Directorate of Intelligence (DINTEL), the Directorate of Operations, Plan and Training (DOPT), and the 470th Military Intelligence Group (MI GP), were considered as falling in the category of CRITICAL SENSITIVE. BCG, DINTEL and DOPT are all located at Building 1, FA, and will be dealt with in this Tab. The 470th MI GP is located at Building 47, FA, and is addressed separately in Tab A.

2. (U) HISTORY: On 1 July 1917, US Army personnel in the CZ were formed into a separate command and designated as the "Panama Canal Department". With the formation of a unified Caribbean Command in November 1947, the US Army element in the CZ was designated the US Army Caribbean Command with its Headquarters located at Quarry Heights (QH), CZ. In 1949, the Headquarters was moved to FA, its present location. On 6 June 1963, the US Army Caribbean Command was redesignated the US Army Forces Southern Command (USARSO), and remained so for 11 years. With the disestablishment of USARSO on 31 October 1974, the 193d Inf Bde assumed all command functions and was redesignated Headquarters, 193d Inf Bde (CZ).

3. (U) MISSIONS:

a. BCG: The BCG, under the direction of the Commanding General, US Army Forces Command, (FORSCOM), Atlanta, Georgia, commands all subordinate US Army units and activities in the CZ; maintains a combat-ready operational posture; provides support to the unified command as directed by CINCSO; and exercises operational control over USACC Agency-Panama.

b. DINTEL: The DINTEL, manages the collection, evaluation and processing of information into intelligence and the establishment of required intelligence, counterintelligence (CI) and security programs in support of the installation command's mission.

c. DOPT: The DOPT prepares, maintains and supervises the execution of policies and directives for the tactical security and defense of the Brigade's area. Plans, directs and coordinates for the Commander all CZ defense operations required of the Brigade including joint operations. Monitors and reports operational readiness. Formulates and coordinates estimates, plans, policies and functions pertaining to force structure, organization, equipment, and training of subordinate units. Supervises and coordinates reserve component matters within the Brigade. Advises on and supervises all Army Aviation matters. Supervises the activities of the Emergency Operations Center (EOC).

4. (U) ~~(C)~~ SECURITY HISTORY/PRESENT SECURITY POSTURE: Building 1, FA, where the BCG, DINTEL, and the DOPT are located, is a three-story masonry structure used for administrative office space. Counterintelligence (CI) surveys were conducted on Building 1 in July 1961, and during the months of August and September 1970. At that time, Building 1 housed USARSO'S Command Group, G-2, and G-3 offices, now the BCG, DINTEL, and DOPT respectively. Subsequent CI inspections have disclosed no major deviations from the security requirements established in the CI surveys. Additionally, Security Assistance Visits are presently being conducted on the activities as requested, with formal security inspections for CI purposes scheduled locally for the remainder of Fiscal Year 75. There have been no acts of espionage, sabotage or subversion detected in the BCG, DINTEL, or DOPT.

5. (U) ~~(C)~~ SECURITY SUPPORT ACTIVITIES: There are several US military and civilian activities in the CZ that render direct or indirect intelligence and CI support, external physical security support, security assistance, and police services to the 193d Infantry Brigade (Canal Zone). These support activities augment the internal security procedures of the Brigade and assist it in accomplishing its mission. The units or activities which provide direct or indirect support to the Brigade are as follows:

a. Canal Zone Field Office (CZFO), 902d MI GP, FA, CZ: Conducts Personnel Security Investigations (PSI) in the CZ. Provides CZ based surveillance and counter-surveillance support operations. Provides Security Assistance services in support of the Brigade's mission. Conducts CI surveys, inspections, technical surveys and inspections, SAEDA lectures, penetration inspections, and CI related advice and assistance in support of the Group's security objectives.

b. 470th Military Intelligence Group, FA, CZ: Provides intelligence operations and services to detect treason, sedition and disaffection and to detect, prevent and neutralize espionage, subversion and sabotage directed against the US Army, its personnel and installations in the CZ. Conducts CI operations and collects intelligence through conduct of HUMINT operations.

c. United States Army Security Agency (USASA) Detachment-USSOUTHCOM, Fort Clayton (FC), CZ: Provides advice and assistance on capabilities and limitations of EW and SIGINT. Evaluates intelligence requirements in terms of USASA mission capabilities and maintains a continuous estimate of the local CRYPTOLOGICAL situation. Provides COMINT during contingency situations.

d. Naval Intelligence Service, FA, CZ: Provides information of intelligence and CI interest on local hostile activities and potential threats.

e. Office of Special Investigations, US Air Force, Howard Air Force Base, CZ: Provides intelligence and CI information regarding hostile

~~CONFIDENTIAL~~

organizations and their activities as well as threat information of interest.

f. (U) Provost Marshal Office, 193d Infantry Brigade, FC, CZ: Assists in preventing unauthorized vehicle and personnel entry in and adjacent to US Army installations and structures in the CZ. Provides additional security guard and personnel restrainment force when required. Conducts Physical Security Surveys and Inspections. Maintains criminal investigation files for review and use during the conduct of PSIs. Assists in preventing overt acts of sabotage by having mobile and foot Military Police patrols.

(U) g. (C) Criminal Investigations Detachment, Corozal, CZ: Provides information of intelligence interest uncovered during criminal investigations. Maintains files of all investigations conducted which are available for use during the conduct of PSIs or for intelligence purposes.

h. (U) Internal Security Office, Canal Zone Government, Balboa Heights, CZ: Maintains files which are available for review during the conduct of PSIs or for intelligence purposes. Within the constraints of DA policies, provides information regarding intelligence matters of mutual benefit on US, Panamanian, Central and South Americans as a local security agency.

i. (U) Immigration and Naturalization Service (IN), District Court House, Ancon, CZ: Provides information regarding citizenship status on US naturalized citizens who are DOD-affiliated and of intelligence interest or the subjects of PSIs. Provides possible threat information of interest uncovered during normal IN functions.

6. (U) THREAT: See Tab F which is classified SECRET-NO FOREIGN DISSEMINATION.

7. (U) COMMANDER'S EVALUATION: The 193d Infantry Brigade (Canal Zone) advised that the current support rendered by the CZFO, 902d MI GP, is considered adequate in maintaining a good security posture for the Brigade. Should a problem arise which falls within the purview of the Internal Counterintelligence Program, or any other security support operation, a request for that service will be initiated.

8. (U) ~~(C)~~ CONCLUSIONS AND RECOMMENDATION: To gather the information necessary to make a recommendation, a complete review of the files of the BCG, DINTEL, and DOPT was made. It was determined that there was no evidence of any security problems which could not be corrected by routine CI support. The review did not disclose any trends which might lead to weakening of the security posture. Based on information and facts already stated, and the feelings of the commander that his security posture is adequate, it is felt that at the present time, an ICIP operation is neither warranted nor justified. It is recommended that an ICIP operation not be instituted at this time.

US ARMY SECURITY AGENCY DETACHMENT SOUTHERN COMMAND

AND

408TH ARMY SECURITY AGENCY DETACHMENT

1. ~~(C)~~ GENERAL: The US Army Security Agency Detachment Southern Command (USASADSC), which includes the 408th ASA Detachment is a subordinate unit of the US Army Security Agency, Arlington Hall, Virginia, and is a tenant unit in support of the 193d Infantry Brigade (Canal Zone). USASADSC has its Headquarters in Building 220, Fort Clayton (FC), CZ. Due to the extreme sensitivity of its mission, the USASADSC is considered a CRITICAL SENSITIVE activity.

2. (U) HISTORY: Headquarters, US Army Security Agency Southern Command was established in the Canal Zone in June 1949. The headquarters was located in Building 220, FC, CZ, with an operational site located at Chiva Chiva, CZ. On 31 March 1971, it was redesignated USASADSC, and the site at Chiva Chiva was closed. All operational functions were consolidated in Building 220. With the redesignation, the 408th ASA Detachment was formed to enable the headquarters to assume its increased tactical role.

3. ~~(U)~~ MISSIONS:

a. USASADSC: The USASADSC operates as the senior USASA element in Latin America for command and control purposes. Conducts liaison between local forces and USASA elements in the CZ and higher USASA Headquarters. Operates and maintains a CRITICOMM terminal station, and coordinates and furnishes advice and assistance to US Military Forces in the CZ on capabilities and limitations of EW and SIGINT. Evaluates supported command intelligence requirements in terms of USASA mission capabilities, and maintains a continuous estimate of the cryptologic situation.

b. 408th ASA Det: The 408th ASA Det. provides a separate US Army Brigade with direct communications intelligence (COMINT) during contingency situations and issues intelligence information reports to SSO, Panama. Provides, within the limits of its capabilities, COMINT information to an ASA Battalion, Group, or Theater Headquarters in support of the national intelligence effort.

4. (FOUO) SECURITY HISTORY/PRESENT SECURITY POSTURE: The USASADSC and its subordinate unit, the 408th ASA Det, are administratively and operationally located in Building 220, FC, CZ. Counterintelligence Services support is primarily the responsibility of the Technical Services Activity (TSA), US Army Intelligence Agency (USAINTA), Fort Meade, Maryland. Locally, the Canal Zone Field Office, (CZFO), 902d Military Intelligence Group (MI GP) furnishes routine investigative support and emergency technical support. The last CI Inspection/Technical Service was conducted during December 1974 by TSA and disclosed no major security problems. A check of local files and those of USASADSC did not indicate any weakness in their security posture, or trends which could lead to security weaknesses. It was found that USASADSC continuously check and upgrade the

DECLASSIFIED ... E.O. 12958 ... DEC 2005

Page 1967 of 3957

~~CONFIDENTIA~~

integrity of their security program. There have been no acts of espionage, sabotage or subversion detected in the unit's history.

5. (C) SECURITY SUPPORT ACTIVITIES: There are several US military and civilian activities in the CZ that render direct or indirect intelligence and CI support, external physical security support, security assistance, and police services to the USASADSC. These support activities augment the internal security procedures of the Agency and assist it in accomplishing its mission. The units or activities which provide direct or indirect support to the Agency are as follows:

a. (U) CZFO, 902d MI GP, Fort Amador (FA), CZ: Conducts Personnel Security Investigations (PSI) in the CZ. Provides CZ based surveillance and counter-surveillance support operations. Provides Security Assistance services in support of the USASAD's mission. Conducts CI surveys, inspections, technical surveys and inspections, SAEDA lectures, penetration inspections, and CI related advice and assistance in support of the Agency's security objectives.

b. (U) 470th Military Intelligence Group, FA, CZ: Provides intelligence operations and services to detect treason, sedition and disaffection and to detect, prevent and neutralize espionage, subversion and sabotage directed against the US Army, its personnel and installations in the CZ. Conducts CI operations and collects intelligence through conduct of HUMINT operations.

c. (U) Naval Intelligence Service, FA, CZ: Provides information of intelligence and CI interest on local hostile activities and potential threats.

d. (U) Office of Special Investigations, US Air Force, Howard Air Force Base, CZ: Provides intelligence and CI information regarding hostile organizations and their activities as well as threat information of interest.

e. (U) Provost Marshal Office, 193d Infantry Brigade, FC, CZ: Assists in preventing unauthorized vehicle and personnel entry in and adjacent to US Army installations and structures in the CZ. Provides additional security guard and personnel restrainment force when required. Conducts Physical Security Surveys and Inspections. Maintains criminal investigation files for review and use during the conduct of PSIs. Assists in preventing overt acts of sabotage by having mobile and foot Military Police patrols.

(U) f. (C) Criminal Investigations Detachment, Corozal, CZ: Provides information of intelligence interest uncovered during criminal investigations. Maintains files of all investigations conducted which are available for use during the conduct of PSIs or for intelligence purposes.

h. (U) Internal Security Office, Canal Zone Government, Balboa Heights, CZ: Maintains files which are available for review during the conduct of PSIs or for intelligence purposes. Within the constraints of DA policies, provides information regarding intelligence matters of mutual benefit on US, Panamanian, Central and South Americans as a local security agency.

Page 1968 of 3957

h. Immigration and Naturalization Service (IN), District Court House, Ancon, CZ: Provides information regarding citizenship status on US naturalized citizens who are DOD-affiliated and of intelligence interest or the subjects of PSIs. Provides possible threat information of interest uncovered during normal IN functions.

i. United States Army Security Agency, Arlington Hall Station, Arlington, VA: CI and technical security support is provided USASADSC by scheduled visits from its higher headquarters in Arlington, Virginia.

j. TSA, USAINTA, Fort Meade, Maryland: Provides technical and oounter-intelligence services to field activities of ASA by programming and scheduling inspections worldwide. Responding to field elements in semi-critical case, to insure proper security measures are being complied with, in order to maintain field elements in a high state of operational readiness.

6. (U) THREAT: See Tab F which is classified SECRET-NO FOREIGN DISSEMINATION.

7. (U) COMMANDER'S EVALUATION: The Commander, USASADSC, advised that the CI support received from TSA, the CZFO, 902d MI GP, and his own internal security personnel is considered adequate in maintaining a good security posture. In the event a problem develops which falls within the purview of the Internal Counterintelligence Program or any other security support operation, a request for assistance would be submitted through his Headquarters.

8. (U) CONCLUSIONS AND RECOMMENDATION: A detailed search of the security files of USASADSC, to include the 408th ASA Det, failed to disclose any weakness in their security posture or indicate a trend in that direction. Past CI services by TSA indicated some minor deficiencies, but those had been corrected shortly after the service was completed. Due to the extreme sensitivity of the unit, the Commander maintains a constant check of his unit's security program. This program is felt to be adequate. The main threats, as pointed out in paragraph 6 above, are external rather than internal in nature, and are targeted against by the entire intelligence community in the CZ. In evaluating the ICIP program, the Commander asked for guidance from his Headquarters in the US. The guidance he received agreed with his determination, that he had no desire for an ICIP operation at the present time. Based on the facts presented above, it is believed that an ICIP operation is presently neither warranted nor justified, and it is recommended that an ICIP operation not be instituted in the USASADSC at this time.

UNITED STATES ARMY COURIER STATION - PANAMA

1. (U) GENERAL: The United States Army Courier Station - Panama (USACS-P) is a subordinate activity of the Office of the Adjutant General, Washington, D.C., with its office located at the Air Freight Terminal, Howard Air Force Base (HAFB), Canal Zone (CZ). This activity consists of only two individuals, one officer and one NCO. Because of the activity's continuous mission of handling extremely sensitive Departments of State and Defense documents and material, it falls in the CRITICAL SENSITIVE category.

2. (U) HISTORY: On 15 January 1966, the United States Army Courier Service was organized under the jurisdiction of the Office of the Adjutant General, Washington D.C. At that time, the United States Army Courier Transfer Station, United States Army Forces Southern Command (USARSO), Fort Amador, CZ, was disestablished and the USACS-P created and located at HAFB, where it has been to present.

3. (U) MISSION: The mission of the USACS-P is the secure and expedient transportation of material authorized protected handling by courier; to provide facilities for receiving, safeguarding, processing, delivering, and dispatching such material; to provide transportation facilities for TOP SECRET and CRYPTOGRAPHIC material to US Forces in the Panama Canal Zone, the Panama Canal Company, Federal Aviation Agency, Oceanographic Representative, U.S. Embassy - Panama, ships or units of the North Atlantic Treaty Organization, the Southeast Asia Treaty Organization, and the US State Department.

4. (U) SECURITY HISTORY/PRESENT SECURITY POSTURE: The Air Freight Terminal, HAFB, where USACS-P is located is a one-story concrete block office and warehouse structure used for the storage, maintenance and administration of in-transit freight and related material. USACS-P has a steel-feinforced concrete vault facility which meets the physical security requirements for storage of TOP SECRET material. An initial CI Survey was conducted on 28 April 1966, with recommended security requirements subsequently implemented. USACS-P's most recent CI inspection was conducted on 13 April 1973, with no major deviations from recommended requirements recorded. A search of the activity's files failed to reveal any history of security violations. There is no reason to believe USACS-P personnel have been involved in any security infractions. There are no reasons to believe the security objectives of USACS-P are not being met. USACS-P is scheduled for a routine CI inspection in 1975 by its parent organization, Headquarters, Armed Forces Courier Service (AFCS), Washington D.C., 20314.

5. (C) SECURITY SUPPORT ACTIVITIES: There are several US military and civilian activities in the CZ that render direct or indirect intelligence

and CI support, external physical security support, security assistance, and police services to the USACS-P. These support activities augment the internal security procedures of the USACS-P and assist it in accomplishing its mission. The units or activities which provide direct or indirect support to the USACS-P are as follows:

a. (U) Canal Zone Field Office (CZFO), 902d MI GP, Fort Amador (FA), CZ: Conducts Personnel Security Investigations (PSI) in the CZ. Provides CZ based surveillance and counter-surveillance support operations. Provides Security Assistance services in support of the USACS-P mission. Conducts CI surveys, inspections, technical surveys and inspections, SAEDA lectures, penetration inspections, and CI related advice and assistance in support of the USACS-P security objectives.

b. (U) 470th Military Intelligence Group, FA, CZ: Provides intelligence operations and services to detect treason, sedition and disaffection and to detect, prevent and neutralize espionage, subversion and sabotage directed against the US Army, its personnel and installations in the CZ. Conducts CI operations and collects intelligence through conduct of HUMINT operations.

c. (U) United States Army Security Agency (USASA) Detachment-USSOUTHCOM, Fort Clayton (FC), CZ: Provides advice and assistance on capabilities and limitations of EW and SIGINT. Evaluates intelligence requirements in terms of USASA mission capabilities and maintains a continous estimate of the local CRYPTOLOGICAL situation. Provides COMINT during contingency situations.

d. (U) Naval Intelligence Service, FA, CZ: Provides information of intelligence and CI interest on local hostile activities and potential threats.

e. (U) Office of Special Investigations, US Air Force, Howard Air Force Base, CZ: Provides intelligence and CI information regarding hostile organizations and their activities as well as threat information of interest.

f. (U) Provost Marshal Office, 193d Infantry Brigade, FC, CZ: Assists in preventing unauthorized vehicle and personnel entry in and adjacent to US Army installations and structures in the CZ. Provides additional security guard and personnel restrainment force when required. Conducts Physical Security Surveys and Inspections. Maintains criminal investigations files for review and use during the conduct of PSIs. Assists in preventing overt acts of sabotage by having mobile and foot Military Police patrols.

g. (C) Criminal Investigations Detachment, Corozal, CZ: Provides information of intelligence interest uncovered during criminal investigations. Maintains files of all investigations conducted which are available for use during the conduct of PSIs or for intelligence purposes.

~~CONFIDENTIAL~~

Page 1971 of 3957

h. Internal Security Office, Canal Zone Government, Balboa Heights, CZ: Maintains files which are available for review during the conduct of PSIs or for intelligence purposes. Within the constraints of DA policies, provides information regarding intelligence matters of mutual benefit on US, Panamanian, Central and South Americans as a local security agency.

i. Immigration and Naturalization Service (IN), District Court House, Ancon, CZ: Provides information regarding citizenship status on US naturalized citizens who are DOD-affiliated and of intelligence interest or the subjects of PSIs. Provides possible threat information of interest uncovered during normal IN functions.

j. Headquarters, Armed Forces Courier Service, Washington, D.C.: Provides CI services and support in forms of surveys, inspections, and visits. Provides intelligence and security information and guidance through directives, regulations, and staff visits. Coordinates with local commands for additional CI and security support when required. Provides assistance in matters of security as a higher headquarters.

6. (U) THREAT: See Tab F which is classified SECRET-NO FOREIGN DISSEMINATION

7. (U) COMMANDER'S EVALUATION: The Commander,USACS-P, advised that USACS-P consists of only two persons and that the present counterintelligence services provided USACS-P are adequate and meets his security requirements. USACS-P does not desire additional CI support at this time.

8. (FOUO) CONCLUSIONS AND RECOMMENDATION: An examination of security and administrative files failed to disclose information that USACS-P's security posture was anything but sound and secure. In addition, security checks provided by Headquarters (HQ), AFCS, revealed that USACS-P was performing its mission, to include maintaining a good security posture, in an outstanding manner. An in-depth study of the local hostile threat and the mission of USACS-P conducted with the Commander, USACS-P, failed to indicate that an on-going or potential internal security threat exists. There are no reasons to believe that the normal CI support and service provided USACS-P by HQS, AFCS, in conjunction with local intelligence and security agencies, CZ, is not adequate coverage to identify and neutralize any CI threat to USACS-P. In view of the existing CI coverage of the USACS-P, and that there are only two persons assigned to it, additional CI support is not recommended for USACS-P at the present time.

J-2/3 DIRECTORATES' WARNING AND OPERATIONS CENTER

1. (U) ~~(C)~~ GENERAL: The J-2/3 Directorates' Warning and Operations Center (J-2/3 DWOC) is a subordinate joint activity of the J-2 and J-3 Directorates, United States Southern Command (USSOUTHCOM), Quarry Heights (QH), Canal Zone (CZ). The J-2/3 DWOC is housed in Building 81, "The Tunnel", a building that is tunneled into a hillside in QH, and is a combined service activity manned by US Army, Navy, and Air Force personnel. Because of its communication capabilities and functions within USSOUTHCOM, and its support to the JCS, the J-2/3 DWOC is considered a CRITICAL SENSITIVE facility.

2. (U) HISTORY: Caribbean Command, a Unified Command under the JCS, had its genesis in the World War II Caribbean Defense Command which was organized in early 1942 and was composed of the Panama Canal and Puerto Rican Departments of the Army, the 10th and 15th Naval Districts of the Navy, the Trinidad Base Command, and the Panama Canal. The Caribbean Command was established at QH, CZ, on 1 November 1947, by authority of the JCS. The Component forces assigned to Caribbean Command consisted of the Army and Air Force elements of the Caribbean Defense Command and, with the exception of certain fleet facilities and bases, of the Navy's Caribbean Sea Frontier. On 6 June 1963, the Caribbean Command was redesignated USSOUTHCOM.

3. (U) ~~(FOUO)~~ MISSIONS:

a. J-2 Warning Center: The J-2 Warning Center supports the Director of Intelligence through the operation of the Warning Branch by preparing and disseminating current intelligence and warning indications and through the preparation of current and long range estimates, studies and assessments. Provides supervision and personnel for the J-2 element of the Battle Staff and the Emergency Relocation Site (ERS) when activated.

b. J-3 Operations Center: The J-3 Operations Center implements JCS emergency action procedures within USSOUTHCOM; prepares, coordinates, and disseminates USSOUTHCOM Emergency Action Procedures (EAP) in support of the JCS. In addition, prepares, coordinates, disseminates and implements USSOUTHCOM Control of Civil Disturbance Posture, USSOUTHCOM EAP, VOL III. Supervises the manning and operation of the emergency actions section of the Joint Operations Center and the ERS. Prepares, reviews, coordinates and supervises plans within the USSOUTHCOM command and control system to insure interface and capability with the Worldwide Military Command and Control Systems.

4. (U) ~~(FOUO)~~ SECURITY HISTORY/PRESENT SECURITY POSTURE: Building 81, the Tunnel, where the J-2/3 DWOC is located, is constructed of steel reinforced concrete embedded in sub-strata rock in Ancon Hill, QH, CZ, with

~~CONFIDENTIAL~~

the building extending through the hill. The entrance to the tunnel is manned by armed guards and unauthorized access to it could result in exceptionally grave danger to the US. The J-2/3 DWOC is a highly sensitive operational activity and is the coordination nerve center of USSOUTHCOM. A CI Security Survey was conducted on the tunnel in 16 June 1961, to determine the security measures necessary to limit or deny unauthorized access to it. Subsequent CI inspections and Security Assistance Visits have been conducted to insure compliance with the procedures established in the Security Survey. There are no known on-going internal threats in the J-2/3 DWOC.

5. (U~~C~~) SECURITY SUPPORT ACTIVITIES: There are several US military and civilian activities in the CZ that render direct or indirect intelligence and CI support, external physical security support, security assistance, and police services to the J-2/3 DWOC. These support activities augment the internal security procedures of the J-2/3 DWOC and assist it in accomplishing its mission. The units or activities which provide direct or indirect support to the J-2/3 DWOC are as follows:

a. Canal Zone Field Office (CZFO), 902d MI GP, Fort Amador (FA), CZ: Conducts Personnel Security Investigations (PSI) in the CZ. Provides CZ based surveillance and counter-surveillance support operations. Provides Security Assistance services in support of the J-2/3 DWOC mission. Conducts CI surveys, inspections, technical surveys and inspections, SAEDA lectures, penetration inspections, and CI related advice and assistance in support of the Group's security objectives.

b. 470th Military Intelligence Group, FA, CZ: Provides intelligence operations and services to detect treason, sedition and disaffection and to detect, prevent and neutralize espionage, subversion and sabotage directed against the US Army, its personnel and installations in the CZ. Conducts CI operations and collects intelligence through conduct of HUMINT operations.

c. United States Army Security Agency (USAS) Detachment-USSOUTHCOM, Fort Clayton (FC), CZ: Provides advice and assistance on capabilities and limitations of EW and SIGINT. Evaluates intelligence requirements in terms of USASA mission capabilities and maintains a continuous estimate of the local CRYPTOLOGICAL situation. Provides COMINT during contingency situations.

d. Naval Intelligence Service, FA, CZ: Provides information of intelligence and CI interest on local hostile activities and potential threats.

e. Office of Special Investigations, US Air Force, Howard Air Force Base, CZ: Provides intelligence and CI information regarding hostile organizations and their activities as well as threat information of interest.

f. (U) Provost Marshal Office, 193d Infantry Brigade, FC, CZ: Assists in preventing unauthorized vehicle and personnel entry in and adjacent to US Army installations and structures in the CZ. Provides additional security guard and personnel restrainment force when required. Conduct Physical Security Surveys and Inspections. Maintains criminal investigation files for review and use during the conduct of PSIs. Assists in preventing overt acts of sabotage by having mobile and foot Military Police patrols.

(U) g. (C) Criminal Investigations Detachment, Corozal, CZ: Provides information of intelligence interest uncovered during criminal investigations. Maintains files of all investigations conducted which are available for use during the conduct of PSIs or for intelligence purposes.

h. (U) Internal Security Office, Canal Zone Government, Balboa Heights, CZ. Maintains files which are available for review during the conduct of PSIs or for intelligence purposes. Within the constraints of DA policies, provides information regarding intelligence matters of mutual benefit on US, Panamanian, Central and South Americans as a local security agency.

i. (U) Immigration and Naturalization Service (IN), District Court House, Ancon, CZ: Provides information regarding citizenship status on US naturalized citizens who are DOD-affiliated and of intelligence interest or the subjects of PSIs. Provides possible threat information of interest uncovered during normal IN functions.

6. (U) THREAT: See Tab F which is classified SECRET-NO FOREIGN DISSEMINATION.

7. (U) COMMANDER'S EVALUATION: The CINC, USSOUTHCOM, advised that CI support presently being received from the CZFO, 902d MI GP, together with the internal security programs and checks, are adequate in maintaining a good security posture. If at any future date, problems develop which would be considered within the purview of the Internal Counterintelligence Program or any other security support operation, a formal request for assistance would be submitted.

8. (U) ~~(C)~~ CONCLUSIONS AND RECOMMENDATION: After completing a review of the files concerning the J-2/3 DWOC security situation, it was determined that the security posture of the J-2/3 DWOC was adequate. No espionage, subversion or sabotage activities have been detected, and no trends seem to be developing which would lead to weakening the security posture. Taking into consideration the sensitivity of the area and the strict controls utilized by personnel of the activities, it is felt that the routine CI support now being given J-2/3 DWOC is adequate. Based on the information and facts stated, an ICIP operation in the DWOC at the present time is neither warranted nor justified. It is recommended that an ICIP operation not be instituted in the J-2/3 DWOC at this time.

MEMORANDUM THRU: BRIGADIER GENERAL KELLEY /3 Mar 75

FOR: MAJOR GENERAL AARON

SUBJECT: CANTER RIDE (U)

1. (C)

b1

2. (C) Most of the personnel assigned to ASD are scientifically oriented, and it is this scientific orientation that has been considered the primary cause for an uncooperative and lackadaisical attitude toward security. This attitude, coupled with prevailing unfavorable opinions of intelligence personnel in general, results in an environment not suitable to a conventional ICIP operation.

b1

3. (U)(C) A Sensitive Activity Vulnerability Estimate dated 5 February 1974, conducted at the US Army Missile Command, surfaced a number of security shortcomings. Other investigative efforts at this facility have revealed alleged questionable suitability activities on the part of some individuals assigned to ASD.

4. (U)(C) A review of the Sensitive Installation listing reveals that all activities at Redstone Arsenal (with the exception of the US Army Missile and Munitions Center and School) are considered "highly sensitive." A review of the Hostile Intelligence EEI maintained at CIAD revealed that information on missile technology continues to be a high priority Hostile Intelligence EEI.

Further information pertaining to the target is contained at Annex I (Target Information).

b. Objective:

(1) To enhance the security of the directorate by identifying those activities, practices and personnel employed within the target area which have been, and may continue to be, involved in the existent security weaknesses affecting the security of classified defense information within USAMRDEL. Further information pertaining to existent security weaknesses of the target area is contained at Annex J (Security Weaknesses).

(2) To determine the extent, if any, of Hostile Intelligence Service (HoIS) penetration of Redstone Arsenal. Any information pertaining to this subject developed by the operation will be expeditiously passed to the appropriate office of the US Army Intelligence Agency for possible exploitation under the provisions of AR 381-47.

c. Base of Operation: Redstone Arsenal, AL

d. Each individual and source involved in the conduct or control of the operation will be briefed on current policies and constraints pertaining to counterintelligence operations and activities as they concern persons and organizations not affiliated with the Department of Defense.

e. The scope of the operation will not be expanded to cover off-post targets not affiliated with the Department of Defense without prior approval IAW provisions of Appendix B, AR 381-13, dated 30 September 1974, Acquisition and Storage of Information Concerning Nonaffiliated Persons and Organizations.

2. (C) PERSONNEL:

5. (U) ~~(C)~~ COMMUNICATIONS:

a. This OPlan provides for the use of personal meetings, US Postal Service and telephonic contacts to effect necessary communications. The communications system will be designed to assure a continuous and secure means for the transmission of information and will provide for a primary, alternate and emergency channel as follows:

OP-001-75-902
SUBJECT: Internal Counterintelligence Program (ICIP)(U)

(1) Primary: Used for normal requirements.

(2) Alternate: Used to prevent overloading of the primary system or in the event that the primary channel cannot be used.

(3) Emergency: Used only in such instances which require the urgent transmission of information when the primary or alternate systems will not suffice.

b. Details of the communications systems are contained in Annex E (Communications) to this OPlan.

6. (U)(C) TRAINING: The source will be trained jointly by the 902d MI Group and COMPIA in the skills necessary to accomplish his assigned tasks in a secure and effective manner. Source training will be continuous and will be dictated by the experience and background of the source and the operational situation within the target area. Specific minimal training requirements to include the provisions of AR 380-13 and standard Essential Elements of Information (EEI) are contained in Annex F (Training) to this OPlan.

7. (C) b1

8. (C) TERMINATION:

a. Termination with or without prejudice: The source recruited for this operation will be terminated when his usefulness to the operation ceases, he shows indications of insecure practices which could compromise the operation, he is no longer amenable to control, or the operation is terminated. Circumstances under which termination is effected will determine whether termination is with or without prejudice. The terms "with or without prejudice" do not indicate the manner in which the source will be terminated, but rather whether or not the source would be considered for use in future operations of this nature. Circumstances under which termination is effected are outlined in Annex H (Termination) to this OPlan.

b. Commitments: The only commitments to be made to the source will be assurance of personal security and reimbursement for expenses incurred at the direction of the C/O. At termination a severance statement will be obtained from the source in the appropriate format and will include a provision that the source has no further claim.

c. Knowledgeability: b1

b1

9. (U) ~~(C)~~ COORDINATION AND LIAISON:

a. Coordination between Headquarters, 902d MI Group; the Atlanta Field Office; Redstone Resident Office; COMPIA, USAINTA and appropriate personnel at RA has been established and will be maintained on a continuing basis.

b. Coordination and liaison between COMPIA and DA personnel assignments branches has been established to ensure the identification and procurement of a suitable agent for utilization in the operation.

c. Coordination with additional personnel at RA may be determined to be necessary in the accomplishment of the operation. Consideration is presently being made to the possible briefing of the Chief, COMPACT, RA, to ensure proper assignment of the agent. However, as the operation will be conducted under strict "close-hold" rules, the briefing of additional personnel at RA will be accomplished only when deemed absolutely necessary, and upon the approval of the 902d MI Group Commander.

10. (U) ~~(C)~~ Reports:

a. Source administration, operational reports and periodic status reports will be submitted in accordance with reference b.

b. Appropriate USAMICOM representatives will be informed of the information gleaned from the operation as it is developed.

APPENDIX I to ANNEX C, OPLAN OP 001-74-902 DATE: 29 January 1975

PROJECT NAME: CANTER RIDE (U)

SUBJECT: Knowledgeability List

1. The following personnel have full knowledge of the operation:

a. 902d MI Group Personnel

(1) CW4 William Johnson, Chief, Liaison Branch, Pentagon Counterintelligence Force.

(2) SGT Dave Horn, Liaison Branch, Pentagon Counterintelligence Force.

b. USAINTA Personnel

(1) COL William S. Wolf, CDR.

(2) COL Hassel L. Parker, DCDR.

(3) COL William T. Singleton, Chief, CI Div.

(4) LTC Donald B. Grimes, Chief, Special Ops Br.

(5) James Hession, GS-13, Chief, Intel Div.

(6) Gordon Huff, GS-13, Exec Asst to Chief, COMPIA.

(7) Les Hime, GS-12, Civ Adv to Chief, Special Ops Br.

(8) Rocco Melo, GS-13, Civ Adv to Chief, Special Ops Br.

(9) MAJ Joseph S. Kieffer, Chief, COMPIA.

(10) CPT Lawrence A. Edell, Chief, Svcs Sec, COMPIA.

(11) CPT Richard A. Govoni, Chief, Ops Sec, COMPIA.

(12) 1LT James A. Holliday, Svcs Sec, COMPIA.

(13) CW2 Mellberth Bowling, Alternate Project Officer, COMPIA.

(14) CW2 John McNulla, Ops Sec, COMPIA.

(15) WO1 Donald J. Rander, Project Officer, COMPIA.

Annex I (Target Information) to OPlan OP-001-75-902

1. (U) The initial specific target of the operation is the Optical Guidance Technology Office (OGTO), which is an office within the Advanced Sensor Directorate (ASD) located in Building 5400, a restricted area located on Redstone Arsenal (RA). Mr J. Ducote is the director of OGTO and Mr W. J. Linberg is the director of ASD. Neither of these persons is aware of the operation. ASD is one of several directorates under the US Army Missile Research, Development and Engineering Laboratory (USAMRDEL) which is responsible for developing concepts for new missiles. Dr J. McDaniel, Director USAMRDEL, and COL R. A. Axelson, Deputy Director USAMRDEL, have been briefed on the operation. USAMRDEL is, in turn, one of nine directorates which are collectively responsible for the developing, testing and procurement of missiles for the US Army Missile Command (USAMICOM). The CG, USAMICOM, Major General Vincent H. Ellis and the CofS, COL Arthur G. Lange Jr., are aware of the operation.

2. (U) Further information pertaining to RA, USAMICOM, Huntsville and a map of RA are provided in Appendices to this Annex.

THE COMMANDS

U.S. Army Missile Command (MICOM)
U.S. Army Missile and Munitions Center and School (MMCS)
U.S. Army Medical Department Activity (MEDDAC)
Ballistic Missile Defense Systems Command (BMDSCOM)
U.S. Army Engineer Division, Huntsville
Ballistic Missile Defense Advanced Technology Center (BMDATC)
Redstone Readiness Group

Redstone Arsenal is a combination of two U.S. Army arsenals established in 1941, for the production of artillery shells. Today it is the nerve center of the Army's missile and rocket programs.

The 38,650 acres were designated the center of research and development activities for rockets and related items in October, 194 Recruitment of technical and professional personnel began in January, 1949, and a Research and Development Division was establishe the next month.

Redstone Arsenal was declared an active installation by the Department of the Army on June 1, 1949. Some of the Army's rocket exper who had been working at Ft. Bliss, Texas were moved to Redstone in April, 1950. This included the team of scientists and engineer headed by Dr. Wernher von Braun.

Six major Army agencies are now located on Redstone and in neighboring Huntsville. Based on the arsenal are the U.S. Army Missi Command and the U.S. Army Missile and Munitions Center and School. The George C. Marshall Space Flight Center of the Nation Aeronautics and Space Administration is also sited on the arsenal as well as a government-owned, contractor-operated facility engaged i rocket propellant research and manufacture — the Huntsville Division of Thiokol Chemical Corporation.

In nearby Huntsville are the Army's Ballistic Missile Defense Systems Command and Ballistic Missile Defense Advanced Technology Center, The U.S. Army Engineer Division, Huntsville, and the Redstone Readiness Group.

The arsenal's land area includes three minor mountains, 94 miles of railroads, more than 330 miles of roads and more than 2,00 buildings. There is a jet length airfield and modern cargo docks on the Tennessee River, the arsenal's southern boundary. Army buildin and equipment at Redstone are valued at more than $330 million.

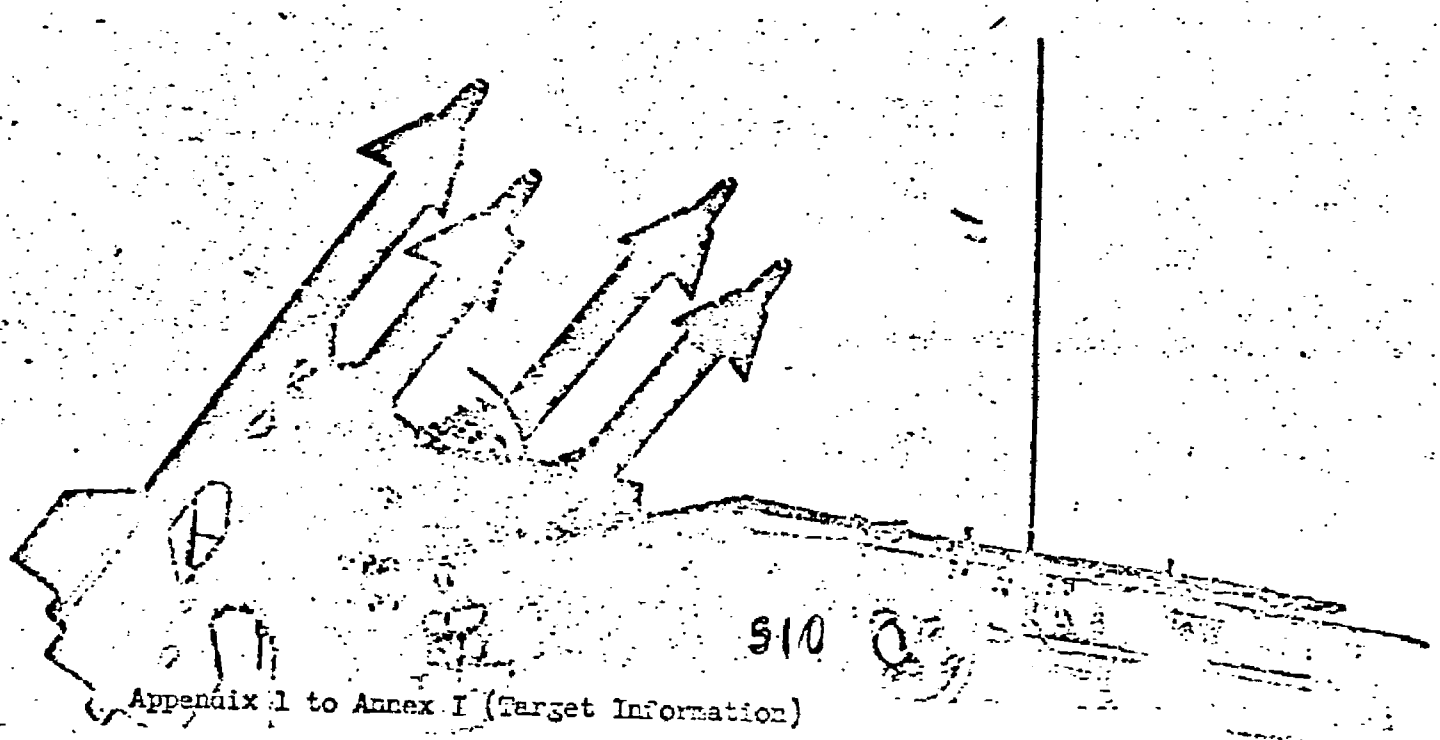
An average of 20,000 vehicles pass through Redstone's gates each day. In an average month, some 8,000 transient visitors are badge through the control facilities to do business or tour one or more of the government agencies on the installation.

The arsenal has a daily government and contractor working population of about 25,000. Although no civilians live on the arsenal, mo than 1,000 military families reside in government quarters. Approximately 1,500 children of military personnel residing on the installati attend schools in Huntsville.

Civilian employees working for the Department of the Army at Redstone and in Huntsville number about 10,000. Approximately 4,0 soldiers are assigned to the various Army commands and agencies. The total Army payroll at Redstone and in Huntsville exceeds $2 million.

Nearly $2 billion was spent last year by the Army at Redstone and in Huntsville. About 85 percent of the amount went to Americ industry, principally through contracts to companies for missile system research, development and production.

This is an excerpt from Redstone Arsenal, dated 1974, an unofficial guide published by Military Publishers, a private firm in no way connected with the Department of the Army.



Appendix 1 to Annex I (Target Information)

[illegible] a major command of the U.S. Army Materiel Command, has its headquarters at Redstone Arsenal and also runs the installation.

MICOM is responsible for missiles and rockets and the supporting equipment required to field them as weapon systems. The command's mission includes research, development, engineering, testing, procurement, production and logistics support of operational missile and rocket systems.

Activated in 1962, MICOM combines the facilities, personnel and missions of several predecessor Army organizations which, at the same location, have directed the Army's expanding missile and rocket activities at Redstone Arsenal for more than 25 years.

Its predecessors fielded the Army's first generation missile and rocket systems and made major contributions in the late 1950's to early American space exploration efforts — including the launching of our first scientific earth satellite. NASA's major space vehicle development organization, the Marshall Space Flight Center, also located at Redstone, was activated in 1960 from a nucleus of former Army civilian employees at Redstone. The Safeguard ABM system also began as a research and development program managed by one of MICOM's predecessors.

MICOM's programs today include a full spectrum of weapon systems ranging from man portable ground-to-air and anti-tank missiles to the 400-mile range Pershing Missile. Its research and development team pioneered the emerging technology of "smart" or precision guided munitions, artillery shells, bombs, rockets and missiles that home on their targets.

MICOM is also the center of Army effort to advance high energy laser technology.

Although the command's responsibilities are worldwide, most of its experienced team of about 7,000 soldiers and civilians are at Redstone Arsenal. The command's test ranges, laboratories, buildings and highly specialized equipment comprise a total investment of about $400 million. Its annual budget averages more than one billion dollars including funds covering acquisition of missiles and rockets for the U.S. Army as well as many allied nations which also employ U.S. Army missiles and rockets.

Missiles and rockets are not manufactured at Redstone Arsenal. Traditionally, the Army has turned to American industry and business for their manufacture, a task managed by MICOM.

MICOM supports an Army Materiel Command element based at Redstone Arsenal: the project office directing the SAM-D advanced air defense system. Soldiers at Redstone Arsenal work with some of the most advanced equipment in the Army. Their daily tasks may range from a research project to training new members of the Army how to repair components of the missile systems. Here, the soldiers perform the technical side of their job and contribute their part toward making their Army truly modern.

This is an excerpt from Redstone Arsenal, dated 1974, an unofficial guide published by Military Publishers, a private firm, in no way connected with the Department of the Army.

511

Appendix 2 to Annex I (Target Information)

HUNTSVILLE . . .

A Good Place to Live

Huntsville, growing from a town of about 20,000 persons to more than 140,000 since 1950, [illegible] many neighborhood environments with both pleasant [illegible]. The [illegible] and blend with the old. The city's [illegible] in the past, yet it is a vital part of the challenging future. With activities for every age. It is a stimulating and [illegible] place to live. The city itself is progressive, fast growing, beautiful and [illegible] to the pulsating space age. Located in the Alabama Tennessee Lakes section, it is convenient to one of the foremost [illegible] in the South. For the history enthusiast, the nature lover, the hunter, the fisherman, the student, the engineer, the businessman, the club woman — it is the place to be and the place to live.

Many military families reside in the city. Assistance to the new family moving into town is available in the Housing Referral Office at Redstone Arsenal. The office maintains files of rentals and homes for purchase in Building 5666. Phone [illegible]. With this referral assistance, the new family can get settled rapidly.

Huntsville offers schooling through college level, as well as special education classes through high school for those who require it. There are three colleges in Huntsville and a soldier can work toward a degree by the many night courses offered.

This is an excerpt from Redstone Arsenal, dated 1974, an unofficial guide published by Military Publications, a private firm, in no way connected with the Department of the Army.

Annex J (Security Weaknesses) to OPlan OP-001-75-902

1. (U) ~~(C)~~ Colonel Arthur G. Lange, Jr., Chief of Staff, US Army Missile Command (USAMICOM) has requested a counterintelligence operation be initiated within USAMICOM to ensure the security of that command with emphasis on security of classified defense information. The chain of event, list of persons involved, and allegations which fostered the request are as follows:

a. Chain of Events:

(1) On 14 May 1974, a SECRET document entitled "Vunerability Assessment of Army Electro Optical Missile Systems (U)", copy 7, dated 7 December 1973, was determined to be missing and has not been found. Compromise was not considered remote.

(2) On 16 May 1974, a CONFIDENTIAL document entitled "Internal Technical Note RE72-35, Digital Simulation of the Texas Instrument's Cannon Launched Guided Projectile (U)", dated 24 October 1972, was found in a desk drawer of Mr b6, a member of OGTO. The document was found in the desk during an after-hours check for SECRET material referred to in para 1a(1) above. The classification markings had been excised from the document. During the investigation for this incident, b6 admitted in his sworn statement that he had found another CONFIDENTIAL document in his desk on 12 June 1974.

(3) During the week of 20 September 1974 another SECRET document entitled "Laser countermeasures/counter counter measures (U)", Progress Report, Pitman Dunn Laboratory, Frankfort Arsenal, was found to be missing and could not be accounted for. The investigation is ongoing and it is anticipated that b6 will be considered responsible and may receive a letter of reprimand and/or a day's loss of pay.

b. Personnel within OGTO and ASD who may be of counterintelligence interest include the following:

(1) b6, GS15, Supervisor, OGTO.

(2) b6, GS12, Physicist, formerly assigned OGTO,

(3) b6, GS14, Aerospace Engineer, OGTO.

(4) b6 nee: b6, GS4, Typist.

(5) b6, GS14, Engineer, OGTO.

(6) b6, GS15, Physicist, OGTO.

(7) b6, GS12 (formerly 1LT), Engineer, OGTO.

(8) b6, Nee: b6, GS5, Clerk, OGTO.

(9) b6, GS11, Electronics Technician, OGTO.

Annex J (Security Weaknesses) to OPlan OP-001-75-902

c. During an investigation into the loss of documents listed above, certain allegations were made which reflected adversely on persons assigned to OGTO, ASD and USAMICOM. In general, the allegations are as follows:

(1) b6 and b6 had a romance although each was married.

(2) b6 conducted herself in a manner to suggest that she was "available" or as a practical joke by sitting in b6 and b6 lap during office meetings.

(3) b6 was so mad that he claimed he would "kill" b6 for "screwing his girl" in reference to b6.

(4) b6 believes b6 placed CONFIDENTIAL documents in b6 desk because of jealousy.

(5) b6 alleges there is a meeting place for sexual activities by b6 and other members of the office.

(6) Pornographic films shown in this meeting place during office lunch hours.

(7) b6 and b6 took two secretaries to this meeting place during lunch.

(8) Office calls and contacts with a Marge Cleveland, now deceased, who was called "Bucking Bronco".

(9) Homosexual tendencies by b6.

(10) b6 intoxicated on the job.

(11) b6 used to place persons under obligation.

(12) b6 and b6 procuring secretaries for sex.

(13) Someone placed sugar in the gas tank of b6's truck and dameged the motor. b6 alleges that it was b6.

2. (U) Further information to include sworn statements are on file at Headquarters, 902d MI Group, and COMPIA, USAINTA.

4. (U) ~~(C)~~ Section II. Findings.

a. USAMICOM, a subordinate command of the US Army Materiel Command (AMC) is commanded by Major General Vincent H. Ellis, and has been classified as a "Highly Sensitive" Class II Installation by the Department of Army. In addition to the requisite Table of Organization and Equipment, logistical, and administrative support elements, USAMICOM consists of various US Army Missile Systems project offices, a contingent of missile systems Liaison Offices with foreign allied military forces to include Senior Staff Technical Representatives stationed at CONUS and OCONUS installations, a complement of special activities, such as the US Army Metrology and Calibration Center and the Missile Intelligence Agency, and six sensitive Directorates, three of which are considered "critically sensitive" by USAMICOM. This category applies to the USAMRDEL, the Directorate for Procurement and Development (DPP), the Directorate for Product Assurance (DPA), and the Missile Intelligence Agency (MIA). The mission of these Directorates is directly related to the crucial phases of research and development of all current and future missile systems in the US Army and to the contracting to appropriate firms for production. The Advanced Sensors Directorate (ASD) of the USAMRDEL is of specific interest to this study as indicated in references listed in paragraph 1, above.

b. USAMICOM has a significantly large number of civilian employees and assigned military personnel, who by the nature of their duties, require access to critically classified defense information and material. Suitability shortcomings such as drug and alcohol abuse, possible homosexuality and immoral activity, and excessive indebtedness, all of which have been alleged against USAMRDEL personnel, serve to create a fertile field for Hostile Intelligence (HoIS) offensive intelligence operations against the Command. The human element of USAMICOM, therefore, must be considered particularly vulnerable to the security of the Command. The desirability of advanced knowledge of the US Army missile systems must be considered lucrative to HoIS. By obtaining this type of information, the efficiency of these systems in a future battlefield environment could be impaired and thereby adversely affect the national defense of the United States. In a Sensitive Activity Vulnerability Estimate (SAVE), dated 5 February 1974, conducted at USAMICOM, a number of violations and shortcomings were noted in the above critical directorates. A synopsis of the SAVE and other incidents which have occurred in USAMRDEL subsequent to the SAVE, follows:

5 9

Page 2016 of 3957

CONFIDENTIAL

MIIA-IA-O 12 November 1974
SUBJECT: CANTER RIDE Feasibility Study (U)

(1) In MIA, SECRET material was discovered in containers which also contained unclassified material. SECRET documents were also stored in unauthorized security containers. Accountability for classified documents in MIA is maintained on Automatic Data Processing (ADP) equipment which is also used extensively for routine office functions. This practice has been continued despite the fact that the classified document custodians are not properly trained in ADP security procedures.

(2) Most document custodians are not knowledgeable of the provisions of DoD Regulation 5200.1-R or AR 380-5 and other AMC and USAMICOM security regulations.

(3) Personnel of USAMICOM are not receiving proper security indoctrination instructions in accordance with applicable regulations. There is a general lack of security consciousness throughout the Command, but is especially evident amongst the civilian, scientific-oriented personnel, who refuse to properly wear and display their security badges or assist in sound security practices and procedures.

(4) Conference rooms utilized to discuss classified information are not properly secured and maintained. No record of CI Technical inspections for sensitive areas and conference rooms was available.

(5) There is an inadequate number of qualified Security Support Specialists assigned to USAMICOM. USAMRDEL shares such a support officer with three other Directorates or project offices.

(6) Classified Document Custodian duties within USAMRDEL are normally assigned as an "extra duty". This practice fosters resentment of the responsibility on the part of personnel assigned the task. This has resulted in poor administration of the control of classified documents, a factor which significantly contributed to the loss of seven SECRET documents in USAMRDEL. In each case, it was determined that the fault was an administrative error on the part of the custodian. Subsequent to the above incidents, on 14 May and 20 September 1974, two more classified documents were discovered missing from OGTO, the office within USAMRDEL referenced in 1a, above. The 14 May violation was discovered during a non-duty hours check. In this instance, a CONFIDENTIAL document was found in a desk. The classified markings had been removed. The 20 September incident occurred after a 100% inventory and resulted in a reprimand and possible loss of one day's pay for b6 b6 GS-15, upon whom the responsibility for the loss was fixed.

(7) Uncleared personnel have access to Building 5400, a RESTRICTED AREA, which houses in part USAMRDEL and in particular, the Advanced Sensors Directorate and OGTO. The Building's Cafeteria employees do not have security clearances yet they have entrance badges. These badges do not identify the bearer since they have neither the picture nor the name of the individual. No roster is maintained of these personnel.

Singularly, the above infractions and violations do not justify the use of a SCOPI asset. Collectively, however, these security problems constitute a serious threat to the security of the Command as similar situations exist in most of the other critically sensitive Directorates. In addition to the above security problems, the Request for Special CI Support, reference in 1b, above, outlines a serious suitability problem which allegedly involves the entire office staff of OGTO.

5. (U) ~~(C)~~ Analysis.

a. Based upon the Findings as outlined above, a SCOPI is believed to be the most advantageous investigative tool to assist the requestor Command because the local Military Intelligence personnel are highly visible in the area and do not have at their disposal the resources necessary to provide the Commander of USAMICOM indepth CI support. The RRO has two enlisted agent personnel and one MI Officer present for duty. This office conducts 36 CI Inspections and Checks of USAMICOM and the US Army Munitions School and Center units annually. The inspected elements have an aggregate of over 100,000 SECRET documents and approximately three linear miles of CONFIDENTIAL material. About 350 classified document custodians routinely maintain these documents. In addition to being tasked to conduct SAVE studies, the RRO is tasked with normal liaison contact, suitability investigations, incident investigations, occasional PSI investigations, and security indoctrination briefings when time permits. Even though these accumulative services benefit the Commander in terms of CI Support, RRO personnel have noted that corrective follow-up actions concerning reported infractions have proven to be of a temporary nature. This has been evidenced by the recurrence of similar violations and infractions during a short period of time following the conduct of CI services. The local CI effort has been hampered by the existence of a large number of uncooperative and apathetic scientifically oriented personnel in the Command. The attitude of these personnel toward sound security practices and procedures can only be described as uncooperative and lackadaisical. It is therefore considered highly unlikely for the RRO to be successful in conducting an ICIP operation in the area. Additionally, past intelligence related investigations concerning USAMICOM personnel has fostered an unfavorable attitude toward intelligence personnel in general. The following details the procedures through which personnel are acquired in USAMRDEL.

MIIA-IA-O 12 November 1974
SUBJECT: CANTER RIDE Feasibility Study (U)

b. There are 162 civilian personnel assigned to the Advanced Sensors Directorate. The director is Mr. William J. Lindberg, GS-15. Seven of these civilians normally perform duties in the Optical Guidance Technology Office, which is the specific target area of the requested support as outlined in above references, under the supervision of Mr. b6 GS-15. The General Schedule rating of the Directorate's employees range from GS-1 to GS-16. The majority of ASD personnel perform duties related to research and development which are highly technical in nature. When deemed necessary, all personnel of USAMRDEL are subject to being required to perform functions in other Directorates and Offices to fulfill specific project requirements. However, in instances wherein additional manpower must be procured from resources outside of USAMICOM, the request for Personnel Action (SF Form 52) may be initiated by the respective office supervisor or the Director of the Directorate concerned. The request must be staffed through the appropriate chain of command within the Directorate to the Civilian Personnel Office (CPO), USAMICOM. The request is then reviewed by the CPO Technical Services Branch, where it is recorded in the Personnel Control Roster. Following this action, the request must be reviewed by the CPO Position/Pay Management Branch, where it is closely reviewed to determine the correctness of the pay grade and job description. From that Branch, the request is forwarded to the Recruiting and Placement Branch for recruitment action. In any event, positions are normally filled from personnel listed on the DoD Stopper List, local RIF lists, internal promotion, lateral transfer or direct hire.

c. Requisitions for military and civilian personnel for assignment to USAMICOM are unique in terms of routine requisition assignments in other commands of the US Army. All assignments to USAMICOM are dictated on the basis of current and future project requirements which fluctuate according to the mission, necessity, and special qualifications of desired personnel. This system is known as Project REFLEX. It provides authority to fill temporary or permanent positions for the duration of a specific project at the completion of which the individual may be reassigned or shifted to another office within USAMICOM.

d. There are only three authorized military positions within the Advanced Sensors Directorate. One of these positions is a LTC, MOS 2157 (Research and Development Coordinator), located at White Sands Missile Range, New Mexico. The remaining two, a 2LT, MOS 7302 (Physicist) and a CPT, MOS 7601 (Electrical Engineer) are assigned to Redstone Arsenal. These positions are currently filled. Requisitions for US Army personnel assigned to ASD or the USAMRDEL are submitted by the Consolidation of Military Personnel Activities (COMPACT), USAMICOM to AMC on a Projected Requisition Authority (PRA). The need for personnel is determined by COMPACT, who subtracts or adds gains and losses using current personnel strength figures which are compared with the

PRA account. Should it be determined that a shortage of personnel exists, COMPACT may then submit the requisition to AMC who, in turn, submits the request to DA. Personnel can be assigned either directly to the USAMRDEL, or to COMPACT on DA orders for further assignment within the Command.

e. As a minimum, a SECRET security clearance is required for all civilian and military personnel assigned to USAMRDEL. Upon arrival of military personnel in the Command, the Clearance and Intelligence Branch, Internal Security Division, COMPACT reviews the individual's 201 file, Medical and Dental Records. This is a routine procedure conducted to determine the person's eligibility for a security clearance. The individual must fill out a locator card, a request for security clearance statement, and a local office personnel data card. COMPACT determines the degree of clearance required, based on the sensitivity of the position to which the individual is to be assigned. If a valid DA Form 873 (Certificate of Clearance and Security Determination) is in the individual's file, and no derogatory information is revealed in the files review, a SECRET clearance is normally granted. Should the file not contain a valid 873 form, appropriate action is initiated for verification of security clearance data through USAIRR. Although contrary to routine procedures, the USAIRR Dossier may be requested for review.

f. Due to the highly technical nature of the civilian positions within ASD it is not considered feasible to [b1] into any of these positions. Because the three authorized military positions within ASD are currently filled, an alternate military position must be considered for [b1] The viability of utilizing a SCOPI asset in ASD under the guise of a Classified Document Control Officer (CDCO) appears highly favorable since the Command plans to centralize the classified document control unit within ASD and acquire a properly trained classified document custodian to maintain the documents. This position has Command sanction as it would serve to decrease the recurrent difficulties experienced by the Command in the control of classified material and would be widely accepted by ASD personnel because of their dislike for performing the extra duties as a CDCO. Through the use of Project REFLEX,

MEMORANDUM THRU: VICE CHIEF OF STAFF, UNITED STATES ARMY

MEMORANDUM FOR: UNDER SECRETARY OF THE ARMY

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

1. (U) This is in response to your Memorandum on 17 January 1975 to the Vice Chief of Staff in regard to subject and serves as the Quarterly ICIP Report for the 2d Quarter, FY 2975.

2. (U) (C) On 2 October 1974, I directed a review of the entire ICIP program with a view towards the elimination of those no longer considered of sufficient merit to warrant retention. The criteria used in evaluating each ICIP operation was: (a) The sensitivity of the installation/activity is such that some type of special counterintelligence support is required or (b) There is a known threat of sufficient magnitude to the installation/activity to warrant a need for some type of special counterintelligence support and (c) The information desired cannot be obtained except through the use of confidential sources.

3. (U) (C) Based on this review and considering your 17 January guidance, I directed the termination of 12 ICIP operations at the following headquarters:

a. Hq, US Army Communications Command, Fort Huachuca, Arizona (CANAL ROPE).

b. Dugway Proving Ground, Utah (CANARY STONE).

c. US Army Air Defense Center, Fort Bliss, Texas (CANTINA ARCH).

d. Umatilla Army Depot Activity, Hermiston, Oregon (CANYON ROSTER).

e. US Army Mobility Equipment Research and Development Center, Fort Belvoir, Virginia (CENTAUR SALE).

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP (U)

OFFICE SYMBOL: DAMI-DOI-C

SUSPENSE:

DATE: 31 January 1975

ACTION REQUIRED: To respond to tasking from the USofA pertaining to ICIP.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. BACKGROUND:

a. At the direction of the USofA quarterly reporting of ICIP has been furnished to him through the VCSA since February 1972. In a memorandum to the VCSA (RED TAB B), the VSofA suggests that in more than half of the ongoing operations, no useful information was developed. He directed a detailed review of the benefits derived through the program over the last two years.

b. On 29 January 1975, the ACSI directed the termination of 12 of the 19 ongoing operations. They will be terminated on a time phase basis with all 12 being terminated by 31 March 1975.

2. DISCUSSION: At RED TAB A is a memo through the VCSA to the USofA replying to the comments of USofA and providing the requested information pertaining to the program.

3. RECOMMENDATION: That the memo at RED TAB A be approved and signed.

OFFICE OF THE UNDER SECRETARY
WASHINGTON, D.C. 20310

17 January 1975

MEMORANDUM FOR: VICE CHIEF OF STAFF, U.S. ARMY

SUBJECT: Internal Counterintelligence Program (ICIP)

I have received and reviewed the latest quarterly report of ICIP operations during 1974 as requested. In 1972 the Under Secretary authorized a trial run of this subject program. Judging from this report, the program has grown considerably and includes installations that I did not appreciate were considered sensitive. A cursory review of the data presented suggests that in more than half the cases, no useful information was obtained.

It would appear to me appropriate to review the results of this experiment to date in order to establish that the program is in fact of such a value that it should be continued in the future.

I would therefore appreciate a detailed report documenting all of the benefits, information, etc., that have been obtained through this program over the last two years. It would also be helpful to have a statement for each listed installation of the sensitive character of the mission that necessitates an ICIP operation. Finally, I would appreciate an indication of your subjective judgment as to how many of the issues that arose from these ICIP efforts would not have otherwise come to our attention.

WASHINGTON, D.C. 20310

29 November 1974

MEMORANDUM FOR: UNDER SECRETARY OF THE ARMY

SUBJECT: Internal Counterintelligence Program (ICIP) Operations (U)

1. (U) Reference is made to memorandum, Under Secretary of the Army, dated 8 February 1972, subject as above.

2. (C) During the third quarter of CY 1974, the ICIP at Edgewood Arsenal Maryland (CANAL LOOP) was combined with the Aberdeen Proving Ground ICIP (GONDOLA STAR). The nickname GONDOLA STAR was retained.

3. (C) With the subsidence of anti-military activity at Fort Lewis, Washington and in the absence of a specific on-post threat, the Commanding General, 9th Infantry Division requested that the Fort Lewis ICIP (CENTAUR RACE) be terminated. This ICIP was inactivated on [illegible] 74. During the same time frame, LENS HOLDER, a new ICIP developed at White Sands Missile Range was approved on 7 Aug 74. With the implementation of this ICIP, the total number of active ICIP operations at close of the quarter was 19. Brief status reports are attached.

4. (C) After briefing you on 25 September 1974 on the status of the program, the Assistant Chief of Staff for Intelligence personally viewed and revalidated each on-going operation. Each operation will be revalidated on an annual basis hereafter. Additionally, MI Army has initiated a systematic review of all source dossiers to insure that sources possess sufficient maturity and stability to enable them to function efficiently and effectively in ICIP operations.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 12 July 1976

ACTION REQUIRED: To obtain Actg ACSI approval for termination of three and retention of one ICIP.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) Background:

-- Para 3, DAMI-DOH ltr, 8 June 76 (TAB B) and USAINTA reply, MIIA-SO-SA ltr, 25 Jun 76 (TAB C).

2. (U) Discussion:

-- (U) Cdr, 902d MI Group reviewed ICIP, GONDOLA STAR and requested termination effective 30 June 76.

o (U) Confidential sources used in GONDOLA STAR terminated.

o (U) Supported commanders, Edgewood Arsenal/Aberdeen Proving, briefed and concurred in termination. Commanders will be supported by 902d MI Group under DSCCP.

-- (U) Cdr, 525th MI Group reviewed CANVAS TAX (Sierra Army Depot), LENS HOLDER (White Sands Missile Range), and LENTILE MONKEY (Defense Language Institute) to determine possible termination and/or replacement with a program similar to DSCCP.

(U) Cdr, 525th recommends termination CANVAS TAX and LENS HOLDER effective on 31 Aug 76. A DSCCP will be established for Sierra Army Depot and White Sands Missile Range by them.

-- (U) Present techniques used by LENTIL MONKEY best suited to provide required support to Defense Language Institute. LENTIL MONKEY continues to be productive.

(U) LENTIL MONKEY revalidated effective 1 July 76.

3. (U) Recommendation: That ltr (TAB A) to USAINTA be approved and signed.

DATE: 2 June 1976

SUBJECT: Army Counterintelligence Program (ICIP) (U)

ACTION REQUIRED

To obtain formal ACSI approval for termination of three ICIP operations.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) Background:

Contained in USAINTA's 3d Quarter, FY 1976, ICIP Operations Report, 11 May 76, was recommendation to terminate three operations: CANINE PLATE (U) at Seneca Army Depot; CENSUS TIME (U) at Pentagon Telecommunications Center and CENTAVO KID (U) at Harry Diamond Laboratories.

-- USAINTA recommendation based on 902d MI Group review of ICIP's to determine advisability to terminate these ICIP's and replace them by an overt direct support comprehensive CI program.

2. (U) Discussion:

-- After a thorough review of the ICIP report on these operations, it is determined that they can be terminated with no adverse affect on the installations served. Installations concurred.

-- Increased overt liaison with additional security support will be provided the installations by the 902d MI Group. 902d MI Gp Pamphlet No. 381-3, dated 22 Apr 76, outlines the Direct Support Comprehensive Counterintelligence Program (DSCCP) (TAB C) outlines overt liaison procedures without employing confidential sources.

-- ICIP Reports on CANINE PLATE (U), CENSUS TIME (U) and CENTAVO KID (U) are attached at TAB B.

-- With the termination of these ICIP's, there remains four active CONUS ICIP operations.

-- Ltr to USAINTA at TAB A, furnishes formal termination of these ICIP's and instructs USAINTA to conduct review of the remaining four ICIP's to determine need for continuance, and to forward results and recommendations to this office NLT 21 June 1976.

ICIP REPORT

1 April 1975 to 31 March 1976

(U) CANINE PLATE: (OACSI Revalidation - 4 Feb 75)

a. Location: Seneca Army Depot (SAD), Romulus, NY.

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 to 31 Mar 76: There was no significant information obtained during the period and there were no indications of any overt threat to the installation.

d. Operational Status: CANINE PLATE was first approved by OACSI, DA, for implementation on 18 Sep 73. During the reporting period 400 manhours were expended in the ICIP. However, there were no reports submitted, no funds expended, neither TDY nor ICF. There were no confidential sources utilized, only conventional sources.

e. Comments: The installation's mission remains the same, a supply depot for missile and artillery weapons systems with a nuclear capability. The Depot is considered a critical and sensitive installation; therefore, remains as a potential target for HOIS. However, there was no information reported to indicate the presence of any overt threat to the installation. The MI Group has been conducting a thorough review of the ICIP to determine the advisability of terminating the operation.

f. Recommendation: That the ICIP CANINE PLATE be terminated but that increased overt liaison with additional security support be provided the installation commander.

ICIP REPORT

1 April 1975 to 31 March 1976

(U) CENSUS TIME: (OACSI Revalidation - 4 Feb 75)

a. Location: Pentagon Telecommunications Center (PTC), US Army Communications Command (USACC), The Pentagon, Washington, DC.

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During the Period 1 April 1975 to 31 March 1976:

(1) An ICIP source reported that a PTC civilian employee was transferred from the coding and decoding section because he had coded an obscene message that was to be sent to an overseas user. Additionally, the ICIP source provided information concerning possible security violations involving the employee. Because of the employee's questionable suitability characteristics and conduct he was assigned to a job in PTC requiring minimum contact with classified information. Supervisors will continue to monitor his conduct and activities.

(2) An Army NCO assigned to PTC attempted to commit suicide by slashing his wrists. As a result of the information gained concerning the suicide attempt a Limited Investigation was initiated. The NCO was assigned to the Logistics Branch, PTC, pending results of the investigation. The investigation revealed that the NCO has a large number of outstanding debts, has lied on loan applications, and had ordered a 1976 automobile which cost in excess of five thousand dollars. Interviews concerning the NCO revealed alleged drug usage and homosexuality. The Limited Investigation was completed and referred to PTC for adjudication. The decision was made not to revoke the NCO's security clearance since he left the service on 9 April 1976 and will not be allowed to re-enlist.

(3) Adverse suitability information was reported on two additional NCOs assigned to PTC. Based on medical reports and rebellious attitudes one NCO was released from the Army by board action. The second NCO after a night of heavy drinking began hitting his wife when she tried to arouse him after he had "passed out." The wife filed assault charges with the Military Police but withdrew them later. The PTC commander counselled the NCO on his drinking and marital problems and assigned him duties where he has no access to classified information.

DECL

551

(4) During the course of an investigation of an enlisted WAC member of PTC who was away-without-leave (KAWOL Investigation), it was discovered that the CID was also investigating her for theft and trafficking in drugs. The MI representative and CID agents coordinated their mutual investigations. PTC has suspended the WAC's access to classified material pending completion of the investigation.

d. Operational Status:

(1) CENSUS TIME was first approved by OACSI, DA, for implementation on 5 Feb 74.

(2) During the period of 1 April 1975 to 31 March 1976, 726 manhours were expended, no TDY nor ICF funds were used. The operation produced seven information reports. One confidential source was used during the period but was terminated during the latter part of the period.

e. Comments: The PTC operations include an extremely high volume of multimedia ultra sensitive compartmented classified traffic processed at the highest level of the military establishment command group being served, and includes the cryptographic operation, maintenance and logistical mission and support rendered to the JCS, the NMCC, departments and executive agencies of the government allied embassies, and the United Nations Building in New York. The installation remains as a potential target for HOIS; however, there was no information reported to indicate the presence of any overt threat to the installation. The MI Group has been conducting a thorough review of the ICIP to determine the advisability of terminating the operation and implementing an overt direct support comprehensive counterintelligence program. In view of the above the continuation of an ICIP is not warranted at this time.

f. Recommendation: That the ICIP CENSUS TIME be terminated and an increased overt liaison with additional direct security support be provided the installation commander.

ICIP REPORT

1 April 1975 to 31 March 1976

(U) ~~(S)~~ CENTAVO KID: (OACSI Revalidation - 4 Feb 75)

a. Location: Harry Diamond Laboratories, (HDL), Adelphia, MD

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 - 31 Mar 76:

(1) Information was received that a First Secretary at the USSR Embassy, Washington, DC had visited HDL on two occasions. On one occasion he attended a meeting of the Institute of Electrical and Electronics Engineers, INC., a professional society for engineers which was held in the auditorium of HDL. The subject matter presented during the meeting was unclassified. At a second meeting of the society the Soviet Embassy official was denied entry. A report of the incidents were provided to the FBI and the Commander, HDL, made a determination that the society could no longer hold meetings at HDL in order to preclude any potential security threat.

(2) On two occasions an unidentified light aircraft flew over the test site, Woodbridge Research Facility (WRF), HDL, where a series of tests on foreign equipment under the Range Emory program was in progress. In both instances the aircraft circled over the Range Emory test cite for about 5-7 minutes. The overflights are being investigated in coordination with the FBI.

(3) An employee, HDL, made allegations of immoral activities by members of the HDL Security Office and a group at the Van Ness Avenue Facility, HDL. The employee claimed that she was being followed by members of the HDL Security Office. After investigating the employee's story, the Commander, HDL, believed that she was suffering from psychiatric problems and would have her visit a psychiatrist for a complete evaluation.

(4) Suitability information concerning an employee of the Woodbridge Research Facility (WRF) a branch of HDL located in Woodbridge, VA, involved a problem of alcohol abuse. After counseling, the employee participated in a rehabilitation program.

[redacted]

REGRADED UNCLASSIFIED
ON SEP 5 1997
BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

[redacted]

(5) A courtesy penetration test of HDL's Adelphi Facility was conducted and revealed several security weaknesses which were corrected by the supported command. As a result of the test a number of security guards were transferred and guard procedures were changed. In addition a new magnetic coded badge was approved for purchase in FY 77. As a follow-up implementation of "Lessons Learned" in the penetration test the ICIP Project Liaison Officer (PLO) and the HDL Security Officer prepared and delivered a series of lectures and classes to the HDL guard force on the penetration test. Additionally, the PLO delivered lectures on the penetration test to the faculty and students of the Counterintelligence Dept, US Army Intelligence Corps School, Fort Huachuca, AZ.

d. Operational Status

(1) During the reporting period 880 manhours were expended, 18 information reports were submitted and 41 memorandums were prepared and provided to the supported commander.

(2) No TDY or ICF funds were expended.

e. Comments

(1) ICIP CENTAVO KID was approved by OACSI, DA, 18 Oct 73 and the supported commander was briefed on the implementation of the operation on 12 November 1973.

(2) The mission of the HDL includes critical sensitive research and development activities in support of the US Army. Some of the more sensitive activities include research into the hardening of communications equipment against nuclear weapons radiation; tests of nuclear warhead and missile systems to determine their ability to withstand nuclear weapons radiation; develop fuses for use with nuclear warheads and conducts development and testing of radiation hardened systems for Minutemen and Poseidon Missiles.

(3) The installation remains a potential target for HOIS and the hostile intelligence service have an interest in the research and development activities of the type conducted at HDL. However, the amount of significant information surfaced by the ICIP does not warrant the expenditure of manhours at this time to continue the ICIP.

(4) The MI Group is reviewing the ICIP with a view of terminating the program and instead implementing an overt direct support counterintelligence program.

f. Recommendation: That the ICIP CENTAVO KID be terminated and an overt direct support counterintelligence program be implemented.

DEPARTMENT OF THE ARMY
Headquarters, 902d Military Intelligence Group
Fort George G. Meade, Maryland 20755

902d MI Group Pamphlet
No. 381-3

22 April 1976

Military Intelligence

DIRECT SUPPORT COMPREHENSIVE COUNTERINTELLIGENCE PROGRAM (DSCCP) (U)

1. (U) REFERENCES: See APPENDIX A.

2. (U) PURPOSE: This pamphlet establishes policy, guidance, and standardized procedures for the conduct of all-source, multi-discipline counterintelligence support within the 902d MI Group's area of operation.

3. (U) GENERAL:

a. The Commander, 902d MI Group, has the responsibility to notify commanders of Army installations and units in the group's area of operation when:

(1) Any situation or condition exists that poses a threat to the internal security of that Army element.

(2) Any situation exists that might adversely affect the commander's capability to perform his mission.

(3) Information indicates a probable employement of military resources to counter a threat to the installation.

In order to acquire information of situations or conditions that may pose a threat to the supported commander, field elements must aggressively seek it and not wait for it to be reported through normal sequence of events. This is particularly essential for those units/installations declared to be critical sensitive.

b. The DSCCP is one of a series of graduated intensity counterintelligence programs designed to provide the proper coverage based on the security vulnerability of a particular installation. In relationship to other graduated counterintelligence programs listed in USAINTA Regulation 381-100, the DSCCP would, in certain instances, serve as a means of identifying the need for programs of greater intensity such as SVAs, or SAVEs, or, in other instances, may serve as follow-up support subsequent to such intensified services. It provides the broad spectrum of coverage to include a multi-discipline approach with provisions that the information gathered be reported expeditiously to the responsible commander. The program systematically focuses on providing threat information on the most critical area within the target installation in order to provide the required information to the supported commander.

555

CLASSIFIED BY: CDR USAINTA
EXEMPT FROM GENERAL DECLASSIFICATION
SCHEDULE OF EXECUTIVE ORDER 11652
EXEMPTION CATEGORY: 2
DECLASSIFY ON: 31 DECEMBER 2000

~~CONFIDENTIAL~~

c. This program is not synonymous with, nor is it identifiable with, the Internal Counterintelligence Program, Special Operations as defined in FM 30-17A, or the Special Covert Operational Personnel Insertion (SCOPI) as defined in USAINTA Regulation 381-100.

4. (U) CONCEPT:

a. The Direct Support Comprehensive Counterintelligence Program (DSCCP) is an overt, dedicated counterintelligence security support program with the objective of detecting or anticipating situations and factors from any source (HUMINT/SIGINT/PHOTINT) which are or may become detrimental to the security posture of the supported installation. It employs a Direct Support Special Agent (DSSA) in an overt continuous role of acquiring information and providing it to the commander in a timely manner, while concurrently providing sound recommendations for the reduction and/or elimination of security hazards, vulnerabilities, or threats posed by hostile factors.

b. The DSSA obtains the required information from overt investigative activities and from a number and variety of sources and contacts within and in the vicinity of the supported installation. Confidential sources are not utilized. He is fully supported in this task by the intervening echelons at Field Offices, Group, and USAINTA.

c. The DSCCP is a complementary service provided to the supported commander to assist him in improving the security posture of his installation. It is not intended to duplicate nor to usurp the functions and responsibilities of the G-2 or of the Security Manager.

5. (U) RESPONSIBILITIES:

a. The Commander, 902d MI Group, is the approving authority for all DSCCP operations conducted within the group's area of operation.

b. The S3, 902d MI Group is responsible for the following:

(1) Coordinating the selection of units/installations as candidates for DSCCP with the appropriate USAINTA staff elements.

(2) Monitoring DSCCP operations on a continuing basis and periodically informing appropriate USAINTA staff elements of their progress.

(3) Conducting an annual review of each DSCCP operation to determine if it is still necessary and if so, to asure that it remains viable.

c. Field Office Commanders are responsible for the following:

(1) Initiating proposed DSCCP operations for installations located within their areas of operation.

(2) Conducting DSCCP operations within their area after approval by the Group Commander and coordination with the supported commanders.

(3) Designating the DSSA for each DSCCP operation, providing follow-up support, and arranging for DSSA clearance and access to compartmented information as required.

(4) Briefing of the supported commanders on the results of DSCCP operation at regular intervals per mutual agreements.

(5) Establish procedures to maintain continuity of the program during absences of the DSSA. When possible, an alternate DSSA will be assigned.

6. (U) PROCEDURES AND SCOPE:

a. (U) The designation of installations or Army elements as candidates for the DSCCP will be a coordinated action between the Field Office Commander and the supported commander. In some cases, the action may be directed by the Group Commander or USAINTA following a request for special counterintelligence support from a major commander. Regardless of the origin of the request, DSCCP operations will always be conducted with the full consent and knowledge of the supported commander.

b. (U) The selection of installations to be considered for the DSCCP must be discriminatory and based on a genuine need for this manpower intensive service in order to avoid over-commitment of assets. The target installation must be one that is on the ACSI Sensitive Installation and Unit List (SIUL) and one that is a potential or actual target of hostile intelligence services. It is recognized that some field offices and resident offices have numerous sensitive installations in their area, many of which may be categorized as critical. Therefore, it is essential that each FO/RO maintain a listing of these installations in order of priority. In determining the order of priority, factors such as mission sensitivity, and impact of compromise on the security of the United States, etc., will all have to be analyzed and a value judgement must be made based upon actual knowledge of the local conditions, as to which installation has a greater need for special support. The installations heading the list will get first consideration.

c. (U) Proposed concept will be submitted to the Group Commander by letter for approval. The letter will indicate the installation commander's concurrence in the program. The concept will contain a listing of missions, sensitivities, and those internal and external factors which may pose a threat to the installation. Vulnerabilities to human sources,

communications intercept, overhead and ground photography, and other appropriate technical/scientific factors will be included if known. This information will be extracted from the target analysis (Para 7a) or from the SVA if one has been completed. The concept must address actions to be taken to detect and counter these threats.

d. (U) Occasional expenditures of ICF in support of this program is authorized and will be processed in compliance with the provisions of AR 381-141 and USAINTA Regulation 381-1. Recurring expenditures will be supported by a formal request for authority if such expenditures are anticipated.

e. (U) The conduct of investigations of and storage of information concerning persons and organizations not affiliated with the Department of Defense are prohibited unless authorized under the provisions of AR 380-13.

7. (U) GUIDELINES:

The actions listed below are considered to be minimum essential for the implementation of this program and are not to be considered as all-encompassing. They should be modified as appropriate to meet situations and needs peculiar to the supported installation. Common sense and experience will likely dictate additional or supplementary means to be employed in order to successfully attain the objective.

a. (U) Conduct a target analysis of the unit/installation to identify, in order of priority, the most critical and vulnerable areas and the multi-discipline threats to which they are exposed. Reference will be made to the following: USAINTA Security Support Bulletins, "THREAT" Manuals, completed SVA/SAVE Reports, CI Survey and Inspection Reports, FBI/MP Crime Statistics and Incident Reports, and Communications Security Reports, when available and applicable. The original copy of the analysis will be maintained at the FO/RO level. Appropriate data will be extracted and included in the initial Quarterly Progress Report. The analysis should be reviewed and updated periodically in subsequent Quarterly Progress Reports.

b. (U) Assign a mature, experienced MI Special Agent as a Direct Support Special Agent (DSSA) to provide all-source direct support to the supported commander or his designated representative. The DSSA must become intimately knowledgeable of the supported command's mission, functions, security status and vulnerabilities. As the program will be overt in nature, the DSSA will be known as the primary USAINTA point of contact to all within the supported units/installations. The DSSA will require a TOP SECRET clearance and an SI/SAO special access.

REGRADED UNCLASSIFIED
ON SEP - 5 1997
BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

[redacted]

c. (U) The task of the DSSA is to develop a sufficient number of sources of information to provide the best possible coverage to the unit/installation and personnel of the element to detect security vulnerabilities, and make sound recommendations for their reduction and/or elimination. The DSSA should work closely with the security manager to coordinate appropriate matters and to avoid duplication of effort. However, care should be taken not to duplicate or usurp functions and responsibilities rightfully assigned to the security manager.

(1) Human sources of information will include Conventional Sources (Incidental, Casual, and Official) and Liaison Contacts as described in Chapter 6, FM 30-17. Confidential Human Sources will not be utilized. Anonymity may be provided through the provisions of the Privacy Act of 1974 when the source so requests. The association between the DSSA and Conventional Sources or Liaison Contacts will not normally be classified.

(2) Maximum use will also be made of Documentary and Technical/Materiel Sources to include, but not be limited to, SATRAN Messages, Department of the Army intelligence publications and/or bulletins; USAINTA Security Support Bulletins and "THREAT" Manuals; SAVE/SVA reports; Military Police Reports, and Serious Incident Reports. Special attention should be paid to message traffic concerning alerts, advisories or warnings concerning events or situations affecting the supported command.

d. (U) A contact card file will be maintained at the supporting office to identify conventional sources and liaison contacts. This file will be integrated into the existing contact card file already established for use in the routine mission of the FO/RO. It must be readily available for DSSA personnel at all times. Individual cards will be annotated when the contact is in support of a specific DSCCP operation. LACs will be conducted on casual sources with the results reflected in the contact card file.

e. (U) Consideration should be given to conducting a systematic review of the dossiers of personnel occupying key and sensitive positions to insure that all such personnel have been properly cleared and to determine if unresolved security matters exist. This issue will be discussed with the supported commander if such a review is deemed necessary, the DSSA should recommend that the commander undertake the action. If the commander requests that the review be conducted by the DSSA, then the matter will be referred to group headquarters where resolution will be made in conjunction with the appropriate USAINTA staff elements. The DSSA may assist the supported command in the review of dossiers but may not take any investigative action to resolve issues. He will advise the supported command to submit requests to USAINTA whenever investigative action is indicated.

[redacted]

Page 2055 of 3957

f. (U) ~~(C)~~ Reporting of Information:

(1) (U) To the local commander: Information of counterintelligence interest affecting the security posture of the unit/installation will be reported to the supported commander or his designated representative in a timely and complete manner. The information may be reported orally, by Agent Report format, or by Summary of Information (SOI) format, as appropriate. While most items of information will be passed on an oral basis only, there may be certain instances when the commander will desire written reports from the DSSA to be later attached as backup information to his Request for Investigation. In these instances, APRs containing the adverse allegation may be passed when the full consent of the sources of the information has been obtained. However, when a source of information desires confidentiality, to protect the source, the DSSA can then pass in the information only on an oral basis or by SOI format. Regardless of the manner in which the information was passed to the supported command, a report of the information provided to the supported command will be summarized in the Quarterly Progress Report to this headquarters with an indication of the actions taken by the supported command (see Para 7h below).

(2) (U) Other: Information of counterintelligence interest to the intelligence community or other agencies will be reported in accordance with established procedures utilizing normal reporting vehicles such as oral reports, Agent Reports, Spot Reports or Summaries of Information as appropriate. Information reports will be classified according to their content. Such reports will indicate when and to whom the information was passed and what action the command has taken or plans to take. Subject blocks, special warning notices and Privacy Act caveats, etc., will be those utilized in established investigative activity procedures. (AR 381-20 and USAINTA Reg 381-100).

(3) (U) When fragmentary information of counterintelligence interest is initially surfaced, the DSSA will attempt to determine whether or not the information is credible prior to reporting it to the supported Commander. Preliminary checks may be made only to the extent authorized in para 3-6, USAINTA Reg 380-100. Should this prove to be insufficient to establish the credibility of the information, the DSSA will then refer the matter to group headquarters for coordination with USAINTA. Credible information concerning a member of the supported command should be used to support a formal Request for Investigation to USAINTA.

(4) (U) The supported commander or his designated representative will be orally briefed on all items of threat information concerning his command, or be provided written reports as appropriate. Examples of the types of threat information include satellite overflights, Soviet bloc

REGRADED UNCLASSIFIED
ON SEP -5 1997

AUTH PARA 1-603 DoD 5200.1-R

22 April 1976

country commercial overflights, communications intercept capabilities/ vulnerabilities from air, ground or water, personnel security vulnerabilities and others as listed below. Depending upon the source of the information and its previous distribution within the intelligence community, the information may be passed laterally or to higher echelons in accordance with established reporting requirements. All information gleaned from the operation will be briefly summarized in the Quarterly Progress Report.

g. (U) A list of EEI will be developed by the DSSA in order to focus specialized coverage on the specific requirements of the local situation and the supported commander. Examples of EEI are attached at APPENDIX B. It should be noted that the EEI contain items of specific interest to the supported commander and other items that pertain to lead material for use by the US Army intelligence community. A copy of the developed EEI list will be attached to the initial Quarterly Progress Report.

h. (U) A Quarterly Status Report in the format contained at APPENDIX C will be submitted to Group Headquarters no later than 10 working days following each calendar quarter. The first report will be due after the completion of the first full quarter of operation after initiation. The report should reflect the developments and progress of the operation, problems encountered, information obtained during the reporting period, future actions contemplated and lessons learned or recommendations as appropriate.

8. (U) Reducing Vulnerabilities: Once a security weakness or hazard has been identified, the DSSA then has the responsibility to make sound recommendations for corrective actions to be taken by the supported commander to reduce or eliminate them. In making these recommendations, the DSSA must use good judgement based upon his background and experience, cost verses absolute security, knowledge of similar instances, common sense, and an intimate knowledge of those technical and/or specialized security services and/or investigations available to the supported commander from other USAINTA elements. Each corrective action must be viable, made on its own merit, be practical and be within the capability of the supported command. USAINTA Security Support Bulletins contain excellent examples of "quick-fix" solutions. In those rare instances when corrective actions cannot be accomplished due to cost restrictions or limited resources available to the command, the commander must be made aware of, and accept the possible security risk(s) involved.

9. (U) It is visualized that situations, incidents or conditions may be uncovered which could have serious deleterious effect on the security

REGARDED UNCLASSIFIED
ON SEP 5 1997
BY CDR USAINSCOM FOI/PO
Auth Para 1-603 DoD 5200.1R

posture of the installation and could not be resolved through the techniques of the DSCCP. In these cases, the matter should be expeditiously referred to Group Headquarters where it will be brought to USAINTA's attention for resolution, considering JCIPs, SCOPEs, Special Operations, or other more sophisticated methods.

10. (U) The application of the DSCCP to a supported installation is a special effort and will probably require the services of the DSSA on a near full time basis with additional manhours of support furnished by FO and Group Headquarters. Consequently, FO Commanders and RO SAICs should proceed with caution in offering this service to commanders to prevent over-extending their resources. Nevertheless, the DSSA approach of the DSCCP is sound and could well be applied to other installations in the area of operations but to a much lesser degree than in the DSCCP. This should be done as a routine matter and no formal approval is required. Thus, one MI Special Agent could become the DSSA to several installations of lower priority.

11. (U) This pamphlet provides policy and guidance for 902d MI Group personnel in the conduct of all-source, multi-disciplined counterintelligence support within the area of responsibility of the 902d MI Group. It complements existing US Army Regulations, USAINTA Regulations and USAINTA policy and guidance. Nothing in this pamphlet shall be construed to contravene or to be in conflict with existing US Army or USAINTA policy. In the event that possible conflicts may arise, the provisions of existing US Army and/or USAINTA policy will apply. Any questions pertaining to possible conflict of the provisions of this pamphlet with existing policy will be addressed to this headquarters, ATTN: MIIA-GPS-AC, for further staffing with appropriate USAINTA staff elements. Comments and recommendations are encouraged and should be submitted on DA Form 2028 (Recommended Changes to Publications) to this headquarters for consideration and staffing.

APPENDIX E TO 902D MI GROUP PAMPHLET 381-3

ESSENTIAL ELEMENTS OF INFORMATION (EEI)

1. (U) GENERAL: In devising EEI applicable to the supported installation, each one of the multi-discipline threats must be examined in conjunction with the mission and situation of the particular target. The actual or potential vulnerabilities thereby conceived become EEI affecting the supported installation. Since each installation has its own specific situation, it is imperative that the DSSA work very closely with a representative of the supported installation in order to arrive at an EEI listing tailored to the specific needs of the command. The references listed at APPENDIX A provide background information and guidance in devising EEI. Many of the areas covered by these references, which heretofore have been of little concern to the Special Agent, are now essential elements of knowledge to the DSSA if he is to successfully accomplish his mission under the DSCCP concept. This is particularly necessary in the areas of SIGINT, PHOTINT, OPSEC and Computer Security. Listed below are sample EEI for each category. These EEI are basic and are only a partial listing provided as an aid in developing a list peculiar to the supported command. Some of the items may not be germane to every DSSA but are included as nuclei for possible development of new or related ideas. The final EEI list prepared by the DSSA should include the source or sources that can provide the required information.

2. (U) HUMINT: The following elements are those normally attributed to collection or exploitation by human intelligence sources. This information will usually be obtained by various HUMINT sources, personal observation by the DSSA and liaison contacts:

a. HOIS subscriptions or regular acquisition of local and post newspapers and periodicals. Sources: LEO contacts and USAINSCOM.

b. Deliberate compromise of classified information or unauthorized release of military information to representatives of foreign governments (ARs 380-5, 380-10, 381-12 and 381-12-1)

c. Public information releases and local newspaper articles revealing unclassified but useful (to HOIS) information regarding the command.

d. Theft, suspected theft, or unauthorized reproduction of classified documents and or material.

e. Reported or suspected blackmail or coercion of individuals employed within the supported command.

REGRADED UNCLASSIFIED
ON 5 SEP 1997
BY USAINSCOM FOIPA
Auth Para 4-102 DOD 5200.1R

Page 2062 of 3957

CONFIDENTIAL

f. Actual or attempted physical breaches of restricted area perimeter security, external or internal.

g. Early detection of persons whose activities and/or character weaknesses may render them vulnerable to hostile intelligence exploitation. Suitability factors may include:

(1) Excessive indebtedness or recurring financial difficulties.

(2) Unexplained affluence.

(3) Conduct rendering the individual vulnerable to pressure, such as homosexual, criminal or immoral acts.

(4) Excessive use of alcoholic beverages or improper use of drugs or narcotics.

(5) Mental or emotional instability or history thereof.

(6) Those who attempt to commit suicide.

(7) Drastic changes in behavior to indicate possible unexplained pressures being brought to bear.

h. Personnel who regularly and voluntarily work during non-duty hours when unobserved access to classified data is possible.

i. Sudden unexplained or inadequately explained absences from work.

j. Membership in, or association with members of organizations constituting a local threat against the US Army as defined in AR 380-13.

k. Unsolicited correspondence from individuals, organizations or addressees known to be a threat to the US Army.

l. Allegations or denunciations of espionage or sabotage on the part of sensitive installation personnel.

3. (U) PHOTINT: This pertains to intelligence obtained by means of photography, mainly through HOIS satellites or HOIS commercial aircraft. Also included must be threats posed by hand-held cameras operated from low-flying private aircraft and ground-level photography conducted from areas outside the perimeter of the installation. Photography from sea-borne platforms should be considered at installations located near international waters. Sources of information for this type of data are documentary sources such as SATRAN messages, schedules of tests, operations and troop movements, as well as results of liaison contacts and personal observations. Some sample EEI are as follows:

REGARDED UNCLASSIFIED
ON SEP 5 1997
BY CDR USAINSCOM FOI/PO
Auth Para 1-603 DoD 5200.1R

CONFIDENTIAL

Page 2063 of 3957

a. Following activities during periods of scheduled overflights by HOIS satellites and commercial aircraft:

(1) Large and significant training exercises.

(2) Testing of equipment and/or techniques in the open.

(3) Uncamouflaged new or sensitive equipment.

(4) Other significant movements and activities.

(5) Concentration of transportation equipment, i.e., transports, etc.

b. Build up of major item stockpiles in the open.

c. Gradual build up of facilities at a test site.

d. Repeated violation of air restricted zones by commercial/private planes.

e. Appearance of private aircraft during classified, or significant tests/demonstrations.

f. Placing, operating or testing of new, significant or classified equipment in areas exposed to the public.

g. Sudden appearance of camera-carrying "tourists" in the vicinity, coinciding with the scheduling of new, unusual and/or classified activity.

h. Unobstructed windows and apertures in areas where classified matters are handled, permitting observation and photography from uncontrolled areas.

i. Foreign vessels, particularly from East Bloc Countries, appearing off-coast of installations near international waters.

4. (U) SIGINT: Signal intelligence is derived from the intercept and analysis of communications, COMINT, and from communications electromagnetic radiations, ELINT. HOIS SIGINT collection against US facilities is accomplished from air-borne, sea-borne, and land-based platforms. HOIS capabilities in this field are described in the USAINTA Threat Manual and additional information as to specific threat to the supported installation may be found in reports of SVAs and SAVEs and/or requested from USAINTA. The field of SIGINT is a very complex and specialized one. Adequate protection of a command/installation from HOIS SIGINT collection requires

REGRADED UNCLASSIFIED
ON SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

568

the application of Signal Security (SIGSEC) which includes Communications Security (COMSEC), and Electronic Security (ELSEC). COMSEC measures are applied to telecommunications systems and has four components; crypto security, physical security, transmission security and emission security. ELSEC pertains to protective measures applied to electromagnetic radiations of non-communications equipment and systems to prevent the interception, analysis or exploitation of those radiations by foreign intelligence. The DSSA must become sufficiently familiar with the above subjects in order to recognize vulnerabilities, and know when to recommend a request for technical assistance. References 1h, 1, p, q, r, s, and 5d and e in APPENDIX A will provide additional information. Furthermore, the DSSA must work closely with the staff element having responsiblity for SIGSEC of the supported installation. The EEI selected will be the type that can be fulfilled by human sources, preferably located in communication/electronics work areas. Some EEI common to SIGINT are located in para 1c, Appendix to AR 530-1. Other sample EEI follow:

a. Conducting tests on new or sensitive radars and other non-communication emmitters within range of land based, air-borne or sea-based HOIS ELINT platforms.

b. Installing and operating electrically operated, information-processing equipment which handles classified information without the application of compromising emanations control measures.

c. Poor telephone security to include:

(1) Discussion of classified matters over Autovon and commercial telephone systems.

(2) Discussions of upcoming events which can provide tipoffs to classified activities.

(3) Use of double talk in reference to classified messages.

(4) Reading/quoting verbatim portions of classified matters.

5. (U) OTHER EEI: The following items are of interest to the US Army intelligence community and will be forwarded to this headquarters by Agent Report format for appropriate action. A statement in Agents Notes will indicate if and how the information has been reported through other appropriate channels. As the information will be passed to USAINSCOM for possible exploitation bt the Special Operations Detachment or the Director of Operations as appropriate, the Agent Reports will be classified CONFIDENTIAL-NO FOREIGN DISSEM. Normally this information is not passed to the local commander other than to insure that other proper reporting

REGRADED UNCLASSIFIED

BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

procedures are being followed by the command.

a. Identification and extent of foreign contacts of military and DOD civilian personnel, with emphasis on Soviet bloc countries.

b. Intended foreign travel of military or DOD civilian personnel to Soviet bloc countries or attendance at social or official functions at which Soviet bloc countries are present.

c. Foreign business or professional connections and the extent thereof of military and DOD civilian personnel and their families, with emphasis on Soviet bloc countries.

d. Solicitation by foreign national or organizations of personal or official information through official or unofficial channels.

e. Invitations by non-US Government organizations or individuals to members of the supported command to participate in conferences or symposia or to submit papers for publications in professional journals on activities related to their government employment.

APPENDIX C TO 902d MI GROUP PAMPHLET 381-3

DSCCP QUARTERLY PROGRESS REPORT

1. (U) IDENTIFY: (Name of 902d MI Group Field Element providing support).

2. (U) SUPPORTED COMMAND: (The activity(ies) receiving the support and the major command(s) involved.)

3. ( ) TARGET ANALYSIS: (In the initial report summarize the results of target analyses conducted for all activities, installations, or separate elements designated and included in the program, by order of priority of support. Subordinate elements large enough to be designated sub-targets will be listed in subparagraphs. In subsequent reports, indicate only changes as they occur.)

4. ( ) QUARTERLY BRIEFING OF SUPPORTED COMMAND

a. Circumstances: In brief narrative form, cite date(s), identities of all persons present, and subjects discussed and results of the briefing(s).

b. Recapitulation of Operational Progress During the Period: In as many subparagraphs as may be required, cite significant developments as pertain to development of the program, improvements in target coverage, and any operational readjustments made during the period. In citing specific items of interest, identify each by making reference to the appropriate reports made during the reporting period which contained details of the topic discussed with the commanders, if applicable.

c. Significant Counterintelligence Information Developed: In as many subparagraphs as may be required, cite identities of personalities, incidents, or groups discussed with reference to the report previously submitted.

5. ( ) INFORMATION SUBMITTED:

a. To the local commander and actions implemented or taken as a result:

Subject	Type Information Developed	Action Taken	Date of Action

b. To the intelligence community:

Subject	Type Information Developed	To whom reported

6. ( ) COMMENTS, REMARKS AND RECOMMENDATIONS:

In this paragraph, indicate any general remarks or indications of special

571

Page 2067 of 3957

interest shown by the supported command that are not covered in above paragraphs. These remarks should reflect the commander's assessment of the viability of the program, whether it is meeting the objectives and achievements as he sees them, and any problems and/or recommendations. Also indicated the extent with which the commander or his representative has cooperated with the FO/RO and/or this group and any pertinent remarks which could serve to improve the DSCCP support to the command. Where problem areas have been encountered, findings and recommended solutions will be provided. Lessons learned should be included to assist in the planning and implementation of other operations. A statement will be entered as to whether any information concerning non-affiliated DOD civilians or organizations was reported (AR 380-13). If affirmative, reference specific report or attach copy. Utilize subparagraphs to explain or amplify information or data reported.

NOTE: Classify each paragraph according to its content. Because of the distribution of this report, care must be taken to insure that the contents of the report do not reveal SI/SAO access material. An example of this would be to include the Statement "three items of PHOTINT information, reference messages _____, _____, and _____, were received and passed to the supported command. Appropriate actions were taken", without revealing the SI/SAO information contained within the reference messages.

5. (U) The 525th MI Group reviewed each of its three active ICIPS, CANVAS TAX (Sierra Army Depot), LENS HOLDER (White Sands Missile Range), and LENTIL MONKEY (Defense Language Institute) for consideration of possible replacement with a program similar to the DSCCP of the 902d MI Group. As a result of this review the CDR, 525th MI Group believes that a program similar to the DSCCP can be established which would provide requisite support to Sierra Army Depot, CA and White Sands Missile Range, NM, which will permit termination of ICIPS at

those locations. Because of the transitory nature of the military community and the makeup of the civilian community at DLI, the present techniques used in ICIP LENTIL MONKEY are believed best suited to provide the necessary support to the commander. LENTIL MONKEY has been very productive under existing operational concepts and should continue to provide significant developments in the future.

6. (U) The 525th MI Group recommends that, based on the above, CANVAS TAX and LENS HOLDER be terminated on 31 Aug 76 at which time a substitute support program will become effective. The 525th MI Group further recommends that, based on the above and the yearly analysis submitted with reference 1a, LENTIL MONKEY be revalidated and permitted to remain in effect.

7. (U) USAINTA concurs in the recommendations of the 525th MI Group.

REMARKS

1. The Commander, 902d MI Group made the decision that the Project Control Officer (the individual who handles the sources) for Canter Ride be located at HQ 902d MI Group at Fort Meade, Maryland, and not at Redstone Arsenal.

2. The Operations Plan for Canter Ride specifically specified funding for the Project Control Officer to be located at Fort Meade, Maryland. The OPLAN was approved at this level.

3. The Commander's decision undoubtedly based on sensitivity of certain activities of employees at MICOM.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 2 June 1976

ACTION REQUIRED: To obtain approval of the Quarterly ICIP Report.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) Background: On 8 Feb 72, the Under Secretary of the Army requested that the VCSA provide a quarterly report on all ICIP operations. On 1 Apr 76, the Under Secretary of the Army requested, "On next quarter's review, please provide an analysis (of each ICIP for the past year) to include statistics." (TAB B).

2. (U) Discussion:

-- During the 3d Quarter two ICIP's were terminated, CANTER RIDE at Redstone Arsenal and CANARY EFFORT at Fort Ritchie. USAINTA will continue to provide overt CI support to these installations.

-- At close of 3d Quarter, seven ICIP's were active. Summaries of each ICIP, plus the two which were terminated, attached as Inclosure 1, TAB A.

-- In compliance with the Under Secretary's request, an analysis of each ICIP for the past year is attached as Inclosure 2, TAB A. Attached as Inclosure 3, TAB A, are the statistics for the ICIP's referred to in Inclosure 2.

-- USAINTA recommended in May 76 that three more ICIP's be terminated: CANINE PLATE (U) at Seneca Army Depot, CENSUS TIME (U) at Pentagon Telecommunications Center, and CENTAVO KID (U) at Harry Diamond Laboratories. Formal ACSI termination is being handled by separate action. (Decision: 6 Jun 76) Remaining four to be presented to ACSI by 26 Jun 76.

-- Information Memorandum at TAB A transmits summaries of ICIP operations through the VCSA to the Under Secretary of the Army for third quarter FY 76.

3. (U) Recommendation: That the Information Memorandum at TAB A be approved and signed by the ACSI.

DEPARTMENT OF THE ARMY
OFFICE OF THE ASSISTANT CHIEF OF STAFF FOR INTELLIGENCE
WASHINGTON, D.C. 20310

REPLY TO ATTENTION OF: DAMI-DOH

16 JUN 1976

MEMORANDUM THRU: VICE CHIEF OF STAFF, US ARMY

FOR: UNDER SECRETARY OF THE ARMY

SUBJECT: Internal Counterintelligence Program (ICIP) (U) -- INFORMATION MEMORANDUM

1. (U) During the 3d Quarter, January-February-March 1976, two of the on-going ICIP operations, CANTER RIDE at Redstone Arsenal, Alabama, and CANARY EFFORT at Fort Ritchie, Maryland, were terminated effective 31 March 1976. Although these operations were terminated, the United States Intelligence Agency will continue to provide overt counter-intelligence support to the sensitive elements at Redstone Arsenal and Fort Ritchie.

2. (U) The total number of active ICIP operations at the close of the 3d Quarter was seven. Summaries for each of these operations, plus the two which were terminated, are attached as Inclosure 1.

3. (U) The Under Secretary of the Army commented on our 1 April 1976, 2d Quarter ICIP Information Memorandum that an analysis of each ICIP operation for the past year, to include statistics, be provided with this quarterly review. In compliance with this requirement, an analysis of each ICIP operation has been made for the past year and is attached as Inclosure 2. Also, attached as Inclosure 3, are the statistics for the ICIP operations referred to in Inclosure 2. These statistics provide a recapitulation of pertinent production, costs and manhours for these operations.

4. (U) After reviewing the 2d Quarter ICIP Report, I have directed that three more operations be terminated: CANINE PLATE (U) at Seneca Army Depot, Romulus, New York; CENSUS TIME (U) at Pentagon Telecommunications

Center; and CENTAVO KID (U) at the Harry Diamond Laboratories, Adelphi, Maryland. Overt counterintelligence support will continue to be provided these installations by elements of the appropriate Military Intelligence units. Before the end of June 76, the four remaining cases will be reviewed again for retention.

5. (U) Our goal is to assist the Army commander in improving the operations security (OPSEC) posture of his installation through the use of the complete spectrum of counterintelligence services. I am expanding the use of overt counterintelligence services and want to use the ICIP very selectively to ferret out espionage activities of hostile intelligence services.

1. ~~(C)~~ CANARY EFFORT: (OACSI Revalidation - 4 Feb 75)

a. Location: Fort Ritchie, MD

b. Confidential Source Utilization: Three

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) On 15 January 1976, the Project Liaison Officer (PLO), as a result of a liaison visit with the Baltimore Division of the Federal Bureau of Investigation obtained data on the presence of Sino-Soviet Bloc personnel travelling within the environs of the target areas and information on those Sino-Soviet Bloc personnel residing temporarily in the environs of the target area.

(2) On 28 January 1976 a member of the 572d Military Police Co, Ft Ritchie, was approached by an unidentified individual at Hagerstown Junior College, Hagerstown, MD, who claimed to be employed at Site R. The individual described Site R in general terms, but made no attempt to elicit information from the soldier. Investigative efforts failed to identify the individual. All available information was provided the Hagerstown Resident Office of the FBI. A USAINTA investigation of the incident is continuing.

(3) On 28 January 1976, an unidentified individual approached a soldier assigned to the US Army Communications Command East Coast Telecommunications Center (USACCECTC) and requested a tour of that facility. The individual appeared interested in the antenna configuration of Satellite Communications/Direct Communication Links (SATCOM/DSL). The request for the tour was denied. All available information was provided the Hagerstown Resident Office of the FBI. USAINTA investigation of the incident is continuing.

(4) During the reporting period information was developed on a Non-Appropriated Fund (NAF) employee who is a bartender employed at the Ft Ritchie NCO Club. The bartender allegedly told the patrons that she was in the employ of both "Military Intelligence" and the "CIA." An investigation is being conducted by USAINTA.

(5) On 18 March 1976, a US Army NCO assigned sensitive duties in the Alternate National Military Command Center (ANMCC) volunteered information concerning his entering into correspondence with an agency of the East German Government. The NCO, who has been researching his family history for the last six years, was attempting to obtain a record of the military service of his great-great grandfather in the period circa 1810. In the course of an inquiry to the Federal Republic of

Germany (FRG) Ambassador in Washington and the FRG Government, he was advised to contact the German Historical Central Archives in East Germany. The NCO volunteered the information to make it a matter of official record. He was given a SAEDA briefing under the provisions of AR 381-12 with special emphasis on reporting procedures. The NCO will inform Army Intelligence should he be contacted by any East Germany Agency and will provide copies of any correspondence he receives. At present the exploitation opportunities are unknown, pending any East German Intelligence Service overture. The Chief, ANMCC was briefed on the incident.

e. Operational Status:

(1) In February 1976, the 902d MI Group selected Operation CANARY EFFORT for termination. Supported commanders were briefed on the termination in conjunction with the scheduled quarterly briefings. All confidential sources used in this ICIP have been terminated. The effective termination date for CANARY EFFORT is 31 March 1976.

(2) During the quarter, the PLO presented 21 SAEDA/Threat/Security Awareness briefings to personnel assigned to supported activities at Fort Detrick and Fort Ritchie.

(3) The PLO presented the Quarterly Progress Briefing to LTC Dale S. Cockle, CDR, USACC ECTC, on 30 March 1976.

(4) The PLO, on 1 April 1976, presented the Quarterly Progress Briefing to COL John S. Eberle, CDR, US Army Communications Command (USACC) Site R.

(5) On 5 April 1976, the PLO gave the Quarterly Progress Briefing to the supported command, HQ, 7th Signal Command and Fort Ritchie, with the following officials present: COL Harold G. deMoya, CDR, Ft Ritchie; COL John J. Plosay, Jr., Deputy CDR, Ft Ritchie and Mr. Joseph J. Carroll, Acting Assistant Chief of Staff, Intelligence and Security, 7th Signal Command and Ft Ritchie.

d. Useful Information Obtained: None

e. Operational Status:

On 18 February 1976, COL Hassel Parker, CDR, 902d MI Group, with the Project Liaison Officer (PLO) in attendance, provided a special briefing on this operation to MG Turnmeyer, CDR, USAMICOM. COL Lange, USAMICOM Chief of Staff, was also present during the briefing. As a result of the briefing, it was agreed by the participants that since the operation had accomplished its objective it should be terminated and the insert source should be extracted to reduce the risk of compromise. The CDR, USAMICOM expressed his deep appreciation for the information provided by the operation and concurred with the suggested termination. The source used in this operation has been debriefed and reassigned. The effective termination date for CANTER RIDE is 31 March 1976.

4. (U) CANVAS TAX: (OACSI Revalidation - 4 Feb 75)

a. Location: Sierra Army Depot (SIAD), Herlong, CA

b. Confidential Source Utilization: Two

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained: None

e. Operational Status:

(1) The two confidential sources are providing coverage of the Priority I activities of SIAD which are Exclusion Areas I and II. Two conventional sources and one casual source cover the Priority II activities which are the staff and security organizations of the Depot. One individual assigned to the Special Weapons Section, Exclusion Area II is under assessment as a potential source.

(2) The Quarterly Progress Report for the 2d Quarter, FY 76, which had been postponed at the request of the CDR, SIAD, was presented by the Project Liaison Officer (PLO) on 13 Feb 76 to the following SIAD officials: COL Robert Hawlk, CDR, SIAD; LTC Robert Render, Deputy CDR; MAJ Robert Folster, Security Officer; CPT Wayne Heringer, Intelligence Officer and Mr. Anthony Tornabene, Assistant Intelligence Officer. The following personnel from the 525th MI Group also attended the briefing: COL Donald Bradbury, CDR; LTC Arthur McQueen, Operations Officer, and MAJ Trevor Bissey, CDR, San Francisco Field Office.

(3) ICIP Sources have been tasked to report any significant counter-intelligence EEI or indicators of hostile intelligence activity impacting on Operation Rocking Force (U), a special weapons project presently in progress at SIAD.

(4) The Quarterly Progress Briefing for the 3d Quarter, FY 76, will be presented by the PLO on or about 30 April 1976 to the SIAD officials listed in paragraph 4e(2), above.

5. (C) CENSUS TIME: (OACSI Revalidation - 4 Feb 75)

a. Location: Pentagon Telecommunications Center (PTC), US Army Communications Command (USACC), The Pentagon, Washington, DC

b. Confidential Source Utilization: None

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) The Limited Investigation reported in the last quarter on the PTC NCO who had attempted suicide and allegedly had involved himself in financial troubles, drugs, and homosexuality was completed and referred to PTC for adjudication. The decision was made not to revoke the NCO's security clearance since he left the service on 9 April 1976 and will not be allowed to re-enlist.

(2) During the course of an investigation of an enlisted WAC member of PTC who had a SECRET security clearance and who was Absent-Without-Leave, it was discovered that Criminal Investigation Command (CID), Ft Meyer was also investigating her for theft and trafficking in drugs. The Project Liaison Officer (PLO) and CID agents coordinated their mutual investigations. Drug charges are pending the results of laboratory tests of substances purchased from the WAC by CID informants. PTC has suspended the WAC's access to classified material pending completion of the investigation.

(3) The PLO arranged with appropriate 902d MI Group elements to present formal SAEDA briefings to all PTC personnel, including the PTC elements in the Hoffman and Forrestal Buildings. This project is scheduled for completion in the next quarter.

e. Operational Status:

(1) The Hoffman Telecommunications Center has been brought under coverage of this ICIP, as requested by COL Donald E. Clark, PTC Commander, in the previous quarter.

(2) On 24 March 1976, the PLO presented the Quarterly Progress Briefing to COL Clark, CDR, PTC. CW2 Leonard Gross, Alternate PLO, was also present at the briefing.

a. Location: Harry Diamond Laboratories (HDL), Adelphi, MD

b. Confidential Source Utilization: None

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) As a follow-up implementation of "Lessons Learned" in the courtesy penetration test conducted at HDL's Adelphi Facility in the previous quarter, the Project Liaison Officer (PLO) and the HDL Security Officer prepared and delivered a series of lectures and classes to the HDL Guard Force on the penetration test. The Guard Force is operating under new instructions designed to thwart attempted penetrations. A new HDL Badge and Pass System, utilizing a magnetic coded badge and a computer control device, will be started in mid-1976.

(2) The PLO delivered lectures on the penetration test conducted at HDL to the faculty and students of the Counterintelligence Dept, US Army Intelligence Corps School, Fort Huachuca, AZ, on 20 and 21 January 1976.

(3) The PLO, assisted by other 902d MI Group personnel conducted several technical inspections at HDL. The PLO provided advice and assistance at several design meetings concerning new buildings at HDL.

(4) Other security advice was provided by the PLO to the Woodbridge Research Facility (WRF), Woodbridge, VA, and the Gaithersburg Test Site (GTS), Gaithersburg, MD. The PLO assisted in devising Operational Security techniques at these sites, the only HDL facilities at which outdoor testing takes place.

e. Operational Status:

On 16 March 1976, the PLO presented the Quarterly Briefing to MAJ Kenneth F. Keller, Executive Officer, HDL, and Mr. James F. Yeick, Security Officer, HDL.

a. Location: White Sands Missile Range (WSMR), NM

b. Confidential Source Utilization: Two

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) A confidential source reported that unknown persons had attempted on 11 January 1976 to penetrate the TRADOC Systems Analysis Activity (TRASANA). On 12 January 1976, it was reported that an unidentified individual claiming to be a colonel had been permitted to enter the TRASANA Compound. These incidents were reported immediately to the Security Officer, TRASANA. An investigation by TRASANA security personnel disclosed that there was no substance to the 11 January report and the person in the second incident of 12 January was identified and found to be a legitimate entrant into the facility. The incidents did serve to illustrate the security awareness of the source and the personnel involved.

(2) A source surfaced information on 4 February 1976 that two enlisted soldiers at TRASANA were engaged in drug trafficking, but in separate individual operations. Local on-post investigation resulted in apprehension of one of the individuals. All available information on the second individual was reported to the Sixth Region, US Army Criminal Investigation (CID) Command for appropriate action.

(3) A confidential source reported in March 1976 in three reports that such devices as radios, tape recorders, and "pocket" digital calculators were being brought into a TRASANA Exclusion Area by personnel having access to the area. These devices reportedly could affect the computers used in the area, some of which have classified data in storage. The Activity Security Officer has been briefed on these alleged practices and ICIP project personnel have been tasked to provide follow-up reports on action taken by the supported command. The information contained in the reports has been provided to the Counterintelligence Services and SAVE Team elements at USAINTA as a matter of interest.

e. Operational Status:

(1) The two confidential sources provide coverage of TRASANA and the US Army Electronics Command, Office of Missile Electronics Warfare (OMEW), WSMR. One individual assigned to the US Army Missile Test and Evaluation Directorate is under assessment as a potential source.

9. (U) LENTIL MONKEY: (OACSI Revalidation - 4 Feb 75)

a. Location: Defense Language Institute (DLI), Presidio of Monterey, CA

b. Confidential Source Utilization: Eight

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) The female instructor in the Czechoslovakian Language Department reported in the last quarter as preparing to resign her position and return to Czechoslovakia now is reportedly having serious health problems. It is unknown if her health will cause a change in her original plans, and the FBI to date has not indicated whether or not that agency has a continued interest in the instructor or her spouse.

(2) A Polish Language Department instructor plans to visit his mother and a brother in Warsaw in mid-1976, a confidential source has learned. The instructor has submitted no formal request to DLI for the trip yet. The instructor's activities are monitored as a matter of intelligence interest because of his and his brother's travels. His brother, a medical doctor has visited in the US and Canada frequently over the last 20 years and was once detained by US Customs at the Canadian border for attempting to smuggle Communist propaganda into the US. During a 1974 visit to the US, the instructor's brother visited DLI, attended Polish Language Department functions, talked with and photographed the students. USAINTA is monitoring the instructor's activities.

(3) A Czech language instructor is continuing his efforts to obtain the release of his children from Czechoslovakia. A confidential source surfaced the most recent information that the Czech Government has informed the instructor he could get his children out of the country if he pays the Czech Government $66,000. ($6,000 for the cost of his time in a Czech prison and $60,000 as an educational tax on his and his wife's education.) Source did not have further information on this particular aspect, but reported that in mid-February 1976 the instructor gave many of the DLI Czech students a list of newly published books in the Czech language. The books are distributed by a Canadian firm, "Sixty Eight Publishers," Box 695 Station A, Toronto, Ontario M5W 1G2 Canada. The instructor told his classes that the Czech military had officially changed their method of counting for example, using "21" instead of "1 and 20." Insignificant in itself, this last item indicates that the instructor is maintaining ties with Czechoslovakian officials. USAINTA is monitoring the instructor's activities.

(4) Information developed from official sources during the period disclosed that an instructor of the Russian Language Department (RLD) apparently is suffering from mental problems. The instructor has written letters to a California senator, a nationally syndicated columnist, and the FBI, alleging that he is under surveillance of Soviet and US intelligence constantly and that his life is in danger. The Commander, USAINTA, provided a summary report on the instructor to the ACSI. The instructor later sent a telegram to the President of the United States. Both the FBI and the Secret Service have made inquiries into the matter. On 23 March 1976, the Commandant, DLI, took administrative action directing the instructor to undergo psychiatric evaluation. The instructor refused initially and was administratively suspended from teaching. At the end of the quarter, the instructor agreed to the examination and final disposition of the matter is pending.

e. Operational Status:

(1) As a result of the RLD incident described in d(4), above, the DLI Commandant has directed that the Civilian Personnel Office and Security Office screen records of faculty members for indications of mental problems. Once identified, action will be taken to obtain treatment for the individuals concerned.

(2) Eight confidential sources were utilized during the quarter; three sources were terminated due to graduation. Four new confidential sources were recruited, including one Technical Language Assistant (TLA). Fifteen individuals are under assessment as possible sources, including one instructor and one TLA. In addition to the confidential sources, there are 16 conventional sources providing coverage of seven language departments and the DLI staff.

(3) On 29 March 1976, the PLO presented the Quarterly Briefing to COL Samuel L. Stapleton, Commandant, DLI. Also present at the briefing were COL Donald K. Bradbury, CDR, 525th MI Group; MAJ Trevor Bissey, CDR, San Francisco Field Office, 525th MI Group; CPT Brendon A. Xiques, SAIC, Ft Ord Resident Office, 525th MI Group; and Mr. James Green, Asst Security Officer, DLI.

ICIP REPORT

1 April 1975 to 31 March 1976

(C) CANARY EFFORT: (OACSI Revalidation - 4 Feb 75)

a. Location: Fort Ritchie, MD

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 April 75 - 31 March 76:

(1) Confidential and conventional sources employed in the operation surfaced information on adverse suitability pertaining to 86 employees at Fort Ritchie, all of whom had security clearances and access to one of the sensitive activities supported. The suitability information included the entire spectrum in this category - alcohol and drug abuse, moral improprieties and mental instability. In these instances investigative action was taken to refute or substantiate the allegations or the individuals were removed from access to classified information. About 50% of the cases reported involved some degree of drug abuse; these were referred to the Criminal Investigation Command (CID) for action.

(2) Two separate reports were received concerning suspected Soviet Intelligence presence and interest in the activities of the supported installation. Details of these reports were provided the FBI in May 1975. In one instance an individual resembling a known KGB agent paid an unusual amount of attention to shipment of sensitive cargo to Fort Ritchie; in the second instance an individual assigned to Fort Ritchie reported that a second person whom he had met claimed to be in contact with the Soviets in Hagerstown, MD. b1 Per FBI

b1 Per FBI

(3) An ICIP source reported a possible compromise occurred when the Telecommunications Directorate, Site R, was tasked to prepare a special test tape containing test messages which could be used for coding and to devise compatibility between two computer systems. The test tape, though it consisted only of innocuous, unclassified messages, also contained fragments of sensitive, highly classified messages which had been picked up from residual magnetism on the reels of the equipment when the messages were recorded. This latter condition was not discovered until processing to make the systems compatible took place, after the tape had lain unsecured, in open storage, for about six weeks. A command investigation of the incident followed and a determination was made that apparently a compromise had not occurred, but as a result of the incident, changed security procedures were put into effect for the handling and storage of computer tapes, reels, and discs.

(4) Two possible SAEDA approaches to soldiers stationed at Fort Ritchie in January 1976 are currently under investigation by USAINTA and the FBI. Reports of a Fort Ritchie NCO Club bartender professing to be employed by the "CIA" and "military intelligence" are currently being investigated by USAINTA.

(5) In March 1976, an Army NCO assigned sensitive duties at Fort Ritchie volunteered that he had contacted by letter an agency of the East German Government. The NCO desired to make the matter of the contact part of official records in the event he should be later contacted by any agency or person from East Germany. Though the NCO's action was part of his research of his family history and ostensibly is an overt, sincere effort on his part, the East German Intelligence Services (EGIS) often take such opportunities to make intelligence approaches, especially if the US soldier-target has special clearances and access to sensitive information. The NCO is under instructions to report any responses to his letter.

d. Operational Status:

(1) CANARY EFFORT was first approved for implementation by OACSI, DA, on 11 June 1965.

(2) Operation CANARY EFFORT to be terminated effective 31 March 76. Supported commanders were briefed on the termination action during the quarter ending 31 Mar 76. All confidential sources used in the ICIP have been terminated.

(3) b1

(4) The Operation yielded 69 information reports and 116 other reports which were chiefly verbal reports provided to the supported commanders.

e. Comments: The ICIP at Fort Ritchie clearly has been a productive operation at a critically sensitive installation. Information obtained as a result of the ICIP and acted upon by the commanders concerned has served to strengthen the security of the installation. The 902d MI Gruop will continue to provide counterintelligence support to the installation under an overt comprehensive counterintelligence support program.

ICIP REPORT

1 April 1975 to 31 March 1976

(U) CANINE PLATE: (OACSI Revalidation - 4 Feb 75)

a. Location: Seneca Army Depot (SAD), Romulus, NY

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 to 31 Mar 76: There was no significant information obtained during the period and there were no indications of any overt threat to the installation.

d. Operational Status: CANINE PLATE was first approved by OACSI, DA, for implementation on 18 Sep 73. Five conventional sources are contacted on a recurring basis by the Project Liaison Officer (PLO). One official sources is in a position to assist in spotting potemtial new sources. During the last year, the PLO expended a total of 400 manhours in the program. No funds were expended. No information of counterintelligence significance was surfaced in this period. Only conventional sources have been utilized in this operation.

e. Comments: The installation's mission remains the same, a supply depot for missile and artillery weapons systems with a nuclear capability. The Depot is considered a critically sensitive installation and a potential target for HOIS. However, there was no information reported to indicate the presence of any overt threat to the installation.

ICIP REPORT

1 April 1975 to 31 March 1976

(b)(1) CANTER RIDE: (OACSI Approval - 4 Mar 75)

a. Location: US Army Missile Command (USAMICOM), Redstone Arsenal, AL

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 to 31 Mar 76:

(1) An inserted covert confidential source was employed in this operation to attempt to learn the existing situation in the Optical Guidance Technology Office (OGTO), Advanced Sensors Directorate, USAMICOM, when reports received in 1974 alleged that lax security practices had led to loss and possible compromise of classified information and that several employees were engaging in sex orgies in offices during the day. In Sep 74, the CG, USAMICOM, conducted a Command Investigation as a result of these reports under the provisions of Army Regulation 15-6. As a result of that investigation, the CG, USAMICOM, requested that an ICIP operation be conducted in OGTO. The Source, once in place, had to rely chiefly upon elicitation to obtain his information because of his covert status, but during the period, did succeed in surfacing adverse suitability information on a civilian physicist with access to sensitive, SECRET information which indicated that he was probably the catalyst for the sexually-oriented activities of the OGTO employees. The employee, apparently obsessed with sex, had numerous extra-marital relations during the last five years. The Commander, USAMICOM, was provided a summary of information on the employee for appropriate command action. The employee transferred to another office in USAMICOM, which apparently broke up the clique and Source could uncover no new evidence of continuing activities among the remaining employees.

(2) In addition to the above, the Source provided substantial information on security weaknesses in the supported command to include poor housekeeping practices, lack of control of reproduction facilities, lack of proper control of area access, lax security attitudes, and possible compromise of security badges through continued losses by individuals. Source provided such security weakness and hazard details to the Project Case Officer who relayed it to overt MI project personnel at Redstone. The Project Liaison Officer provided these reports to the USAMICOM Commanding General and appropriate security personnel who have taken actions to remedy the security weaknesses.

d. (U) Operational Status:

(1) (U) CANTER RIDE was first approved by OACSI, DA, for implementation on 4 Mar 75.

(2) (S) b1

(3) (U) The operation yielded one Summary of Information and several oral reports on security weaknesses.

(4) (U) As the result of an 18 Feb 76 briefing presented to the USAMICOM Commanding General, the MI Group conducting the Operation, the project personnel, and the supported commander concurred in findings that the Operation had accomplished its original objective and should therefore be terminated. The CG, USAMICOM, declared that the operation was a success. The insert Source used in the operation has been withdrawn and reassigned. The CDR, USAINTA, and the ACSI verbally approved the termination of CANTER RIDE on 20 and 23 Feb 76, respectively with an effective date of 31 Mar 76.

e. (U) Comments: Counterintelligence support continues to be provided by elements of the MI Group stationed at USAMICOM.

~~CONFIDENTIAL~~

ICIP REPORT

1 April 1975 to 31 March 1976

(c) CANVAS TAX: (OACSI Revalidation - 4 Feb 75)

a. Location: Sierra Army Depot (SIAD), US Army Materiel Development and Readiness Command (DARCOM) Herlong, CA

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During the Period 1 April 1975 to 31 March 1976:

(1) Reports alleged the use of illegal drugs by military personnel at SIAD. However, no details were available.

(2) Information was reported that an exclusion area personal identification badge was missing and that an inquiry failed to find or determine how the badge was lost. As a result of the missing badge incident, new identification badges were issued.

(3) An enlisted man assigned to SIAD was charged with malicious damage of a generator at SIAD and his security clearance was revoked by the Commander, SIAD.

d. Operational Status:

(1) During the reporting period 616 manhours were expended and 14 Agent Reports were submitted.

(2) TDY funds totalling $29.35 were expended; b1

b1

(3) At the end of the reporting period two confidential sources were being used.

e. Comments:

(1) This ICIP was administratively implemented in April 1974.

598

~~CONFIDENTIAL~~

Classified by C1C, USAINTA
EXEMPT FROM GENERAL DECLASSIFICATION
SCHEDULE OF EXECUTIVE ORDER 11652
EXEMPTION CATEGORY 2
DECLASSIFY ON 31 Dec 2006

~~CONFIDENTIAL~~

(2) The mission of the Sierra Army Depot (SIAD) is the operation of the Depot for the receipt, storage, issue, maintenance, and disposal of missile and artillery weapons with a nuclear capability. Included in the items handled by SIAD are ammunition, special weapons materials, propellants, explosive components of guided missiles, supplies, petroleum and chemical supplies, fire control test and measuring equipment, and other special weapons with a nuclear capability. SIAD also maintains a capability for systems modification in support of the joint AEC/DOD test firing programs.

(3) Sierra Army Depot is the major storage area for special weapons in the western part of the US. The special weapons that formerly were located at the Safeguard anti-Ballistic Missile Site and Savanna Army Depot are now at SIAD, which elevates it to one of the most important special weapons repositories in the US. The Depot is located in a remote area and its contents make it not only of interest to hostile intelligence, but also a target of terrorist groups who are involved in nuclear theft and blackmail.

(4) The Department of Army Sensitive Installation and Unit List, January 1976, lists SIAD as "Critically Sensitive (CS)."

(5) A large portion of the work force is in exclusion areas so access to them on a daily basis is severely restricted for project personnel. Coverage of these areas by confidential sources thus becomes necessary for effective CI coverage. A 20 Sep 75 report of the Nuclear Defense Agency entitled "Adversary View and Support - Nuclear Weapon Site Security; Adversary Capabilities," in assessing terrorist groups tactics employed to acquire a nuclear device and options available, cites the method most likely to succeed as one in which a member of the regular work force has been approached, recruited and is on the terrorist groups payroll. The detection of this type of activity among members of a work force in an exclusion area is greatly enhanced by employing a confidential source program. At the close of the reporting period, two confidential sources were being utilized in the operation to cover the Priority I Exclusion Area. A third individual is under assessment as a potential confidential source.

(6) Hostile intelligence services have high priority collection objectives pertaining to such activities as those conducted at SIAD.

(7) The SIAD, as outlined briefly in subpara (5) and (6), above, appears highly vulnerable to a double threat, that posed by the increasingly active terrorist groups who operate on a global scale and the ever present threat of HOIS penetration. The ICIP is necessary as an additional means to provide "early warnings" to assist the Commander in formulating necessary plans and taking proper action to protect the sensitive and highly-destructive special weapons stored at this location.

ICIP REPORT

1 April 1975 to 31 March 1976

(U) CENSUS TIME: (OACSI Revalidation - 4 Feb 75)

a. Location: Pentagon Telecommunications Center (PTC), US Army Communications Command (USACC), The Pentagon, Washington, DC.

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During the Period 1 April 1975 to 31 March 1976:

(1) An ICIP source reported that a PTC civilian employee was transferred from the coding and decoding section because he had coded an obscene message that was to be sent to an overseas user. Additionally, the ICIP source provided information concerning possible security violations involving the employee. Because of the employee's questionable suitability characteristics and conduct he was assigned to a job in PTC requiring minimum contact with classified information. Supervisors will continue to monitor his conduct and activities.

(2) An Army NCO assigned to PTC attempted to commit suicide by slashing his wrists. As a result of the information gained concerning the suicide attempt a Limited Investigation was initiated. The NCO was assigned to the Logistics Branch, PTC, pending results of the investigation. The investigation revealed that the NCO has a large number of outstanding debts, has lied on loan applications, and had ordered a 1976 automobile which cost in excess of five thousand dollars. Interviews concerning the NCO revealed alleged drug usage and homosexuality. The Limited Investigation was completed and referred to PTC for adjudication. The decision was made not to revoke the NCO's security clearance since he left the service on 9 April 1976 and will not be allowed to re-enlist.

(3) Adverse suitability information was reported on two additional NCOs assigned to PTC. Based on medical reports and rebellious attitudes one NCO was released from the Army by board action. The second NCO after a night of heavy drinking began hitting his wife when she tried to arouse him after he had "passed out." The wife filed assault charges with the Military Police but withdrew them later. The PTC commander counselled the NCO on his drinking and marital problems and assigned him duties where he has no access to classified information.

(4) During the course of an investigative of an enlisted WAC member of PTC who was absent-without-leave (KAWOL Investigation), it was discovered that the CID was also investigating her for theft and trafficking in drugs. The MI representative and CID agents coordinated their mutual investigations. PTC has suspended the WAC's access to classified material pending completion of the investigation.

d. Operational Status:

(1) CENSUS TIME was first approved by OACSI, DA, for implementation on 5 Feb 74.

(2) During the period of 1 April 1975 to 31 March 1976, 726 manhours were expended, no TDY or ICF funds were used. The operation produced seven information reports. One confidential source was used during the period but was terminated during the latter part of the period.

e. Comments: The PTC operations include an extremely high volume of ultra sensitive classified traffic processed at the highest level, and includes the cryptographic support rendered to the JCS, the NMCC, departments and executive agencies of the government, allied embassies, and the United Nations Building in New York. The PTC remains a potential target for HOIS; however, there is no information reported to indicate the presence of any identified threat to the installation.

ICIP REPORT

1 April 1975 to 31 March 1976

(C) CENTAVO KID: (OACSI Revalidation - 4 Feb 75)

a. Location: Harry Diamond Laboratories, (HDL)), Adelphia, MD

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 - 31 Mar 76:

(1) Information was received that a First Secretary at the USSR Embassy, Washington, DC had visited HDL on two occasions. On one occasion he attended a meeting of the Institute of Electrical and Electronics Engineers, INC., a professional society for engineers which was held in the auditorium of HDL. The subject matter presented during the meeting was unclassified. At a second meeting of the society the Soviet Embassy official was denied entry. A report of the incidents were provided to the FBI and the Commander, HDL, made a determination that the society could no longer hold meetings at HDL in order to preclude any potential security threat.

(2) On two occasions an unidentified light aircraft flew over the test site, Woodbridge Research Facility (WRF), HDL, where a series of tests on foreign equipment under the Range Emory program was in progress. In both instances the aircraft circled over the Range Emory test cite for about 5-7 minutes. The overflights are being investigated in coordination with the FBI.

(3) An employee, HDL, made allegations of immoral activities by members of the HDL Security Office and a group at the Van Ness Avenue Facility, HDL. The employee claimed that she was being followed by members of the HDL Security Office. After investigating the employee's story, the Commander, HDL, believed that she was suffering from psychiatric problems and would have her visit a psychiatrist for a complete evaluation.

(4) Suitability information concerning an employee of the Woodbridge Research Facility (WRF) a branch of HDL located in Woodbridge, VA, involved a problem of alcohol abuse. After counseling, the employee participated in a rehabilitation program.

(5) From 7 October to 6 November 75, a courtesy penetration test of HDL's Adelphi Facility was conducted. The penetrations were successful and revealed several security weaknesses which were corrected by the supported command. As a result of the test a number of security guards were transferred and guard procedures were changed. In addition a new magnetic coded badge was approved for purchase in FY 77. As a follow-up implementation of "Lessons Learned" in the penetration test the ICIP Project Liaison Officer (PLO) and the HDL Security Officer prepared and delivered a series of lectures and classes to the HDL guard force on the penetration test. Additionally, the PLO delivered lectures on the penetration test to the faculty and students of the Counterintelligence Dept, US Army Intelligence Center and School, Fort Huachuca, AZ.

d. Operational Status:

(1) During the reporting period 880 manhours were expended, 18 information reports were submitted and 41 memorandums were prepared and provided to the supported commander.

(2) No TDY or b1 were expended.

e. Comments

(1) ICIP CENTAVO KID was approved by OACSI, DA, 18 Oct 73 and the supported commander was briefed on the implementation of the operation on 12 November 1973.

(2) The mission of the HDL includes critical sensitive research and development activities in support of the US Army. Some of the more sensitive activities include research into the hardening of communications equipment against nuclear weapons radiation; tests of nuclear warhead and missile systems to determine their ability to withstand nuclear weapons radiation; develop fuses for use with nuclear warheads and conducts development and testing of radiation hardened systems for Minutemen and Poseidon Missiles.

(3) The installation remains a potential target for hostile intelligence services.

~~CONFIDENTIAL~~

ICIP REPORT

1 April 1975 to 31 March 1976

(C) GONDOLA STAR: (OACSI Revalidation - 16 Jan 76)

a. Location: Aberdeen Proving Ground (APG) and Edgewood Arsenal (EA), Aberdeen, MD

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 to 31 Mar 76:

(1) Confidential and conventional sources employed in the operation surfaced information on adverse suitability pertaining to 13 employees at Aberdeen Proving Ground/Edgewood Arsenal. The suitability information included alcohol and drug abuse, moral improprieties, fraudulent claim on a TDY voucher and mental instability. Action was taken to substantiate or refute the reported allegations.

(2) Sources reported four instances of alien enlistees who were assigned to the sensitive installations. The Installation Intelligence Officer (IIO) was aware of the status of the four, that they did not have security clearances and had no access to classified information.

(3) Sources reported three instances of foreign travel during the period. One of these DOD affiliated employees who traveled to the USSR after attending a scientific conference in Finland is being contacted by US Intelligence. In another instance, a DOD civilian employee visited Poland and Czechoslovakia for about one month in June-July 1975. The employee and his spouse allegedly visited relatives in both countries. The employee has been debriefed by USAINTA. Source reported that the employee plans to travel to these countries again in 1976. In another instance, husband and wife DOD employees took a Smithsonian Institution-sponsored tour to Moscow and Leningrad. The husband has been debriefed by USAINTA and the wife will be debriefed at her convenience. Source reported that the couple planned to take another trip to Russia in 1976.

(4) Sources reported several instances of foreign contact by military and DOD civilian personnel in the supported activity. In one instance a citizen of the Federal Republic of Germany was assigned on an exchange program to work until Sep 76. A report of a civilian DOD employee at Edgewood Arsenal with some unexplained periods of time in his background prompted a request for a Limited Investigation from the supported command.

(5) Sources reported two instances of Swedish citizens visiting the installations. It was determined that the one visit had been fully coordinated with the proper officials. In the second instance, it was determined that the visit had not been properly coordinated but that steps had been taken to insure the visitors would not be given access to classified information until guidance was provided by higher headquarters.

(6) Sources reported numerous instances of security weaknesses or poor security practices. These included unattended offices in which security containers were left open, a CONFIDENTIAL document left unsecured over a three day weekend, poorly controlled access to a classified scientific conference, movement of an office into a building in which no technical survey had been conducted prior to the move, typewriter ribbons and carbon papers not being disposed of as classified waste, and high-ranking civilian employee bringing his eight year old son into a controlled access area where a classified test was being conducted and remaining overnight.

d. Operational Status:

(1) GONDOLA STAR was first approved by OACSI, DA for implementation on 21 May 1965. On 18 Feb 75, the ACSI directed the termination of 12 ICIPS, including GONDOLA STAR, by 31 Mar 75. After reviewing correspondence initiated by the Commander, Aberdeen Proving Ground, which recommended that the ICIP GONDOLA STAR be continued, the ACSI reinstated the operation for a period of six months on 11 Jul 75, subject to a review after the six months elapsed. On 16 Jan 76, the ACSI approved continuation of the ICIP as an ongoing operation. The following statistics are for the period 11 Jul 75 to 31 Mar 76:

(a) During the reporting period 2,223 manhours were expended and 84 written information reports and 16 oral reports were submitted. b1 b1 no TDY funds were expended.

(b) At the end of the reporting period eight confidential sources were being used in the operation.

e. Comments: The ICIP has been a productive operation at a critically sensitive installation. Information obtained as a result of the ICIP and acted upon by the commanders concerned has served to strengthen the security of the installation. The 902d MI Group is conducting a comprehensive review of this operation for possible replacement of the operation by an overt counterintelligence support program.

~~CONFIDENTIAL~~

ICIP REPORT

1 April 1975 to 31 March 1976

(C) LENS HOLDER: (OACSI Revalidation - 4 Feb 75)

a. Location: White Sands Missile Range (WSMR), NM

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 to 31 Mar 76:

(1) Several reports from confidential sources during the period indicated that employees in the TRADOC Systems Analysis Activity (TRASANA) and the Army Missile Test and Evaluation Directorate (ARMTED) were following poor security practices in daily activities and not adhering to security regulations for safeguarding sensitive classified information. These security hazards included leaving security containers open and unattended for periods during the day, failing to complete security forms affixed to classified material containers, leaving classified material in work boxes after duty hours, and laxity on the part of security guards during night shifts. Security Officers of both TRASANA and ARMTED after being provided reports on these weaknesses briefed all their employees on requirements of WSMR Regulation 380-5 (Security Regulation) and reoriented all guard personnel on their security obligations.

(2) A confidential source reported that a US Army Officer assigned to the Office of Missile Electronics Warfare (OMEW) was misappropriating computer parts and electronic equipment which he was taking home to build his own computer. A summary of available information was provided the US Army Criminal Investigation Division Command for investigation by that agency. The same confidential source reported on 4 Feb 76 that two enlisted soldiers in sensitive positions in TRASANA were engaged in drug trafficking, but in separate operations. Local on-post investigation by the White Sands Missile Range Provost Marshal resulted in apprehension of one of the individuals. Information on the second soldier, allegedly involved in large-scale drug transactions and with criminal contacts, was reported to the Sixth Region, US Army Criminal Investigation Division Command for appropriate investigation.

(3) A confidential source reported that unknown persons had attempted on 11 Jan 76 to penetrate TRASANA, which is an Exclusion Area. On 12 Jan 76, the source reported an unidentified individual claiming to be a colonel had been permitted to enter the TRASANA Compound without the required identification. Investigations by the TRASANA security personnel disclosed that there was no substance to the 11 January report and the

~~CONFIDENTIAL~~

person in the 12 January incident was identified and found to be a legitimate entrant into the facility. The incident did serve to illustrate the security awareness of the source and the personnel involved.

(4) A confidential source reported in March 1976 in three reports that devices, such as radios, tape recorders, and "pocket" digital calculators were being brought into a TRASANA Exclusion Area by personnel having access to the area. Many of the computers used in the area have classified information storage and the above-named devices allegedly can affect the computers' operations. The appropriate Security Officer has been appraised of these practices. ICIP project personnel have been tasked to provide follow-up reports on actions taken by the supported command. The information has also been provided as a matter of interest to the Counterintelligence Services and SAVE Team elements at USAINTA.

d. Operational Status:

(1) LENS HOLDER was first approved by the ACSI, DA, for implementation on 16 Sep 74.

(2) Two confidential sources provide coverage of the two principle supported activities, TRASANA and OMEW. An additional individual in the ARMTED is being assessed as a potential source.

(3) During the reporting period, 1,053 manhours were expended. b1 b1 there were no TDY outlays. The operation produced 36 written information reports and 24 memorandums and oral reports.

e. Comments:

(1) The mission of the White Sands Missile Range has remained unchanged since the inauguration of the ICIP and the previous OACSI revalidation on 4 Feb 75. The mission of WSMR is to evaluate the Safeguard Missile System missile vulnerability studies, missile control systems, and perform pre-production tests and analyses of missile systems. The mission of WSMR makes it a prime target of hostile intelligence. Activities at WSMR which have Priority I requirements for support are TRASANA, OMEW, ARMTED, the National Range Operations Directorate, and the US Army Safeguard Systems Evaluation Agency. These elements develop electronic countermeasures techniques to nullify vulnerabilities discovered in missile systems, conduct pre-production tests of rocket and guided missile systems, operate a nuclear effects facility and operate National Range Facilities for tests conducted at WSMR.

Page 2103 of 3957

~~CONFIDENTIAL~~

(2) The operation to date has proven to have value as an adjunct to the installation security program. The isolation of the installation, dispersion of many of its facilities, and the extent and nature of its computer facilities and missile testing ranges present a lucrative target for hostile intelligence service (HOIS) penetration. USMR's proximity to the US-Mexican border renders it vulnerable to HOIS operations based in a foreign country. Admittedly, the operation to date has not surfaced hard evidence of HOIS presence or penetration, but the scope of the threat must be recognized. Details of activities conducted at the site are of current interest to HOIS. The two-pronged capability of the ICIP, that is, extensive use of overt sources of all types, plus the covert effort exemplified by the confidential sources, appears to be necessary coverage at this time with the best potential for detection and discovery of HOIS activities.

ICIP REPORT

1 April 1975 to 31 March 1976

(C) LENTIL MONKEY: (OACSI Revalidation - 4 Feb 75)

a. Location: Defense Language Institute (DLI), Presidio of Monterey, CA

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr.75 to 31 Mar 76:

(1) A source in the Chinese-Mandarin Language Department furnished information concerning a temporary instructor of that department who closely questioned her students about their knowledge of their future duties and assignments. She frequently expressed her displeasure in the task of teaching Chinese to students which would enable them to "conduct spying activities" directed at the People's Republic of China (PRC). The instructor also displayed a rebellious and uncooperative attitude toward necessary DLI administrative requirements. Born in Canton, China, she was a British citizen and no evidence of a pre-employment investigation could be found. DLI refused to renew her contract when it expired in Sep 75 and she departed DLI in that month.

(2) A Confidential Source reported information on an instructor of the German Language Department who travelled to East Germany in mid-1975 without notification or permission from DLI authorities. Upon completion of the travel, the instructor was admonished officially and informed that any future violation of the DLI regulations on foreign travel would result in temporary suspension.

(3) A visitor to the Russian Language Department in May 75 requested copies of training material used in the Russian Dept, claiming that he wanted it to use for language training in his reserve unit. The visitor was given two unclassified training exercises. Subsequent investigation identified the visitor and established that he was a former graduate of Russian at DLI, and additionally, that he was a bona fide member of a California-based Army Reserve unit. The incident, although not of a major significance as proven by the later investigation, did serve to underscore a need for better visitor control at DLI. The Director, DLI, placed special emphasis on this and the need for all personnel to be alert for unauthorized visitors and proper procedures for handling them. New visitor requirements and restrictions were published and distributed throughout DLI.

(4) An instructor in the Hungarian Language Department travelled to Hungary in Sep 75 with a stated purpose of visiting relatives. A review of the instructor's file revealed extensive foreign travel in Europe since 1971 and frequent contact with relatives and other persons in Hungary. File checks and inquiries of other agencies failed to reveal any substantial derogatory information concerning the instructor, but the potential hostage situation is evident in the continuing contacts. Monitoring of the instructor's activities continues.

(5) An ICIP source reported that an instructor in the Russian Language Department allegedly is a former member of the Soviet Army's equivalent to the US Army Security Agency who while in the Soviet Army received special training in English. This instructor left the USSR in Apr 74 and was hired at DLI in Oct 74. A coworker of the instructor left the Soviet Union in Apr 75 and was also hired as an instructor at DLI in Jul 75. Both of the instructors taught together at the Leningrad Herzen Pedagogical Institute in Leningrad in the late 1960s and early 1970s. The sequence of these events illustrate how quickly these individuals are able to secure employment after leaving the USSR, employment in which they are placed in extremely close contact with US intelligence personnel. Monitoring of the activities of these individuals continues.

(6) Two instructors in the Bulgarian Language Department who are man and wife were accused by fellow faculty members at DLI of being communists because of the unexplained details of their emigration to the West and the manner in which they left Bulgaria. The allegations led to charges and countercharges; full details of the incident were provided the FBI. The wife remains at DLI as an instructor, but as of the close of the reporting period on 31 Mar 76, the husband was employed elsewhere and no longer DOD-affiliated.

(7) A DLI employee of the Hebrew Project at DLI also created considerable internal dissension and bickering within the Hebrew Department when he maintained close contact with the Israeli Consulate in San Francisco. This caused associates to become suspicious of his motives and high level contacts. The employee, an alien with an impressive background, including possible intelligence activities, later applied for employment with the National Security Agency (NSA), which has been provided all information available to USAINTA.

(8) A confidential source reported that a Czechoslovakian Language Department (CLD) instructor was planning to withdraw her retirement fund money and return to Czechoslovakia with her two sons, allegedly to live there.

Page 2106 of 3957

SECRET

b1 Per FBI

At the close of the reporting period possible health problems appeared as a deterrent to the wife's original plans, but definite decisions in this regard are unknown.

b1 Per FBI

(9) A second CLD instructor has disclosed to several sources over the last two years his continuing efforts to obtain the release of his children from Czechoslovakia. The Czech Government recently informed the instructor that he could obtain the release of his children if he pays the Czech Government $66,000 as reimbursement for the cost of the time the instructor spent in a Czech prison and an education tax on the education acquired in Czechoslovakia by the instructor and his wife. The instructor disclosed that the Czech military had changed its method of counting. The reports indicate that the instructor is maintaining close, continuing ties with Czech Government officials and that a hostage situation with his children exists. Monitoring of his activities continues.

(10) Monitoring also continues on activities of a Polish Language Department (PLD) instructor who plans to visit his mother and a brother in Warsaw in mid-1976. The instructor has not applied formally to DLI for approval for the leave and the trip. The instructor frequently has travelled in the past to Europe. His brother, a medical doctor also travels extensively, and has been in the US and Canada often during the last 20 years. During a 1974 visit to the US, the instructor's brother visited DLI, attended PLD functions at DLI, talked with the US Army students at length and photographed many of the students in attendance. US Customs once detained the instructor's brother at the Canadian border for attempting to smuggle Communist propaganda into the US; US Customs confiscated the propaganda.

(11) An instructor in the Russian Language Department apparently is suffering from mental problems. The instructor has written to a California US Senator, a nationally syndicated columnist, and the FBI, alleging that he is constantly under surveillance by the Soviet KGB and US intelligence and further, that his life is in danger. The instructor also has sent a telegram to the President of the United States. Both the FBI and the Secret Service have made inquiries into the matter and conducted local investigations of the instructor. On 23 Mar 76, the DLI Commandant directed the instructor to undergo psychiatric evaluation. Initially, the instructor refused and was suspended from his duties administratively. At the end of the reporting period the instructor agreed to the examination. The results and final disposition are pending.

Regraded SECRET
ON 30 MAR 1998
By CDR USAINSCOM FOI/PO
Auth Para 6-601 DOD 5200.1R

SECRET

d. Operational Status:

(1) LENTIL MONKEY was first approved by ACSI, DA, for implementation on 11 September 1967.

(2) During the reporting period, 4,603 manhours were expended. b1 there were no TDY outlays.

(3) Production consisted of 360 written information reports and 220 Memorandums and oral reports.

(4) Eight confidential sources were active in the ICIP at the close of the period and additional coverage of language departments and administrative sections of DLI was obtained by 16 conventional sources.

e. Comments:

(1) The mission of DLI is to train DOD intelligence and communications security specialists in every major foreign language. Military attaches, employees of the CIA and FBI, as well as other federal agencies, are also trained at DLI, making it an extremely enticing target for hostile intelligence service operatives. The majority of the faculty of DLI have foreign backgrounds, some have only recently arrived from Communist Bloc countries and rapidly achieved employment in an installation where most of the students are in intelligence or destined for intelligence assignments upon graduation. Many of these instructors are in hostage situations by virtue of close, living relatives in the ComBloc countries with whom they maintain written contact and closer, if less frequent, personal contact. In maintaining contact with these ComBloc countries for any reason whatsoever, intelligence agencies of those countries in all likelihood have identified the instructors' place of employment and may have contacted them under one guise or another.

(2) In addition to extensive and frequent contacts with the governments of HoIS, many instructors who probably are completely imbued with the American way of life and are now US citizens or who intend to become citizens, nevertheless are vulnerable targets. The instructors acquire personal acquaintances among many intelligence personnel and, in the course of teaching and associating with the military in year-long classes, learn of the students' future assignments and do in some instances correspond with DLI alumnae after graduation. This unique characteristic of conditions at DLI serves to make the Institute an even more attractive target for HoIS approaches.

(3) As shown by statistics in paragraph d(2), and d(3), above, ICIP LENTIL MONKEY is the most productive of all the presently active ICIPS with a total of 360 written reports. Though 4,603 manhours were expended in the project, the actual cash outlay of b1 for the

~~CONFIDENTIAL~~

year, the lowest cost figure for any of the active ICIPS. Viewed from the cost-yield ratio alone, this operation is an extremely successful, economical effort.

MEMORANDUM THRU: ~~VICE CHIEF OF STAFF, UNITED STATES ARMY~~

NOTED USA 12 APR 1976
Date.....

FOR: ~~UNDER SECRETARY OF THE ARMY~~

COL John A. Todd, Exec., SAUS

SUBJECT: Internal Counterintelligence Program (ICIP) (U)--
INFORMATION MEMORANDUM

1. (U) During the past quarter, six of the currently active Internal Counterintelligence Program (ICIP) operations provided information on incidents involving personnel suitability and conditions reflecting poor security practices or weaknesses. Reports of these relatively minor conditions were furnished the commanders of the supported commands who took immediate corrective action.

2. (U) The total number of active ICIP operations remains at nine. Summaries of activity in these operations during the last quarter are inclosed.

DEPARTMENT OF THE ARMY
HEADQUARTERS
U.S. ARMY INTELLIGENCE AGENCY
FORT MEADE, MARYLAND 20755

MAY 11 1976

MIIA-SO-SA

SUBJECT: Report of Internal Counterintelligence Program (ICIP) Operations (U)

HQDA (DAMI-DOH/COL HAENDLE)
WASH DC 20310

1. (U) (C) During the 3d Quarter, FY 1976, two of the on-going ICIP operations were terminated effective 31 March 1976, CANTER RIDE at Redstone Arsenal, AL, and CANARY EFFORT at Fort Ritchie, MD. The Commander, USAINTA, and the ACSI verbally approved termination actions on 20 and 23 February 1976, and separate correspondence requesting formal termination was submitted to ACSI, DA, on 8 April 1976. The total number of active ICIP operations at the close of the 3d Quarter was seven. Summaries for each of these seven operations, plus the two which were terminated, are attached as TAB A, which is the quarterly report for the period ending 31 Mar 76.

2. (U) (C) The former Project Liaison Officers (PLO) of the two terminated ICIPS, CANARY EFFORT and CANTER RIDE, are continuing to provide counter-intelligence support to the sensitive elements at Redstone Arsenal and Fort Ritchie. These activities now receive comprehensive assistance through an overt, all-source, multi-discipline effort named the Direct Support Comprehensive Counterintelligence Program (DSCCP). A review of ICIP Operations CANINE PLATE, CENTAVO KID, and CENSUS TIME is currently being conducted to determine which of these operations should be converted to the DSCCP concept.

3. (U) (C) Through a comment on the DAMI-DOH Information Memorandum to the Under Secretary of the Army, subject: ICIP Program, dated 1 April 1976, the Under Secretary indicated that an analysis of each ICIP operation for the past year was to be provided with the next quarterly review. In compliance with those instructions, an analysis of each ICIP operation was made for the period 1 April 1975 to 31 March 1976. As a result of these analyses, five ICIPS (TAB B) are recommended for termination; four ICIPS (TAB C) are recommended for retention. At TAB D are statistics

1. ~~(S)~~ CANARY EFFORT: (OACSI Revalidation - 4 Feb 75)

a. Location: Fort Ritchie, MD

b. Confidential Source Utilization: Three

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) On 15 January 1976, the PLO, as a result of a liaison visit with the Baltimore Division of the Federal Bureau of Investigation obtained data on the presence of Sino-Soviet Bloc personnel travelling within the environs of the target areas and information on those Sino-Soviet bloc personnel residing temporarily in the environs of the target area.

(2) On 28 January 1976 a member of the 572d Military Police Co, Ft Ritchie, was approached by an unidentified individual at Hagerstown Junior College, Hagerstown, MD, who claimed to be employed at Site R. The individual described Site R in general terms, but made no attempt to elicit information from the soldier. Investigative efforts failed to identify the individual. All available information was provided the Hagerstown Resident Office of the FBI. A USAINTA investigation of the incident is continuing.

(3) On 28 January 1976, an unidentified individual approached a soldier assigned to the US Army Communications Command East Coast Telecommunications Center (USACCECTC) and requested a tour of that facility. The individual appeared interested in the antenna configuration of Satellite Communications/Direct Communication Links (SATCOM/DSL). The request for the tour was refused; the soldier reported the incident. All available information was provided the Hagerstown Resident Office of the FBI. USAINTA investigation of the incident is continuing.

(4) During the reporting period information was developed on a Non-Appropriated Fund (NAF) employee who is a bartender employed at the Ft Ritchie NCO Club. The bartender allegedly claimed to patrons that she was in the employ of both "Military Intelligence" and the "CIA." An investigation is being conducted by USAINTA.

(5) On 18 March 1976, a US Army NCO assigned sensitive duties in the Alternate National Military Command Center (ANMCC) volunteered information concerning his entering into correspondence with an agency of the East German Government. The NCO, who has been researching his family history for the last six years, was attempting to obtain a record of the military service of his great-great grandfather in the period circa 1810. In the course of an inquiry to the Federal Republic of

Germany (FRG) Ambassador in Washington and the FRG Government, he was advised to contact the German Historical Central Archives in East Germany. The NCO volunteered the information so it could be made a matter of official record in the event he should be contacted in any fashion by East Germany in the future. The Chief, ANMCC, was provided information on the above. The NCO was given a SAEDA briefing under the provisions of AR 381-12 with special emphasis on reporting procedures. The NCO will provide Army Intelligence with copies of any correspondence he receives in this regard. At present the opportunity for further exploitation appears minimal.

e. Operational Status:

(1) In February 1976, the 902d MI Group selected Operation CANARY EFFORT to be terminated and replaced by a Direct Support Comprehensive Counterintelligence Program (DSCCP) which is being developed by the 902d MI Group. Supported commanders were briefed on the termination in conjunction with the scheduled quarterly briefings as described below. All confidential sources used in this ICIP have been terminated. The CDR, USAINTA, and the ACSI indicated verbal approval of the termination on 20 and 23 February 1976, respectively. The effective termination date for CANARY EFFORT is 31 March 1976.

(2) During the quarter, the PLO presented 21 SAEDA/Threat/Security Awareness briefings to personnel assigned to supported activities at Fort Detrick and Fort Ritchie.

(3) The PLO presented the Quarterly Progress Briefing to LTC Dale S. Cockle, CDR, USACC ECTC, on 30 March 1976.

(4) The PLO, on 1 April 1976, presented the Quarterly Progress Briefing to COL John S. Eberle, CDR, US Army Communications Command (USACC) Site R.

(5) On 5 April 1976, the PLO gave the Quarterly Progress Briefing to the supported command, HQ, 7th Signal Command and Ft Ritchie, with the following officials present: COL Harold G. deMoya, CDR, Ft Ritchie; COL John J. Plosay, Jr., Deputy CDR, Ft Ritchie and Mr. Joseph J. Carroll, Acting Assistant Chief of Staff, Intelligence and Security, 7th Signal Command and Ft Ritchie.

e. Operational Status:

On 18 February 1976, COL Hassel Parker, CDR, 902d MI Group, with the Project Liaison Officer (PLO) in attendance, provided a special briefing on this operation to MG Turnmeyer, CDR, USAMICOM. COL Lange, USAMICOM Chief of Staff, was also present during the briefing. As a result of the briefing, it was agreed by the participants that since the operation had accomplished its objective it should be terminated and the insert source should be extracted to reduce the risk of compromise. MG Turnmeyer expressed his deep appreciation for the information provided by the operation and concurred with the suggested termination. The source used in this operation has been reassigned and will be debriefed subsequent to his 8 April 1976 reporting date. The CDR, USAINTA, and the ACSI, DA indicated verbal approval of the termination on 20 February and 23 February 1976, respectively. The effective termination date for CANTER RIDE is 31 March 1976.

5. (C) CENSUS TIME: (OACSI Revalidation - 4 Feb 75)

a. Location: Pentagon Telecommunications Center (PTC), US Army Communications Command (USACC), The Pentagon, Washington, DC

b. Confidential Source Utilization: None

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) The Limited Investigation reported in the last quarter on the PTC NCO who had attempted suicide and allegedly had involved himself in financial troubles, drugs, and homosexuality was completed and referred to PTC for adjudication. The decision was made not to revoke the NCO's security clearance since he left the service on 9 April 1976 and will not be allowed to re-enlist.

(2) During the course of an investigation of an enlisted WAC member of PTC with a SECRET security clearance who was Absent-Without-Leave, it was discovered that CID, Ft Meyer was also investigating her for theft and trafficking in drugs. The Project Liaison Officer (PLO) and CID agents coordinated their mutual investigations. Drug charges are pending the results of laboratory tests of substances purchased from the WAC by CID informants. PTC has suspended the WAC's access to classified material pending completion of the investigation.

(3) The PLO arranged with appropriate 902d MI Group elements to present formal SAEDA briefings to all PTC personnel, including the PTC elements in the Hoffman and Forrestal Buildings. This project is scheduled for completion in the next quarter.

e. Operational Status:

(1) The Hoffman Telecommunications Center has been brought under coverage of this ICIP, as requested by COL Donald E. Clark, PTC Commander, in the previous quarter.

(2) On 24 March 1976, the PLO presented the Quarterly Progess Briefing to COL Clark, CDR, PTC. CW2 Leonard Gross, Alternate PLO, was also present at the briefing.

6. (C) CENTAVO KID: (OACSI Revalidation - 4 Feb 75)

a. Location: Harry Diamond Laboratories (HDL), Adelphi, MD

b. Confidential Source Utilization: None

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) As a follow-up implementation of "Lessons Learned" in the courtesy penetration test conducted at HDL's Adelphi Facility in the previous quarter, the Project Liaison Officer (PLO) and the HDL Security Officer prepared and delivered a series of lectures and classes to the HDL Guard Force on the penetration test. The Guard Force is operating under new instructions designed to thwart attempted penetrations. A new HDL Badge and Pass System, utilizing a magnetic coded badge and a computer control device, will be started in mid-1976.

(2) The PLO delivered lectures on the penetration test conducted at HDL to the faculty and students of the Counterintelligence Dept, US Army Intelligence Corps School, Fort Huachuca, AZ, on 20 and 21 January 1976.

(3) The PLO, assisted by other 902d MI Group personnel conducted several technical inspections at HDL. The PLO provided advice and assistance at several design meetings concerning new buildings at HDL.

(4) Other security advice was provided by the PLO to the Woodbridge Research Facility (WRF), Woodbridge, VA, and the Gaithersburg Test Site (GTS), Gaithersburg, MD. The PLO assisted in devising Operational Security techniques at these sites, the only HDL facilities at which outdoor testing takes place. HDL requested to be placed on distribution for the SATRAN II system but had not received any output from the system as of the close of the reporting period.

e. Operational Status:

On 16 March 1976, the PLO presented the Quarterly Briefing to MAJ Kenneth F. Keller, Executive Officer, HDL, and Mr. James F. Yeick, Security Officer, HDL.

b. Confidential Source Utilization: Two

c. Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) A confidential source reported that unknown persons had attempted on 11 January 1976 to penetrate the TRADOC Systems Analysis Activity (TRASANA). On 12 January 1976, it was reported that an unidentified individual claiming to be a colonel had been permitted to enter the TRASANA Compound. These incidents were reported immediately to the Security Officer, TRASANA. An investigation by TRASANA security personnel disclosed that there was no substance to the 11 January report and the person in the second incident of 12 January was identified and found to be a legitimate entrant into the facility. The incidents did serve to illustrate the security awareness of the source and the personnel involved.

(2) A source surfaced information on 4 February 1976 that two enlisted soldiers at TRASANA were engaged in drug trafficking, but in separate individual operations. Local on-post investigation resulted in apprehension of one of the individuals. All available information on the second individual was reported to the Sixth Region, US Army Criminal Investigation Division Command for appropriate action.

(3) A confidential source reported in March 1976 in three reports that such devices as radios, tape recorders, and "pocket" digital calculators were being brought into a TRASANA Exclusion Area by personnel having access to the area. These devices reportedly could affect the computers used in the area, some of which have classified data in storage. The Activity Security Officer has been briefed on these alleged practices and ICIP project personnel have been tasked to provide follow-up reports on action taken by the supported command. The information contained in the reports has been provided to the Counterintelligence Services and SAVE Team elements at USAINTA as a matter of interest.

e. Operational Status:

(1) The two confidential sources provide coverage of TRASANA and the US Army Electronics Command, Office of Missile Electronics Warfare (OMEW), WSMR. One individual assigned to the US Army Missile Test and Evaluation Directorate is under assessment as a potential source.

(2) The Quarterly Progress Briefing, postponed at the request of MG O. L. Tobiason, CDR, WSMR, will be presented during the next quarter.

b. (U) Confidential Source Utilization: Eight

c. (U) Information Obtained or Reported on Non-Affiliated Civilians: None

d. Useful Information Obtained:

(1) (S) The female instructor in the Czechoslovakian Language Department reported in the last quarter as preparing to resign her position and return to Czechoslovakia now is reportedly having serious health problems.

Referred

(2) (U) A Polish Language Department instructor plans to visit his mother and a brother in Warsaw in mid-1976, a confidential source has learned. The instructor has submitted no formal request to DLI for the trip yet. The instructor's activities are monitored as a matter of intelligence interest because of his and his brother's travels. His brother, a medical doctor has visited in the US and Canada frequently over the last 20 years and was once detained by US Customs at the Canadian border for attempting to smuggle Communist propaganda into the US. During a 1974 visit to the US, the instructor's brother visited DLI, attended Polish Language Department functions, talked with and photograhed the students. USAINTA is monitoring the instructor's activities.

(3) (U) A Czech language instructor is continuing his efforts to obtain the release of his children from Czechoslovakia. A confidential source surfaced the most recent information that the Czech Government has informed the instructor he could get his children out of the country if he pays the Czech Government $66,000. ($6,000 for the cost of his time in a Czech prison and $60,000 as an educational tax on his and his wife's education.) Source did not have further information on this particular aspect, but reported that in mid-February 1976 the instructor gave many of the DLI Czech students a list of newly published books in the Czech language. The books are distributed by a Canadian firm, "Sixty Eight Publishers," Box 695 Station A, Toronto, Ontario M5W 1G2 Canada. The instructor told his classes that the Czech military had officially changed their method of counting for example, using "21" instead of "1 and 20." Insignificant in itself, this last item indicates that the instructor is maintaining ties with Czechoslovakian officials. USAINTA is monitoring the instructor's activities.

~~CONFIDENTIAL~~

(4) Information developed from official sources during the period disclosed that an instructor of the Russian Language Department (RLD) apparently is suffering from mental problems. The instructor has written letters to a California senator, a nationally syndicated columnist, and the FBI, alleging that he is under surveillance of Soviet and US intelligence constantly and that his life is in danger. The Commander, USAINTA, provided a summary report on the instructor to the ACSI. The instructor later sent a telegram to the President of the United States. Both the FBI and the Secret Service have made inquiries into the matter. On 23 March 1976, the Commandant, DLI, took administrative action directing the instructor to undergo psychiatric evaluation. The instructor refused initially and was administratively suspended from teaching. At the end of the quarter, the instructor agreed to the examination and final disposition of the matter is pending.

e. Operational Status:

(1) As a result of the RLD incident described in d(4), above, the DLI Commandant has directed that the Civilian Personnel Office and Security Office screen records of faculty members for indications of mental problems. Once identified, action will be taken to obtain treatment for the individuals concerned.

(2) Eight confidential sources were utilized during the quarter; three sources were terminated due to graduation. Four new confidential sources were recruited, including one Technical Language Assistant (TLA). Fifteen individuals are under assessment as possible sources, including one instructor and one TLA. In addition to the confidential sources, there are 16 conventional sources providing coverage of seven language departments and the DLI staff.

(3) On 29 March 1976, the PLO presented the Quarterly Briefing to COL Samuel L. Stapleton, Commandant, DLI. Also present at the briefing were COL Donald K. Bradbury, CDR, 525th MI Group; MAJ Trevor Bissey, CDR, San Francisco Field Office, 525th MI Group; CPT Brendon A. Niques, SAIC, Ft Ord Resident Office, 525th MI Group; and Mr. James Green, Asst Security Officer, DLI.

ICIP REPORT

1 April 1975 to 31 March 1976

(U) CANARY EFFORT: (OACSI Revalidation - 4 Feb 75)

a. Location: Fort Ritchie, MD

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 - 31 Mar 76:

(1) Confidential and conventional sources employed in the operation surfaced information on adverse suitability pertaining to 86 employees at Fort Ritchie, all of whom had security clearances and access to one of the sensitive activities supported. The suitability information included the entire spectrum in this category - alcohol and drug abuse, moral improprieties and mental instability. In these instances investigative action was taken to refute or substantiate the allegations or the individuals were removed from access to classified information. About 50% of the cases reported involved some degree of drug abuse; these were referred to the Criminal Investigation Division for action.

(2) Two separate reports were received concerning suspected Soviet Intelligence presence and interest in the activities of the supported installation. Details of these reports were provided the FBI in May 1975 In one instance an individual resembling a known KGB agent paid an unusual amount of attention to shipment of sensitive cargo to Fort Ritchie; in the second instance an individual assigned to Fort Ritchie reported that a second person whom he had met claimed to be in contact with the Soviets in Hagerstown, MD. As of 31 Mar 76, the FBI investigations of the reports were inconclusive.

(3) An ICIP source reported a possible compromise occurred when the Telecommunications Directorate, Site R, was tasked to prepare a special test tape containing test messages which could be used for coding and to devise compatibility between two computer systems. The test tape, though it consisted only of innocuous, unclassified messages, also contained fragments of sensitive, highly classified messages which had been picked up from residual magnetism on the reels of the equipment when the messages were recorded. This latter condition was not discovered until processing to make the systems compatible took place, after the tape had lain unsecured, in open storage, for about six weeks. A command investigation of the incident followed and a determination was made that apparently a compromise had not occurred, but as a result of the incident, changed security procedures were put into effect for the handling and storage of computer tapes, reels, and discs.

(4) (U) Two possible SAEDA approaches to soldiers stationed at Fort Ritchie in January 1976 are currently under investigation by USAINTA and the FBI. Reports of a Fort Ritchie NCO Club bartender professing to be employed by the "CIA" and "military intelligence" are currently being investigated by USAINTA.

(5) (U) In March 1976, an Army NCO assigned sensitive duties at Fort Ritchie volunteered that he had contacted by letter an agency of the East German Government. The NCO desired to make the matter of the contact part of official records in the event he should be later contacted by any agency or person from East Germany. Though the NCO's action was part of his research of his family history and ostensibly is an overt, sincere effort on his part, the East German Intelligence Services (EGIS) often take such opportunities to make intelligence approaches, especially if the US soldier-target has special clearances and access to sensitive information. The NCO is under instructions to report any responses to his letter.

d (U) Operational Status:

(1) (U) CANARY EFFORT was first approved for implementation by OACSI, DA, on 11 June 1965.

(2) (U) In Feb 76, the 902d MI Group selected Operation CANARY EFFORT to be terminated and replaced by an overt, direct support counterintelligence program. Supported commanders were briefed on the termination action during the quarter ending 31 Mar 76. All confidential sources used in the ICIP have been terminated. The CDR, USAINTA, and the ACSI verbally approved the termination on 20 and 23 Feb 76, respectively.

(3) (C) During the reporting period, b1 b1 $80.00 in TDY and travel, and 3,255 manhours were expended.

(4) (U) The Operation yielded 69 information reports and 116 other reports which were chiefly verbal reports provided to the supported commanders.

e (U) Comments: The ICIP at Fort Ritchie clearly has been a productive operation at a critically sensitive installation. Information obtained as a result of the ICIP and acted upon by the commanders concerned has served to strengthen the security of the installation. The 902d MI Group believes that effective counterintelligence support to the installation can be continued under an overt comprehensive counterintelligence support program, which replaced the present ICIP effective 31 Mar 76.

f (U) Recommendation: None.

~~CONFIDENTIAL~~

Page 2130 of 3957

ICIP REPORT

1 April 1975 to 31 March 1976

(C) CANINE PLATE: (OACSI Revalidation - 4 Feb 75)

a. (U) Location: Seneca Army Depot (SAD), Romulus, NY

b. (U) Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. (U) Significant Information Obtained During Period 1 Apr 75 to 31 Mar 76: There was no significant information obtained during the period and there were no indications of any overt threat to the installation.

d. (C) Operational Status: CANINE PLATE was first approved by OACSI, DA, for implementation on 18 Sep 73. During the reporting period 400 manhours were expended in the ICIP. However, there were no reports submitted, no funds expended, neither TDY nor [b1] There were no confidential sources utilized, only conventional sources.

e. (U) Comments: The installation's mission remains the same, a supply depot for missile and artillery weapons systems with a nuclear capability. The Depot is considered a critical and sensitive installation; therefore, remains as a potential target for HOIS. However, there was no information reported to indicate the presence of any overt threat to the installation. The MI Group has been conducting a thorough review of the ICIP to determine the advisability of terminating the operation.

f. (U) Recommendation: That the ICIP CANINE PLATE be terminated but that increased overt liaison with additional security support be provided the installation commander.

ICIP REPORT

1 April 1975 to 31 March 1976

(C) CANTER RIDE: (OACSI Approval - 4 Mar 75)

a. Location: US Army Missile Command (USAMICOM), Redstone Arsenal, AL

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 to 31 Mar 76:

(1) An inserted covert confidential source was employed in this operation to attempt to learn the existing situation in the Optical Guidance Technology Office (OGTO), Advanced Sensors Directorate, USAMICOM, when reports received in 1974 alleged that lax security practices had led to loss and possible compromise of classified information and that several employees were engaging in sex orgies in offices during the day. In Sep 74, the CG, USAMICOM, conducted a Command Investigation as a result of these reports under the provisions of Army Regulation 15-6. As a result of that investigation, the CG, USAMICOM, requested that an ICIP operation be conducted in OGTO. The Source, once in place, had to rely chiefly upon elicitation to obtain his information because of his covert status, but during the period, did succeed in surfacing adverse suitability information on a civilian physicist with access to sensitive, SECRET information which indicated that he was probably the catalyst for the sexually-oriented activities of the OGTO employees. The employee, apparently obsessed with sex, had numerous extra-marital relations during the last five years. The Commander, USAMICOM, was provided a summary of information on the employee for appropriate command action. The employee transferred to another office in USAMICOM, which apparently broke up the clique and Source could uncover no new evidence of continuing activities among the remaining employees.

(2) In addition to the above, the Source provided substantial information on security weaknesses in the supported command to include poor housekeeping practices, lack of control of reproduction facilities, lack of proper control of area access, lax security attitudes, and possible compromise of security badges through continued losses by individuals. Source provided such security weakness and hazard details to the Project Case Officer who relayed it to overt MI project personnel at Redstone. The Project Liaison Officer provided these reports to the USAMICOM Commanding General and appropriate security personnel who have taken actions to remedy the security weaknesses.

637

d. Operational Status:

(1) CANTER RIDE was first approved by OACSI, DA, for implementation on 4 Mar 75.

(2) During the period, $1,315 in TDY and travel expenses were incurred [redacted] b1 A total of 697 manhours were expended in the operation.

(3) The operation yielded one Summary of Information and several oral reports on security weaknesses.

(4) As the result of an 18 Feb 76 briefing presented to the USAMICOM Commanding General, the MI Group conducting the Operation, the project personnel, and the supported commander concurred in findings that the Operation had accomplished its original objective and should therefore be terminated. The CG, USAMICOM, declared that the operation was a success. The insert Source used in the operation has been withdrawn and reassigned. The CDR, USAINTA, and the ACSI verbally approved the termination of CANTER RIDE on 20 and 23 Feb 76, respectively.

e. Comments: Counterintelligence support continues to be provided by elements of the MI Group stationed at USAMICOM.

f. Recommendation: None.

~~CONFIDENTIAL~~

ICIP REPORT

1 April 1975 to 31 March 1976

(C) CANVAS TAX: (OACSI Revalidation - 4 Feb 75)

a. Location: Sierra Army Depot (SIAD), US Army Materiel Command, Herlong, CA

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During the Period 1 April 1975 to 31 March 1976:

(1) Reports alleged the use of illegal drugs by military personnel at SIAD. However, no details were available.

(2) Information was reported that an exclusion area personal identification badge was missing and that an inquiry failed to find or determine how the badge was lost. As a result of the missing badge incident, new identification badges were issued.

(3) An enlisted man assigned to SIAD was charged with malicious damage of a generator at SIAD and his security clearance was revoked by the Commander, SIAD.

d. Operational Status:

(1) During the reporting period 616 manhours were expended and 14 Agent Reports were submitted.

(2) TDY funds totalling $29.35 were expended; there were no b1 expenses.

(3) At the end of the reporting period two confidential sources were being used.

e. Comments:

(1) This ICIP was administratively implemented in April 1974.

(2) The mission of the Sierra Army Depot (SIAD) is the operation of the Depot for the receipt, storage, issue, maintenance, and disposal of missile and artillery weapons with a nuclear capability. Included in the items handled by SIAD are ammunition, special weapons materials, propellants, explosive components of guided missiles, supplies, petroleum and chemical supplies, fire control test and measuring equipment, and other special weapons with a nuclear capability. SIAD also maintains a capability for systems modification in support of the joint AEC/DOD test firing programs.

639

Classified by ...CDR USAINTA.....
EXEMPT FROM GENERAL DECLASSIFICATION
SCHEDULE OF E.O. 11652
EXEMPTION CATEGORY 2
DECLASSIFY ON ...31 DEC 76...

~~CONFIDENTIAL~~

(3) Sierra Army Depot is the major storage area for special weapons in the western part of the US. The special weapons that formerly were located at the Safeguard anti-Ballistic Missile Site and Savanna Army Depot are now at SIAD, which elevates it to one of the most important special weapons repositories in the US. The Depot is located in a remote area and its contents make it not only of interest to hostile intelligence, but also a target of terrorist groups who are involved in nuclear theft and blackmail.

(4) The Department of Army Sensitive Installation and Unit List, January 1976, lists SIAD as "Critically Sensitive (CS)."

(5) A large portion of the work force is in exclusion areas so access to them on a daily basis is severely restricted for project personnel. Coverage of these areas by confidential sources thus becomes necessary for effective CI coverage. A 20 Sep 75 report of the Nuclear Defense Agency entitled "Adversary View and Support - Nuclear Weapon Site Security; Adversary Capabilities," in assessing terrorist groups tactics employed to acquire a nuclear device and options available, cites the method most likely to succeed as one in which a member of the regular work force has been approached, recruited and is on the terrorist groups payroll. The detection of this type of activity among members of a work force in an exclusion area is greatly enhanced by employing a confidential source program. At the close of the reporting period, two confidential sources were being utilized in the operation to cover the Priority I Exclusion Area. A third individual is under assessment as a potential confidential source.

(6) Hostile intelligence services have high priority collection objectives pertaining to such activities as those conducted at SIAD.

(7) The SIAD, as outlined briefly in subpara (5) and (6), above, appears highly vulnerable to a double threat, that posed by the increasingly active terrorist groups who operate on a global scale and the ever present threat of HoIS penetration. The ICIP is necessary as an additional means to provide "early warnings" to assist the Commander in formulating necessary plans and taking proper action to protect the sensitive and highly-destructive special weapons stored at this location.

(8) At the most recent Quarterly Briefing on 13 Feb 76, the SIAD Commander indicated that he was pleased with the type of support being provided and requested continuation of the ICIP.

f. Recommendation: In view of the above, recommend that ICIP CANVAS TAX be continued.

ICIP REPORT

1 April 1975 to 31 March 1976

(U) CENSUS TIME: (OACSI Revalidation - 4 Feb 75)

a. Location: Pentagon Telecommunications Center (PTC), US Army Communications Command (USACC), The Pentagon, Washington, DC.

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During the Period 1 April 1975 to 31 March 1976:

(1) An ICIP source reported that a PTC civilian employee was transferred from the coding and decoding section because he had coded an obscene message that was to be sent to an overseas user. Additionally, the ICIP source provided information concerning possible security violations involving the employee. Because of the employee's questionable suitability characteristics and conduct he was assigned to a job in PTC requiring minimum contact with classified information. Supervisors will continue to monitor his conduct and activities.

(2) An Army NCO assigned to PTC attempted to commit suicide by slashing his wrists. As a result of the information gained concerning the suicide attempt a Limited Investigation was initiated. The NCO was assigned to the Logistics Branch, PTC, pending results of the investigation. The investigation revealed that the NCO has a large number of outstanding debts, has lied on loan applications, and had ordered a 1976 automobile which cost in excess of five thousand dollars. Interviews concerning the NCO revealed alleged drug usage and homosexuality. The Limited Investigation was completed and referred to PTC for adjudication. The decision was made not to revoke the NCO's security clearance since he left the service on 9 April 1976 and will not be allowed to re-enlist.

(3) Adverse suitability information was reported on two additional NCOs assigned to PTC. Based on medical reports and rebellious attitudes one NCO was released from the Army by board action. The second NCO after a night of heavy drinking began hitting his wife when she tried to arouse him after he had "passed out." The wife filed assault charges with the Military Police but withdrew them later. The PTC commander counselled the NCO on his drinking and marital problems and assigned him duties where he has no access to classified information.

(4) During the course of an investigation of an enlisted WAC member of PTC who was away-without-leave (KAWOL Investigation), it was discovered that the CID was also investigating her for theft and trafficking in drugs. The MI representative and CID agents coordinated their mutual investigations. PTC has suspended the WAC's access to classified material pending completion of the investigation.

d. Operational Status:

(1) CENSUS TIME was first approved by OACSI, DA, for implementation on 5 Feb 74.

(2) During the period of 1 April 1975 to 31 March 1976, 726 manhours were expended, no TDY nor b1 funds were used. The operation produced seven information reports. One confidential source was used during the period but was terminated during the latter part of the period.

e. Comments: The PTC operations include an extremely high volume of multimedia ultra sensitive compartmented classified traffic processed at the highest level of the military establishment command group being served, and includes the cryptographic operation, maintenance and logistical mission and support rendered to the JCS, the NMCC, departments and executive agencies of the government allied embassies, and the United Nations Building in New York. The installation remains as a potential target for HOIS; however, there was no information reported to indicate the presence of any overt threat to the installation. The MI Group has been conducting a thorough review of the ICIP to determine the advisability of terminating the operation and implementing an overt direct support comprehensive counterintelligence program. In view of the above the continuation of an ICIP is not warranted at this time.

f. Recommendation: That the ICIP CENSUS TIME be terminated and an increased overt liaison with additional direct security support be provided the installation commander.

CONFIDENTIAL

ICIP REPORT

1 April 1975 to 31 March 1976

(C) CENTAVO KID: (OACSI Revalidation - 4 Feb 75)

a. Location: Harry Diamond Laboratories, (HDL), Adelphia, MD

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 - 31 Mar 76:

(1) Information was received that a First Secretary at the USSR Embassy, Washington, DC had visited HDL on two occasions. On one occasion he attended a meeting of the Institute of Electrical and Electronics Engineers, INC., a professional society for engineers which was held in the auditorium of HDL. The subject matter presented during the meeting was unclassified. At a second meeting of the society the Soviet Embassy official was denied entry. A report of the incidents were provided to the FBI and the Commander, HDL, made a determination that the society could no longer hold meetings at HDL in order to preclude any potential security threat.

(2) On two occasions an unidentified light aircraft flew over the test site, Woodbridge Research Facility (WRF), HDL, where a series of tests on foreign equipment under the Range Emory program was in progress. In both instances the aircraft circled over the Range Emory test site for about 5-7 minutes. The overflights are being investigated in coordination with the FBI.

(3) An employee, HDL, made allegations of immoral activities by members of the HDL Security Office and a group at the Van Ness Avenue Facility, HDL. The employee claimed that she was being followed by members of the HDL Security Office. After investigating the employee's story, the Commander, HDL, believed that she was suffering from psychiatric problems and would have her visit a psychiatrist for a complete evaluation.

(4) Suitability information concerning an employee of the Woodbridge Research Facility (WRF) a branch of HDL located in Woodbridge, VA, involved a problem of alcohol abuse. After counseling, the employee participated in a rehabilitation program.

643

ON SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

CONFIDENTIAL

(5) A courtesy penetration test of HDL's Adelphi Facility was conducted and revealed several security weaknesses which were corrected by the supported command. As a result of the test a number of security guards were transferred and guard procedures were changed. In addition a new magnetic coded badge was approved for purchase in FY 77. As a follow-up implementation of "Lessons Learned" in the penetration test the ICIP Project Liaison Officer (PLO) and the HDL Security Officer prepared and delivered a series of lectures and classes to the HDL guard force on the penetration test. Additionally, the PLO delivered lectures on the penetration test to the faculty and students of the Counterintelligence Dept, US Army Intelligence Corps School, Fort Huachuca, AZ.

d. Operational Status

(1) During the reporting period 880 manhours were expended, 18 information reports were submitted and 41 memorandums were prepared and provided to the supported commander.

(2) No TDY or b1 funds were expended.

e. Comments

(1) ICIP CENTAVO KID was approved by OACSI, DA, 18 Oct 73 and the supported commander was briefed on the implementation of the operation on 12 November 1973.

(2) The mission of the HDL includes critical sensitive research and development activities in support of the US Army. Some of the more sensitive activities include research into the hardening of communications equipment against nuclear weapons radiation; tests of nuclear warhead and missile systems to determine their ability to withstand nuclear weapons radiation; develop fuses for use with nuclear warheads and conducts development and testing of radiation hardened systems for Minutemen and Poseidon Missiles.

(3) The installation remains a potential target for HOIS and the hostile intelligence service have an interest in the research and development activities of the type conducted at HDL. However, the amount of significant information surfaced by the ICIP does not warrant the expenditure of manhours at this time to continue the ICIP.

(4) The MI Group is reviewing the ICIP with a view of terminating the program and instead implementing an overt direct support counterintelligence program.

f. Recommendation: That the ICIP CENTAVO KID be terminated and an overt direct support counterintelligence program be implemented.

644

CONFIDENTIAL

ICIP REPORT

1 April 1975 to 31 March 1976

(U) GONDOLA STAR: (OACSI Revalidation - 16 Jan 76)

a. Location: Aberdeen Proving Ground (APG) and Edgewood Arsenal (EA), Aberdeen, MD

b. Information Obtained Off-Post and/or Reported ob Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 to 31 Mar 76:

(1) Confidential and conventional sources employed in the operation surfaced information on adverse suitability pertaining to 13 employees at Aberdeen Proving Ground/Edgewood Arsenal. The suitability information included alcohol and drug abuse, moral improprieties, fraudulent claim on a TDY voucher and mental instability. Action was taken to substantiate or refute the reported allegations.

(2) Sources reported four instances of alien enlistees who were assigned to the sensitive installations. The Installation Intelligence Officer (IIO) was aware of the status of the four, that they did not have security clearances and had no access to classified information.

(3) Sources reported three instances of foreign travel during the period. One of these individuals who traveled to the USSR after attending a scientific conference in Finland is being exploited as a DOMEX lead. In another instance, a civilian employee visited Poland and Czechoslovakia for about one month in June-July 1975. The employee and his spouse allegedly visited relatives in both countries. The employee has been debriefed by USAINTA. Source reported that the employee plans to travel to these countries again in 1976. In another instance, husband and wife DOD employees took a Smithsonian Institution-sponsored tour to Moscow and Leningrad. The husband has been debriefed by USAINTA and the wife will be debriefed at her convenience. Source reported that the couple planned to take another trip to Russia in 1976.

(4) Sources reported several instances of foreign contact by military and DOD civilian personnel in the supported activity. In one instance a citizen of the Federal Republic of Germany was assigned on an exchange program to work until Sep 76. A report of a civilian DOD at Edgewood Arsenal with some unexplained periods of time in his background prompted a request for a Limited Investigation from the supported command.

645

(5) Sources reported two instances of Swedish citizens visiting the installations. It was determined that the one visit had been fully coordinated with the proper officials. In the second instance, it was determined that the visit had not been properly coordinated but that steps had been taken to insure the visitors would not be given access to classified information until guidance was provided by higher headquarters.

(6) Sources reported numerous instances of security weaknesses or poor security practices. These included unattended offices in which security containers were left open, a CONFIDENTIAL document left unsecured over a three day weekend, poorly controlled access to a classified scientific conference, movement of an office into a building in which no technical survey had been conducted prior to the move, typewriter ribbons and carbon papers not being disposed of as classified waste, and a high-ranking civilian employee bringing his eight year old son into a controlled access area where a classified test was being conducted and remaining overnight.

d. Operational Status:

(1) GONDOLA STAR was first approved by OACSI, DA for implementation on 21 May 1965. On 18 Feb 75, the ACSI directed the termination of 12 ICIPS, including GONDOLA STAR, by 31 Mar 75. After reviewing correspondence initiated by the Commander, Aberdeen Proving Ground, which recommended that the ICIP GONDOLA STAR be continued, the ACSI reinstated the operation for a period of six months on 11 Jul 75, subject to a review after the six months elapsed. On 16 Jan 76, the ACSI approved continuation of the ICIP as an ongoing operation. The following statistics are for the period 11 Jul 75 to 31 Mar 76:

(2) During the reporting period 2,223 manhours were expended and 84 written information reports and 16 oral reports were submitted. The operation cost $700 in ICF, no TDY funds were expended.

(3) At the end of the reporting period eight confidential sources were being used in the operation.

e. Comments: The ICIP has been a productive operation at a critically sensitive installation. Information obtained as a result of the ICIP and acted upon by the commanders concerned has served to strengthen the security of the installation. The 902d MI Group is conducting a comprehensive review of this operation for possible replacement of the operation by an overt counterintelligence support program.

f. Recommendation: Recommend that ICIP GONDOLA STAR be continued pending completion of the 902d MI Group review.

ICIP REPORT

1 April 1975 to 31 March 1976

(U) LENS HOLDER: (OACSI Revalidation - 4 Feb 75)

a. Location: White Sands Missile Range (WSMR), NM

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 to 31 Mar 76:

(1) Several reports from confidential sources during the period indicated that employees in the TRADOC Systems Analysis Activity (TRASANA) and the Army Missile Test and Evaluation Directorate (ARMTED) were following poor security practices in daily activities and not adhering to security regulations for safeguarding sensitive classified information. These security hazards included leaving security containers open and unattended for periods during the day, failing to complete security forms affixed to classified material containers, leaving classified material in work boxes after duty hours, and laxity on the part of security guards during night shifts. Security Officers of both TRASANA and ARMTED after being provided reports on these weaknesses briefed all their employees on requirements of WSMR Regulation 330-5 (Security Regulation) and reoriented all guard personnel on their security obligations.

(2) A confidential source reported that a US Army Officer assigned to the Office of Missile Electronics Warfare (OMEW) was misappropriating computer parts and electronic equipment which he was taking home to build his own computer. A summary of available information was provided the US Army Criminal Investigation Division Command for investigation by that agency. The same confidential source reported on 4 Feb 76 that two enlisted soldiers in sensitive positions in TRASANA were engaged in drug trafficking, but in separate operations. Local on-post investigation by the White Sands Missile Range Provost Marshal resulted in apprehension of one of the individuals. Information on the second soldier, allegedly involved in large-scale drug transactions and with criminal contacts, was reported to the Sixth Region, US Army Criminal Investigation Division Command for appropriate investigation.

(3) A confidential source reported that unknown persons had attempted on 11 Jan 76 to penetrate TRASANA, which is an Exclusion Area. On 12 Jan 76, the source reported an unidentified individual claiming to be a colonel had been permitted to enter the TRASANA Compound without the required identification. Investigations by the TRASANA security personnel disclosed that there was no substance to the 11 January report and the

REGRADED UNCLASSIFIED
ON SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

647

CONFIDENTIAL

person in the 12 January incident was identified and found to be a legitimate entrant into the facility. The incident did serve to illustrate the security awareness of the source and the personnel involved.

(4) A confidential source reported in March 1976 in three reports that devices, such as radios, tape recorders, and "pocket" digital calculators were being brought into a TRASANA Exclusion Area by personnel having access to the area. Many of the computers used in the area have classified information storage and the above-named devices allegedly can affect the computers' operations. The appropriate Security Officer has been appraised of these practices. ICIP project personnel have been tasked to provide follow-up reports on actions taken by the supported command. The information has also been provided as a matter of interest to the Counterintelligence Services and SAVE Team elements at USAINTA.

d. Operational Status:

(1) LENS HOLDER was first approved by the ACSI, DA, for implementation on 16 Sep 74.

(2) Two confidential sources provide coverage of the two principle supported activities, TRASANA and OMEW. An additional individual in the ARMTED is being assessed as a potential source.

(3) During the reporting period, 1,053 manhours were expended. The operation cost b1 there were no TDY outlays. The operation produced 36 written information reports and 24 memorandums and oral reports.

e. Comments:

(1) The mission of the White Sands Missile Range has remained unchanged since the inauguration of the ICIP and the previous OACSI revalidation on 4 Feb 75. The mission of WSMR is to evaluate the Safeguard Missile System missile vulnerability studies, missile control systems, and perform pre-production tests and analyses of missile systems. The mission of WSMR makes it a prime target of hostile intelligence. Activities at WSMR which have Priority I requirements for support are TRASANA, OMEW, ARMTED, the National Range Operations Directorate, and the US Army Safeguard Systems Evaluation Agency. These elements develop electronic countermeasures techniques to nullify vulnerabilities discovered in missile systems, conduct pre-production tests of rocket and guided missile systems, operate a nuclear effects facility and operate National Range Facilities for tests conducted at WSMR.

CONFIDENTIAL

Page 2143 of 3957

(2) The operation to date has proven to have value as an adjunct to the installation security program. The isolation of the installation, disperson of many of its facilities, and the extent and nature of its computer facilities and missile testing ranges present a lucrative target for hostile intelligence service (HoIS) penetration. USMR's proximity to the US-Mexican border renders it vulnerable to HoIS operations based in a foreign country. Admittedly, the operation to date has not surfaced hard evidence of HoIS presence or penetration, but the scope of the threat must be recognized. Details of activities conducted at the site are of current interest to HoIS. The two-pronged capability of the ICIP, that is, extensive use of overt sources of all types, plus the covert effort exemplified by the confidential sources, appears to be a necessary coverage at this time with the best potential for detection and discovery of HoIS activities.

f. Recommendation: Based on the above, recommend that ICIP LENS HOLDER be continued.

ICIP REPORT

1 April 1975 to 31 March 1976

(C) LENTIL MONKEY: (OACSI Revalidation - 4 Feb 75)

a. Location: Defense Language Institute (DLI), Presidio of Monterey, CA

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 to 31 Mar 76:

(1) A source in the Chinese-Mandarin Language Department furnished information concerning a temporary instructor of that department who closely questioned her students about their knowledge of their future duties and assignments. She frequently expressed her displeasure in the task of teaching Chinese to students which would enable them to "conduct spying activities" directed at the People's Republic of China (PRC). The instructor also displayed a rebellious and uncooperative attitude toward necessary DLI administrative requirements. Born in Canton, China, she was a British citizen and no evidence of a pre-employment investigation could be found. DLI refused to renew her contract when it expired in Sep 75 and she departed DLI in that month.

(2) A Confidential Source reported information on an instructor of the German Language Department who travelled to East Germany in mid-1975 without notification or permission from DLI authorities. Upon completion of the travel, the instructor was admonished officially and informed that any future violation of the DLI regulations on foreign travel would result in temporary suspension.

(3) A visitor to the Russian Language Department in May 75 requested copies of training material used in the Russian Dept, claiming that he wanted it to use for language training in his reserve unit. The visitor was given two unclassified training exercises. Subsequent investigation identified the visitor and established that he was a former graduate of Russian at DLI, and additionally, that he was a bona fide member of a California-based Army Reserve unit. The incident, although not of a major significance as proven by the later investigation, did serve to underscore a need for better visitor control at DLI. The Director, DLI, placed special emphasis on this and the need for all personnel to be alert for unauthorized visitors and proper procedures for handling them. New visitor requirements and restrictions were published and distributed throughout DLI.

~~SECRET~~

(4) An instructor in the Hungarian Language Department travelled to Hungary in Sep 75 with a stated purpose of visiting relatives. A review of the instructor's file revealed extensive foreign travel in Europe since 1971 and frequent contact with relatives and other persons in Hungary. File checks and inquiries of other agencies failed to reveal any substantial derogatory information concerning the instructor, but the potential hostage situation is evident in the continuing contacts. Monitoring of the instructor's activities continues.

(5) An ICIP source reported that an instructor in the Russian Language Department allegedly is a former member of the Soviet Army's equivalent to the US Army Security Agency who while in the Soviet Army received special training in English. This instructor left the USSR in Apr 74 and was hired at DLI in Oct 74. A coworker of the instructor left the Soviet Union in Apr 75 and was also hired as an instructor at DLI in Jul 75. Both of the instructors taught together at the Leningrad Herzen Pedagogical Institute in Leningrad in the late 1960s and early 1970s. The sequence of these events illustrate how quickly these individuals are able to secure employment after leaving the USSR, employment in which they are placed in extremely close contact with US intelligence personnel. Monitoring of the activities of these individuals continues.

(6) Two instructors in the Bulgarian Language Department who are man and wife were accused by fellow faculty members at DLI of being communists because of the unexplained details of their emigration to the West and the manner in which they left Bulgaria. The allegations led to charges and countercharges; full details of the incident were provided the FBI. The wife remains at DLI as an instructor, but as of the close of the reporting period on 31 Mar 76, the husband was employed elsewhere and no longer DOD-affiliated.

(7) A DLI employee of the Hebrew Project at DLI also created considerable internal dissension and bickering within the Hebrew Department when he maintained close contact with the Israeli Consulate in San Francisco. This caused associates to become suspicious of his motives and high level contacts. The employee, an alien with an impressive background, including possible intelligence activities, later applied for employment with the National Security Agency (NSA), which has been provided all information available to USAINTA.

(8) A confidential source reported that a Czechoslovakian Language Department (CLD) instructor was planning to withdraw her retirement fund money and return to Czechoslovakia with her two sons, allegedly to live there.

b1 Per FBI

Auth Para 6-601 DOD 5200.1R

~~SECRET~~

b1 Referred

At the close of the reporting period possible health problems appeared as a deterrent to the wife's original plans, but definite decisions in this regard are unknown.

b1 Per FBI

(9) A second CLD instructor has disclosed to several sources over the last two years his continuing efforts to obtain the release of his children from Czechoslovakia. The Czech Government recently informed the instructor that he could obtain the release of his children if he pays the Czech Government $66,000 as reimbursement for the cost of the time the instructor spent in a Czech prison and an education tax on the education acquired in Czechoslovakia by the instructor and his wife. The instructor disclosed that the Czech military had changed its method of counting. The reports indicate that the instructor is maintaining close, continuing ties with Czech Government officials and that a hostage situation with his children exists. Monitoring of his activities continues.

(10) Monitoring also continues on activities of a Polish Language Department (PLD) instructor who plans to visit his mother and a brother in Warsaw in mid-1976. The instructor has not applied formally to DLI for approval for the leave and the trip. The instructor frequently has travelled in the past to Europe. His brother, a medical doctor also travels extensively, and has been in the US and Canada often during the last 20 years. During a 1974 visit to the US, the instructor's brother visited DLI, attended PLD functions at DLI, talked with the US Army students at length and photographed many of the students in attendance. US Customs once detained the instructor's brother at the Canadian border for attempting to smuggle Communist propaganda into the US; US Customs confiscated the propaganda.

(11) An instructor in the Russian Language Department apparently is suffering from mental problems. The instructor has written to a California US Senator, a nationally syndicated columnist, and the FBI, alleging that he is constantly under surveillance by the Soviet KGB and US intelligence and further, that his life is in danger. The instructor also has sent a telegram to the President of the United States. Both the FBI and the Secret Service have made inquiries into the matter and conducted local investigations of the instructor. On 23 Mar 76, the DLI Commandant directed the instructor to undergo psychiatric evaluation. Initially, the instructor refused and was suspended from his duties administratively. At the end of the reporting period the instructor agreed to the examination. The results and final disposition are pending.

Regraded ~~SECRET~~
ON 20 MAR 1998
By CDR USAINSCOM FOI/PO
Auth Para 6-601 DOD 5200.1R

652

~~SECRET~~

d. Operational Status:

(1) LENTIL MONKEY was first approved by ACSI, DA, for implementation on 11 September 1967.

(2) During the reporting period, 4,603 manhours were expended. b1 there were no TDY outlays.

(3) Production consisted of 360 written information reports and 220 Memorandums and oral reports.

(4) Eight confidential sources were active in the ICIP at the close of the period and additional coverage of language departments and administrative sections of DLI was obtained by 16 conventional sources.

e. Comments:

(1) The mission of DLI is to train DOD intelligence and communications security specialists in every major foreign language. Military attaches, employees of the CIA and FBI, as well as other federal agencies, are also trained at DLI, making it an extremely enticing target for hostile intelligence service operatives. The majority of the faculty of DLI have foreign backgrounds, some have only recently arrived from Communist Bloc countries and rapidly achieved employment in an installation where most of the students are in intelligence or destined for intelligence assignments upon graduation. Many of these instructors are in hostage situations by virtue of close, living relatives in the ComBloc countries with whom they maintain written contact and closer, if less frequent, personal contact. In maintaining contact with these ComBloc countries for any reason whatsoever, intelligence agencies of those countries in all likelihood have identified the instructors' place of employment and may have contacted them under one guise or another.

(2) In addition to extensive and frequent contacts with the governments of HoIS, many instructors who probably are completely imbued with the American way of life and are now US citizens or who intend to become citizens, nevertheless are vulnerable targets. The instructors acquire personal acquaintances among many intelligence personnel and, in the course of teaching and associating with the military in year-long classes, learn of the students' future assignments and do in some instances correspond with DLI alumnae after graduation. This unique characteristic of conditions at DLI serves to make the Institute an even more attractive target for HoIS approaches.

(3) As shown by statistics in paragraph d(2), and d(3), above, ICIP LENTIL MONKEY is the most productive of all the presently active ICIPS with a total of 360 written reports. Though 4,603 manhours were expended in the project, the actual cash outlay of ICF was $372 for the

year, the lowest cost figure for any of the active ICIPS. Viewed from the cost-yield ratio alone, this operation is an extremely successful, economical effort.

f. Recommendation: In view of the above recommend that ICIP LENTIL MONKEY be retained.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 2 June 1976

ACTION REQUIRED:

To obtain formal ACSI approval for termination of three ICIP operations.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) Background:

-- Contained in USAINTA's 3d Quarter, FY 1976, ICIP Operations Report, 11 May 76, was recommendation to terminate three operations: CANINE PLATE (U) at Seneca Army Depot; CENSUS TIME (U) at Pentagon Telecommunications Center and CENTAVO KID (U) at Harry Diamond Laboratories.

-- USAINTA recommendation based on 902d MI Group review of ICIP's to determine advisability to terminate these ICIP's and replace them by an overt direct support comprehensive CI program.

2. (U) Discussion:

-- After a thorough review of the ICIP report on these operations, it is determined that they can be terminated with no adverse affect on the installations served. Installations concurred.

-- Increased overt liaison with additional security support will be provided the installations by the 902d MI Group. 902d MI Gp Pamphlet No. 381-3, dated 22 Apr 76, outlines the Direct Support Comprehensive Counterintelligence Program (DSCCP) (TAB C) outlines overt liaison procedures without employing confidential sources.

-- ICIP Reports on CANINE PLATE (U), CENSUS TIME (U) and CENTAVO KID (U) are attached at TAB B.

-- With the termination of these ICIP's, there remains four active CONUS ICIP operations.

-- Ltr to USAINTA at TAB A, furnishes formal termination of these ICIP's and instructs USAINTA to conduct review of the remaining four ICIP's to determine need for continuance, and to forward results and recommendations to this office NLT 21 June 1976.

ICIP REPORT

1 April 1975 to 31 March 1976

(c) CANINE PLATE: (OACSI Revalidation - 4 Feb 75)

a. Location: Seneca Army Depot (SAD), Romulus, NY.

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 to 31 Mar 76: There was no significant information obtained during the period and there were no indications of any overt threat to the installation.

d. Operational Status: CANINE PLATE was first approved by OACSI, DA, for implementation on 18 Sep 73. During the reporting period 400 manhours were expended in the ICIP. However, there were no reports submitted, no funds expended, neither TDY nor b1 There were no confidential sources utilized, only conventional sources.

e. Comments: The installation's mission remains the same, a supply depot for missile and artillery weapons systems with a nuclear capability. The Depot is considered a critical and sensitive installation; therefore, remains as a potential target for HOIS. However, there was no information reported to indicate the presence of any overt threat to the installation. The MI Group has been conducting a thorough review of the ICIP to determine the advisability of terminating the operation.

f. Recommendation: That the ICIP CANINE PLATE be terminated but that increased overt liaison with additional security support be provided the installation commander.

659

ICIP REPORT

1 April 1975 to 31 March 1976

(C) CENSUS TIME: (OACSI Revalidation - 4 Feb 75)

a. Location: Pentagon Telecommunications Center (PTC), US Army Communications Command (USACC), The Pentagon, Washington, DC.

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During the Period 1 April 1975 to 31 March 1976:

(1) An ICIP source reported that a PTC civilian employee was transferred from the coding and decoding section because he had coded an obscene message that was to be sent to an overseas user. Additionally, the ICIP source provided information concerning possible security violations involving the employee. Because of the employee's questionable suitability characteristics and conduct he was assigned to a job in PTC requiring minimum contact with classified information. Supervisors will continue to monitor his conduct and activities.

(2) An Army NCO assigned to PTC attempted to commit suicide by slashing his wrists. As a result of the information gained concerning the suicide attempt a Limited Investigation was initiated. The NCO was assigned to the Logistics Branch, PTC, pending results of the investigation. The investigation revealed that the NCO has a large number of outstanding debts, has lied on loan applications, and had ordered a 1976 automobile which cost in excess of five thousand dollars. Interviews concerning the NCO revealed alleged drug usage and homosexuality. The Limited Investigation was completed and referred to PTC for adjudication. The decision was made not to revoke the NCO's security clearance since he left the service on 9 April 1976 and will not be allowed to re-enlist.

(3) Adverse suitability information was reported on two additional NCOs assigned to PTC. Based on medical reports and rebellious attitudes one NCO was released from the Army by board action. The second NCO after a night of heavy drinking began hitting his wife when she tried to arouse him after he had "passed out." The wife filed assault charges with the Military Police but withdrew them later. The PTC commander counselled the NCO on his drinking and marital problems and assigned him duties where he has no access to classified information.

(4) During the course of an investigation of an enlisted WAC member of PTC who was away-without-leave (KAWOL Investigation), it was discovered that the CID was also investigating her for theft and trafficking in drugs. The MI representative and CID agents coordinated their mutual investigations. PTC has suspended the WAC's access to classified material pending completion of the investigation.

d. Operational Status:

(1) CENSUS TIME was first approved by OACSI, DA, for implementation on 5 Feb 74.

(2) During the period of 1 April 1975 to 31 March 1976, 726 manhours were expended, no TDY nor b1 were used. The operation produced seven information reports. One confidential source was used during the period but was terminated during the latter part of the period.

e. Comments: The PTC operations include an extremely high volume of multimedia ultra sensitive compartmented classified traffic processed at the highest level of the military establishment command group being served, and includes the cryptographic operation, maintenance and logistical mission and support rendered to the JCS, the NMCC, departments and executive agencies of the government allied embassies, and the United Nations Building in New York. The installation remains as a potential target for HOIS; however, there was no information reported to indicate the presence of any overt threat to the installation. The MI Group has been conducting a thorough review of the ICIP to determine the advisability of terminating the operation and implementing an overt direct support comprehensive counterintelligence program. In view of the above the continuation of an ICIP is not warranted at this time.

f. Recommendation: That the ICIP CENSUS TIME be terminated and an increased overt liaison with additional direct security support be provided the installation commander.

ICIP REPORT

1 April 1975 to 31 March 1976

(C) CENTAVO KID: (OACSI Revalidation - 4 Feb 75)

a. Location: Harry Diamond Laboratories, (HDL), Adelphia, MD

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 - 31 Mar 76:

(1) Information was received that a First Secretary at the USSR Embassy, Washington, DC had visited HDL on two occasions. On one occasion he attended a meeting of the Institute of Electrical and Electronics Engineers, INC., a professional society for engineers which was held in the auditorium of HDL. The subject matter presented during the meeting was unclassified. At a second meeting of the society the Soviet Embassy official was denied entry. A report of the incidents were provided to the FBI and the Commander, HDL, made a determination that the society could no longer hold meetings at HDL in order to preclude any potential security threat.

(2) On two occasions an unidentified light aircraft flew over the test site, Woodbridge Research Facility (WRF), HDL, where a series of tests on foreign equipment under the Range Emory program was in progress. In both instances the aircraft circled over the Range Emory test cite for about 5-7 minutes. The overflights are being investigated in coordination with the FBI.

(3) An employee, HDL, made allegations of immoral activities by members of the HDL Security Office and a group at the Van Ness Avenue Facility, HDL. The employee claimed that she was being followed by members of the HDL Security Office. After investigating the employee's story, the Commander, HDL, believed that she was suffering from psychiatric problems and would have her visit a psychiatrist for a complete evaluation.

(4) Suitability information concerning an employee of the Woodbridge Research Facility (WRF) a branch of HDL located in Woodbridge, VA, involved a problem of alcohol abuse. After counseling, the employee participated in a rehabilitation program.

DECLASSIFIED UNCLASSIFIED
SEP 05 1997
BY CDR USAINSCOM FOI/PO
Auth Para 1-603 DoD 5200.1

(5) A courtesy penetration test of HDL's Adelphi Facility was conducted and revealed several security weaknesses which were corrected by the supported command. As a result of the test a number of security guards were transferred and guard procedures were changed. In addition a new magnetic coded badge was approved for purchase in FY 77. As a follow-up implementation of "Lessons Learned" in the penetration test the ICIP Project Liaison Officer (PLO) and the HDL Security Officer prepared and delivered a series of lectures and classes to the HDL guard force on the penetration test. Additionally, the PLO delivered lectures on the penetration test to the faculty and students of the Counterintelligence Dept, US Army Intelligence Corps School, Fort Huachuca, AZ.

d. Operational Status

(1) During the reporting period 880 manhours were expended, 18 information reports were submitted and 41 memorandums were prepared and provided to the supported commander.

(2) No TDY or b1 were expended.

e. Comments

(1) ICIP CENTAVO KID was approved by OACSI, DA, 18 Oct 73 and the supported commander was briefed on the implementation of the operation on 12 November 1973.

(2) The mission of the HDL includes critical sensitive research and development activities in support of the US Army. Some of the more sensitive activities include research into the hardening of communications equipment against nuclear weapons radiation; tests of nuclear warhead and missile systems to determine their ability to withstand nuclear weapons radiation; develop fuses for use with nuclear warheads and conducts development and testing of radiation hardened systems for Minutemen and Poseidon Missiles.

(3) The installation remains a potential target for HOIS and the hostile intelligence service have an interest in the research and development activities of the type conducted at HDL. However, the amount of significant information surfaced by the ICIP does not warrant the expenditure of manhours at this time to continue the ICIP.

(4) The MI Group is reviewing the ICIP with a view of terminating the program and instead implementing an overt direct support counterintelligence program.

f. Recommendation: That the ICIP CENTAVO KID be terminated and an overt direct support counterintelligence program be implemented.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 2 June 1976

ACTION REQUIRED

To obtain formal ACSI approval for termination of three ICIP operations.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) Background:

-- Contained in USAINTA's 3d Quarter, FY 1976, ICIP Operations Report, 11 May 76, was recommendation to terminate three operations: CANINE PLATE (U) at Seneca Army Depot; CENSUS TIME (U) at Pentagon Telecommunications Center and CENTAVO KID (U) at Harry Diamond Laboratories.

-- USAINTA recommendation based on 902d MI Group review of ICIP's to determine advisability to terminate these ICIP's and replace them by an overt direct support comprehensive CI program.

2. (U) Discussion:

-- After a thorough review of the ICIP report on these operations, it is determined that they can be terminated with no adverse affect on the installations served. Installations concurred.

-- Increased overt liaison with additional security support will be provided the installations by the 902d MI Group. 902d MI Gp Pamphlet No. 381-3, dated 22 Apr 76, outlines the Direct Support Comprehensive Counterintelligence Program (DSCCP) (TAB C) outlines overt liaison procedures without employing confidential sources.

-- ICIP Reports on CANINE PLATE (U), CENSUS TIME (U) and CENTAVO KID (U) are attached at TAB B.

-- With the termination of these ICIP's, there remains four active CONUS ICIP operations.

-- Ltr to USAINTA at TAB A, furnishes formal termination of these ICIP's and instructs USAINTA to conduct review of the remaining four ICIP's to determine need for continuance, and to forward results and recommendations to this office NLT 21 June 1976.

ICIP REPORT

1 April 1975 to 31 March 1976

(C) CANINE PLATE: (OACSI Revalidation - 4 Feb 75)

a. Location: Seneca Army Depot (SAD), Romulus, NY.

b. Information Obtained Off-Post and/or Reported on Non-Affiliated Civilians: None

c. Significant Information Obtained During Period 1 Apr 75 to 31 Mar 76: There was no significant information obtained during the period and there were no indications of any overt threat to the installation.

d. Operational Status: CANINE PLATE was first approved by OACSI, DA, for implementation on 18 Sep 73. During the reporting period 400 manhours were expended in the ICIP. However, there were no reports submitted, no funds expended, neither TDY nor b1 There were no confidential sources utilized, only conventional sources.

e. Comments: The installation's mission remains the same, a supply depot for missile and artillery weapons systems with a nuclear capability. The Depot is considered a critical and sensitive installation; therefore, remains as a potential target for HOIS. However, there was no information reported to indicate the presence of any overt threat to the installation. The MI Group has been conducting a thorough review of the ICIP to determine the advisability of terminating the operation.

f. Recommendation: That the ICIP CANINE PLATE be terminated but that increased overt liaison with additional security support be provided the installation commander.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 21 May 76

ACTION REQUIRED: To obtain approval/disapproval to USAREUR ICIP OPLAN on USASA Field Station Berlin (USASAFSB) (C)

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (C) Background:

-- Since 1970, Project FILMAN has provided support to USASA Field Station Berlin (USASAFSB). FILMAN was designed to use sources from the local work force and personnel located in establishments frequented by the work force. Problems encountered from peripheral nature of sources and their difficulty in becoming accepted into USASA circles. See TAB B.

-- Cdr, 766th MID proposed an Aggressive Defensive Source Acquisition Program (ADSAP) support arrangement for USASAFSB which would provide more direct source access and control of source coverage.

-- In August 1975, Cdr USASAFSB and DCSSEC, HQ USASA concurred in proposal. In September 1975, ACSI, DA and DCSI, USAREUR briefed and supported concept. In October 1975, Cdr, USASA concurred in cancellation of FILMAN and initiation of ADSAP. (See TAB C) Subsequently, concept discarded in favor of subject ICIP.

-- By ltr 28 April 1976, DCSI, USAREUR forwarded subject ICIP for ACSI approval.

2. (U) Discussion:

-- Purpose of subject ICIP is to collect significant CI information through use of overt liaison contacts, casual sources and confidential recruited sources assigned to USASAFSB. Sources will be specifically targeted against Hostile Intelligence Services (HOIS) activities directed toward USASA and against security vulnerabilities of USASA personnel.

-- On 14 May 1976, DCSSEC, HQ USASA, reviewed subject ICIP and concurred in OPLAN. The DCSSEC recommended deletion of coordination with Cdr, USASA Europe (Para 2b(4)(c), "in view of realignment of functions and need for compartmentation, coordination reflected in para 4e(2) is sufficient." (TAB A)

19 SEP 1975

AEUMI-BCK

SUBJECT: Project Filman (U)

Commander
USASAFSB
ATTN: S-2
APO 09742

1. (U) The purpose of this proposed action is to provide increased and improved counterintelligence support to the US Army Security Agency Field Station, Berlin (USASAFSB).

2. (U) In 1970, a CI operations plan was submitted by Berlin Field Station, 66th MI Group, to correspond with the activation of the USASAFSB site known as "Teufelsberg". The operations plan was ~~designed to provide counterintelligence support to the project through the utilization of sources, either among the local work force or through personnel located in establishments frequented by the work force. Because the local work force was too transient in nature to effectively insert a source before they completed work on site, source recruitment efforts were concentrated on individuals who associated with ASA personnel at local entertainment establishments and at social functions.~~ Initially through coordination with the S-2, USASAFSB, a list of establishments frequented by USASAFSB personnel was prepared and attempts were made to introduce sources into some of the establishments. We presently have ~~six sources under the Filman project who have provided limited information.~~ However, to date these sources have provided routine ~~information of low level CI significance, primarily of interest to US Army Berlin Brigade and not to USASAFSB. In approximately 1973, USASA withdrew financial support of Filman and fiscal responsibility reverted to the 66th MI Group. The primary difficulty with the Filman project has been the peripheral nature of the sources and their difficulty in becoming accepted into ASA circles, since ASA personnel appear to associate in fairly close knit ASA circles. In short, peripheral sources have provided only peripheral leads.~~

DECLASSIFIED AUTHORITY

~~CONFIDENTIAL~~

19 SEP 1975

AEUMI-BCE
SUBJECT: Project Filman (U)

3. (U) I ~~propose~~ that the ~~Filman project be cancelled~~, that permission be granted to recruit ASA personnel within USASAFSB, and ~~that the Aggressive Defensive Source Acquisition Program (ADSAP) be used as the vehicle to provide defensive counterespionage support to USASAFSB.~~ A brief description of ADSAP and general ADSAP EEI is attached as Inclosure. This would enhance CI coverage of USASAFSB by providing more flexibility within the framework of one source program, access to the target areas and target personalities, a wider range of operations for sources, and more streamlined administrative procedures for the management of sources. Current Filman sources will be converted to the ADSAP program. Sources will be preferably recruited within the target activity to provide information on personalities and activities. Additional sources will be recruited on the periphery or outside of the target sites in order to enhance overall CI coverage. Once it has been determined where a possible shortfall of information occurs, a concerted effort will be made to obtain sources who can provide that information. Indiscriminant selection and recruitment of sources will be avoided and emphasis will be placed on a prospective source's ability to fulfill the requirements levied on him. 766th MID will provide the S-2, USASAFSB with the desired qualifications for personnel to be utilized in the program and he will be requested to screen present personnel assigned to his unit to determine those best qualified for recruitment. ADSAP will not supplant the S-2, USASAFSB program of internal informants, but will augment his present activities. A target analysis will be prepared by this Detachment in coordination with the S-2, USASAFSB. ~~Information solely of a suitability nature, will be reported directly to the S-2, USASAFSB.~~ All other information will be reported in accordance with reporting requirements, as outlined in LOI 6-TD, 66th MI Group.

4. (U) Preliminary discussions, conducted in August 1975, with the Commander, USASAFSB, the Deputy Chief of Staff, Security, USASA Headquarters, Arlington Hall, Virginia, and the Commander, 66th MI Group, indicated a favorable response to the above proposal.

5. (U) This Detachment requests your comments, recommendations, and approval of the above proposal.

~~CONFIDENTIAL~~

AGGRESSIVE DEFENSIVE SOURCE ACQUISITION PROGRAM (ADSAP)

ADSAP concerns itself with two categories of human sources as defined by 66th MI Group LOI Number 6-TD. These two source categories are Conventional and Confidential. The ADSAP is a CI threat information collection program and sources recruited under this program should not be recruited for coverage of a specific CE target. Sources are recruited within and on the periphery of sensitive installations and activities by combining both active and passive measures to counter the information collection capability of hostile intelligence services (HoIS) operating against US Forces. The passive measures are designed to protect defense information from unauthorized disclosure or compromise, while the aggressive measures are designed to obtain information which will lead to the detection and neutralization of HoIS efforts directed against US Forces.

General ADSAP EEI:

a. Detection of suspicious activities, undue inquisitiveness or obvious lack of good security practices on the part of or involving US Forces personnel.

b. Identification of US Forces personnel who closely and continually associate with foreign nationals having connections with Soviet Bloc countries.

c. Identification of US forces personnel who make unauthorized or frequent authorized travel to Soviet Bloc countries.

d. Identification of US Forces personnel who have continued contact with local national personnel.

e. Detection of disaffected personnel.

f. Identification of US Forces personnel whose activities and/or character weaknesses either individually or in a combination constitute a clear and significant threat to US Forces in that they have rendered the US Forces connected personnel susceptible to exploitation by HoIS. Susceptibility to HoIS exploitation because of adverse suitability factors should be coupled with at least one of the foregoing indicators of possible HoIS interest. Specific suitability factors which could render US Forces personnel vulnerable to HoIS exploitation would be excessive indebtedness or recurring financial difficulties; unexplained affluence; conduct such as criminal, immoral or homosexual acts which could render

SUBJECT: Aggressive Defensive Source Acquisition Program (ADSAP) (U)

Commander
US Army Security Agency
ATTN: DCSSEC
Arlington Hall Station
Arlington, Virginia 22212

1. (C) Attached is a copy of a letter received on 19 September 1975 from Commander, 766th Military Intelligence Detachment, 66th MI Group, entitled "Project FILMAN". The letter is self explanatory but can be summarized as follows: Counterintelligence support to USASAFS Berlin has been conducted since 1970 under the provisions of FILMAN. Although FILMAN was satisfactory in concept, it suffered from a lack of precise support definition, particularly in source acquisition and reporting.

2. (C) Cdr, 766th MID, proposes an ADSAP support arrangement which would provide more direct source access to USASA personnel and direct control of source coverage of actual or potential espionage approaches. Cdr, USASAFS Berlin concurs in the concept and desires to implement the program. COL Holden was briefed on the program during his visit to Berlin in August 1975 and concurred in the proposal. MG Aaron, DA ACSI, and MG Dillard, USAREUR DCSI, were also briefed in September 1975 and supported the concept.

3. (C) Request your concurrence in cancellation of Project FILMAN and adoption of the ADSAP by USASAFS Berlin/766th MID. Appropriate safeguards will be maintained with regard to withdrawal of USASA sources should hostile intelligence interest focus on a USASA soldier. Request a reply as soon as possible so we can begin negotiating a new Memorandum of Understanding with 66th MI Group.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 21 May 1976

ACTION REQUIRED

To obtain approval/disapproval to terminate ODCSI, USAREUR ICIP CARELESS TOKEN (U).

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1 (U) Background:

-- ICIP CARELESS TOKEN approved by ACSI on 25 Feb 76.

-- ICIP designed to detect and counter vulnerability to espionage by USASA personnel assigned to Det N, USASA Field Station, Augsburg, (USASAFSA) FRG.

2 (U) Discussion:

-- On 5 April 76, CDR 511th MI Bn recommended that ICIP be terminated. On 9 Apr 76, ODCSI, USAREUR, and on 14 May 76 DCSSEC HQUSASA concurred in recommendation to terminate.

-- Rationale for termination:

o Drawdown of USASA Det. Only seven USASA personnel now assigned to station.

o Drawdown precludes further expenditure of CI assets and efforts required by CARELESS TOKEN.

o NCOIC Det N appears completely competent to accomplish duties and control subordinates.

o Regular contact between PLO and NCOIC, and occasional casual contact between PLO and USASA Det N personnel on an opportunity basis can accomplish goals of this ICIP. Pertinent info derived from such contacts would be reported promptly to S2, USASAFS Augsburg.

-- 3d Ind (Red TAB A) informs ODCSI, USAREUR that ACSI, DA approves termination of CARELESS TOKEN.

2. (U) This Quarterly Status Report is submitted in accordance with the above references and covers the period 16 January - 1 April 1976. A one-time adjustment in reporting dates has been made to allow the reporting period to coincide with each calendar quarter.

3. General:

a. Company B, Forward Operations Battalion, terminated its operational mission at 2400 hours, 7 February 1976. During the period following, Company B personnel were engaged in transporting the classified operational files and equipment from the site to Augsburg. All Company B assigned or attached personnel have departed the target area. Destruction of all but two of the former Company B operations buildings is underway and is being performed by Facilities Engineers (FE) personnel from Regensburg and Grafenwoehr. Both of the two remaining buildings are to be removed under the Regensburg FE supervision under the same contract that will provide for landscaping the northern end of the compound, and removal of the rock at the northwestern end that presently blocks a portion of the antenna scanning area. The dismounted communications vans were not sold at the site as previously

AEUMI-N-CE 5 April 1976

SUBJECT: CARELESS TOKEN (U)

reported would be the case, but instead have been removed to the Property Disposal Facility at Nuernberg for disposition.

b. Two members of Company B applied for European separations since November 1975, but it was not determined whether or not the applications had been approved, since both personnel had been transferred to Augsburg. SP5 b6 MOS: 98G2LRU, DPOB: b6 in b6 was scheduled for discharge on 20 May 1976. She had a US fee passport b6 issued 15 November 1973 in Boston, MA, and indicated her intent to remain in Europe for a 12 month period for travel purposes. SP5 b6 MOS: 98G2LRU, DPOB: b6 in b6 was scheduled for discharge on 9 January 1976, but extended his enlistment until 10 November 1976. He had a US fee passport b6 issued 6 July 1973 at New Orleans, LA, and indicated his intent to remain in Germany for 12 months to study. Both b6 and b6 were unmarried.

c. On 10 February 1976, CW2 b6 USASAFS Augsburg (USASAFSA) arrived on TDY at the target area accompanied by one or two other personnel from the same station. b6 is the Communications Security Custodian for USASAFSA and he supervised the removal of cryptographic communications equipment and escorted it back to USASAFSA. He stayed at the Kolmerhof Hotel in Rimbach, opposite the Company B administrative area. On 12 February 1976 he departed Rimbach and returned to Augsburg. On 12 February, the manager of the Kolmerhof Hotel contacted Company B to advise that an American guest had entered a room at the hotel on the night of 11-12 February. The guest was apparently extremely intoxicated, had become ill, and had vomited in large amounts all over the room, causing damage to carpets, furniture and bedding; evidence also indicated that the guest had urinated on the floor of the room. The manager presented a bill for DM 100 (approximately $40.00) and asked that it be passed on to the guest. The guest was determined to have been b6 and he readily admitted having caused the damage and subsequently paid the bill.

d. Additional information concerning the physical plant at the target was obtained as follows:

(1) Sewage service is provided by the firm Franz Lederer, St Sebastian Platz 1, Brueck (UQ0458). Water service is provided by the firm Hans Lober, Rauschstrasse, Nuernberg vorm Wald (UQ1069). The water is delivered by truck. The Comptroller Office, Seventh Army Training Center (SATC), Grafenwoehr advised that funds had been allotted to connect the target to the sewer and water systems of the adjacent French/Bundeswehr compound. The construction of those lines will be completed by July 1976 and will replace the septic and holding tanks now in use. Agency checks are being conducted on the above-mentioned firms.

690

[redacted]

~~CONFIDENTIAL~~

AEUMI-N-CE
SUBJECT: CARELESS TOKEN (U)

5 April 1976

(2) OBAG (the Upper Bavaria Power Company) has declared the main power cable serving the target, the French/Bundeswehr compound and the nearby Bundespost (German postal system) TV relay tower to be inadequate. OBAG intends to lay a new power cable parallel to the present one, and has asked each using agency to contribute to the costs, on a pro-rata basis. As the situation now stands, loss of outside power would automatically put the LfV generator into operation. That generator is capable of supplying full electric power to both the operational and living areas of the target for a maximum of 206 hours. After that time, the generator must be shut down for refueling, oil and maintenance.

(3) The SATC Military Community Fire Marshal recently inspected the target and indicated that some water must be made available for emergency fire use. The Neukirchen-Heilig Blut (UQ5258) Volunteer Fire Department indicated it had a 40-minute reaction time. The projected hookup to the French/Bundeswehr compound water system should make sufficient water available.

e. Due to the staggered schedules of target personnel, they had decided against hiring a cook and will prepare their own meals as a community effort. Inquiries at the local Labor Office revealed an estimated monthly salary for a cook would amount to about DM 1300 and this had a major impact on their decision.

4. (U) Operational Matters:

a. Information provided in the previous Quarterly Status Report is corrected/clarified as follows: There will be no SI area at the target. The highest access/classification will be Secret/Crypto. A request for a technical inspection had been submitted through ASA channels several months previously, which was not known by target personnel. The entire area, including the common room, will be subjected to a technical inspection prior to 21 May 1976.

b. Reference paragraph 4c of reference c: b6 closed the Hoherbogen Restaurant in late February 1976 and moved to the Augsburg area. Since his departure, the restaurant has remained closed. The entire file concerning b6 will be prepared for transfer to Special Operations Detachment, 66th Military Intelligence Group for monitoring of b6 activities in the Augsburg area.

REGRADED UNCLASSIFIED ON SEP -5 1997 BY CDR USAINSCOM FOI/PO AUTH PARA 1-603 DoD 5200.1-R

691

~~CONFIDENTIAL~~

AEUMI-N-CE
SUBJECT: CARELESS TOKEN (U)

5 April 1976

c. b6, owner of "Tina's Bar" in Furth-im-Wald (UQ4364), also intended to move to Augsburg. b6 reportedly was a girl friend of several of the Company B senior enlisted personnel. b6 claimed to have enough money to purchase or lease any type of establishment in the Augsburg area that she chose. Agency checks will be conducted concerning b6 and the information will be passed to Special Operations Detachment if she moves to Augsburg.

d. Target members have the following privately-owned vehicles:

License Number	Type	Owner
KS-8739	1975 Chev van	b6
JA-9692	1964 VW sedan	
KH-8553	1970 Opel	
JT-8306	1967 Mercedes	

Additionally, SP5 Pack owns two motorcycles, neither of which is registered at the present time. He intends to register one of them and to store the other for shipment to CONUS when he is discharged in August 1976. SP4 b6 is buying a car from one of the civilian contractors in Augsburg and will pick it up soon.

e. Target members have had contact with three Americans in the area, at least two of whom are former Company B members. Barbara LNU was discharged in early 1976, is living in Koetzting (UQ4349) and is engaged to a German citizen. A check of recent Company B rosters identified SP4 b6 b6 MOS: 98G2LRU and SP4 b6, MOS: 98G2LCX as two possible individuals involved. SP4 b6 of the target unit has been in contact with the American owner of "Fulsome's Club" in Koetzting. A third American, possibly formerly stationed at the site, but not yet identified, allegedly works in Cham (UQ3054).

(U) (c) Source Activity:

a. B58,786 has departed the target area for reassignment.

b. PLO liaison contacts have revealed the following information concerning target personalities:

AEUMI-N-CE 5 April 1976
SUBJECT: CARELESS TOKEN (U)

(1) SFC b6 is a dedicated NCO who appears to know his job. He attended nearly three months of specialized training in the LFV system and related activities and is very knowledgeable of the mechanics involved in operation of the system. His assessment of individual members of the team coincides with the observations of the PLO. b6 appears to enjoy a spirit of mutual cooperation with the PLO. b6 advised the PLO that he has had very little trouble with the six personnel under his supervision, but the personalities of the six are beginning to emerge and he wished he had more indications of leadership qualities (i.e., willingness to accept responsibilities) from them.

(2) SP5 b6 nominally assistant NCOIC, is a quiet follower. He does his job, keeps his room very neatly, but is very non-assertive.

(3) SP5 Pack is probably the most responsible of the team, has an excellent personality, gets along well with everyone, and appears satisfied with his job and his hobby of motorcycles. His easy-going responsibility is attributed to his background; he is married and has one child. Prior to entering the Army, he had a good job in civilian life, and he knows how to work and to get along with others.

(4) SP4 b6 is a divorcee whose former wife is assigned to an ASA unit in West Berlin. He is a good worker but likes to enjoy himself after work. He has earned the respect of other team members because of his ability to separate work from play.

(5) SP4 b6 is an unknown quantity, but he has not caused any problems and he works well with others.

(6) SP4 b6 is an extrovert who enjoys being the center of attention. He does not get along well with SP4 b6

(7) SP4 b6 is an introvert and the complete opposite of b6 b6 has an acid personality and only tolerates having others around him. He does not like his present assignment and has submitted two requests to be returned to Augsburg. He appears to be able to sit in a room full of people and no one will notice he is there. PLO assessment of b6 and b6 are that they are typical ASA "kids", intelligent, not particularly gregarious, and sarcastic as long as they can get away with it.

693

BY USAINSCOM FOIPA
Auth Para 4-102 DOD 5200.1R

Page 2188 of 3957

AEUMI-N-CE 5 April 1976
SUBJECT: CARELESS TOKEN (U)

c. No problems of a security nature have arisen during the reporting period. There have been no indications of Hostile Intelligence targetting against target personnel during the reporting period. A vehicle from the Soviet Military Liaison Mission-Frankfurt was active in the target area on 6 March 1976. Four sightings were reported during a two hours period; three were non-PRA sightings and one was a shallow penetration of PRA #13 near Hoherbogen. One of the sightings was reported by Company B personnel.

6. (C) Comments:

a. In amplification of previous generalized comments concerning the continued viability of the operation at the target, it is recommended that this operation be terminated at its present location. Whether or not the operation should be moved to another location where more sensitive ASA operations are being conducted is beyond the purview of a recommendation by this Battalion. The recommendation to terminate the operation at its present location was discussed informally with the S2, USASAFSA on 18 March 1976 and was received with no serious objection. Rationale for the recommendation is as follows:

(1) With the departure of Company B personnel from the target area, a total of seven personnel remain. The operations now being performed are far less sensitive and involve activity that is essentially automatic. LFV team members are essentially mechanics. It is less likely that a hostile intelligence service will devote the same priority as they did previously to exploit target personnel. Any confidential source recruited to cover the target "from within" would result in one individual watching the other six. It is not believed that a confidential source relationship with SFC Helus would be desirable nor appropriate; an effective liaison relationship with the PLO should be able to achieve the same results. Recruitment of another member of the team and targetting him against team members would necessarily include that source reporting on b6 activities. With the close working relationship of all team members, this type of activity could well lead to a gradual breakdown in the team effort and adversely affect b6 leadership effectiveness, as it would provide for an unofficial complaint channel and allow team members to "gang up" on the NCOIC. rather than fill the goals of the operation as indicated in reference a. Any compromise at the target of such confidential source activities would probably lead to a complete breakdown in effective liaison between b6 and the PLO.

REGRADED UNCLASSIFIED
ON SEP -5 1997

Page 2189 of 3957

~~CONFIDENTIAL~~

AEUMI-N-CE
SUBJECT: CARELESS TOKEN (U)

5 April 1976

(2) SFC b6 appears to be completely competent to do his job and to control his subordinates. His apparent leadership and management techniques, his insights into the various personalities of team personnel and his indicated awareness of potential problem areas all indicate that the PLO should be able to accomplish the goals of the plan through regular liaison with b6 and occasional casual contact with other target personnel on an opportunity basis.

(3) The time and expense required to conduct confidential source operations to achieve the goals of the operation do not appear to be justified for the reasons stated above. It is believed the same results can be achieved through aggressive and effective liaison.

(4) Termination of the OPLAN (reference a) presupposes that nothing would change outwardly regarding the PLO's relationship to the target; he would still visit as often as before, he would conduct himself in the same manner and he would continue to submit detailed reports on the results of each liaison visit. Any information obtained as a result of liaison that indicated a threat to the target or its personnel, or character or personality weaknesses of target personnel would be reported to the S2, USASAFSA without delay and coordination would be effected for appropriate investigative action.

b. As an alternate proposal, if the recommendation in paragraph 6a is not favorably considered, recommend that the OPLAN remain in effect, but that it be changed to limit contact with target personnel to liaison, that further consideration to the recruitment of confidential sources be dropped, and that Quarterly Status Reports continue to be submitted.

AEAGB-CI(SO)

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

HQDA (DAMI-DOH)
WASH DC 20310

1. (U) References:

a. Operational Plan, 66th MI Group, 5 May 1975, subject as above, with 5th Indorsement, DAMI-DOH, OACSI, DA, 25 February 1976 (U).

b. Letter, AEAGB-CI(SO), USAREUR, 10 February 1976, subject as above (U).

2. (U) Attached is the Quarterly Status Report pertaining to the ICIP CARELESS TOKEN for the period ending 1 April 1976.

3. (U) This office concurs in the recommendation by the 511th MI Battalion that this ICIP be terminated. The diminishing sensitivity of the target activity, and reduction in target personnel would appear not to justify the futher expenditure of counterintelligence assets and efforts required by this ICIP. Consequently this office is directing initiation of formal coordination with US Army Security Agency (USASA), Field Station Augsburg for the purpose of terminating CARELESS TOKEN.

4. (U) Request HQ, USASA be advised of USAREUR plans to terminate this ICIP. Comments in this regard by your office and HQ USASA would be appreciated.

5. (U) ODCSI, USAREUR, Action Officer is Mr David R. Smith, AEAGB-CI(SO), HM 7354 (AUTOSEVOCOM 6742).

FOR THE DEPUTY CHIEF OF STAFF, INTELLIGENCE:

d. AEAGB-CI(SO), DTG 091510Z Mar 76, CARELESS TOKEN (U).

2. (U) This Quarterly Status Report is submitted in accordance with the above references and covers the period 16 January - 1 April 1976. A one-time adjustment in reporting dates has been made to allow the reporting period to coincide with each calendar quarter.

3. (C) General:

a. Company B, Forward Operations Battalion, terminated its operational mission at 2400 hours, 7 February 1976. During the period following, Company B personnel were engaged in transporting the classified operational files and equipment from the site to Augsburg. All Company B assigned or attached personnel have departed the target area. Destruction of all but two of the former Company B operations buildings is underway and is being performed by Facilities Engineers (FE) personnel from Regensburg and Grafenwoehr. Both of the two remaining buildings are to be removed under the Regensburg FE supervision under the same contract that will provide for landscaping the northern end of the compound, and removal of the rock at the northwestern end that presently blocks a portion of the antenna scanning area. The dismounted communications vans were not sold at the site as previously

reported would be the case, but instead have been removed to the Property Disposal Facility at Nuernberg for disposition.

b. Two members of Company B applied for European separations since November 1975, but it was not determined whether or not the applications had been approved, since both personnel had been transferred to Augsburg. SP5 b6 MOS: 98G2LRU, DPOB: b6 in b6 was scheduled for discharge on 20 May 1976. She had a US fee passport b6 issued 15 November 1973 in Boston, MA, and indicated her intent to remain in Europe for a 12 month period for travel purposes. SP5 b6 MOS: 98G2LRU, DPOB: b6 in b6 was scheduled for discharge on 9 January 1976, but extended his enlistment until 10 November 1976. He had a US fee passport b6 issued 6 July 1973 at New Orleans, LA, and indicated his intent to remain in Germany for 12 months to study. Both b6 and b6 were unmarried.

c. On 10 February 1976, CW2 b6 USASAFS Augsburg (USASAFSA) arrived on TDY at the target area accompanied by one or two other personnel from the same station. b6 is the Communications Security Custodian for USASAFSA and he supervised the removal of cryptographic communications equipment and escorted it back to USASAFSA. He stayed at the Kolmerhof Hotel in Rimbach, opposite the Company B administrative area. On 12 February 1976 he departed Rimbach and returned to Augsburg. On 12 February, the manager of the Kolmerhof Hotel contacted Company B to advise that an American guest had entered a room at the hotel on the night of 11-12 February. The guest was apparently extremely intoxicated, had become ill, and had vomited in large amounts all over the room, causing damage to carpets, furniture and bedding; evidence also indicated that the guest had urinated on the floor of the room. The manager presented a bill for DM 100 (approximately $40.00) and asked that it be passed on to the guest. The guest was determined to have been b6 and he readily admitted having caused the damage and subsequently paid the bill.

d. Additional information concerning the physical plant at the target was obtained as follows:

(1) Sewage service is provided by the firm Franz Lederer, St Sebastian Platz 1, Brueck (UQ0458). Water service is provided by the firm Hans Lober, Rauschstrasse, Nuernberg vorm Wald (UQ1069). The water is delivered by truck. The Comptroller Office, Seventh Army Training Center (SATC), Grafenwoehr advised that funds had been allotted to connect the target to the sewer and water systems of the adjacent French/Bundeswehr compound. The construction of those lines will be completed by July 1976 and will replace the septic and holding tanks now in use. Agency checks are being conducted on the above-mentioned firms.

699

AEUMI-N-CE
SUBJECT: CARELESS TOKEN (U)

5 April 1976

(2) OBAG (the Upper Bavaria Power Company) has declared the main power cable serving the target, the French/Bundeswehr compound and the nearby Bundespost (German postal system) TV relay tower to be inadequate. OBAG intends to lay a new power cable parallel to the present one, and has asked each using agency to contribute to the costs, on a pro-rata basis. As the situation now stands, loss of outside power would automatically put the LfV generator into operation. That generator is capable of supplying full electric power to both the operational and living areas of the target for a maximum of 206 hours. After that time, the generator must be shut down for refueling, oil and maintenance.

(3) The SATC Military Community Fire Marshal recently inspected the target and indicated that some water must be made available for emergency fire use. The Neukirchen-Heilig Blut (UQ5258) Volunteer Fire Department indicated it had a 40-minute reaction time. The projected hookup to the French/Bundeswehr compound water system should make sufficient water available.

e. Due to the staggered schedules of target personnel, they had decided against hiring a cook and will prepare their own meals as a community effort. Inquiries at the local Labor Office revealed an estimated monthly salary for a cook would amount to about DM 1300 and this had a major impact on their decision.

4. (C) Operational Matters:

a. Information provided in the previous Quarterly Status Report is corrected/clarified as follows: There will be no SI area at the target. The highest access/classification will be Secret/Crypto. A request for a technical inspection had been submitted through ASA channels several months previously, which was not known by target personnel. The entire area, including the common room, will be subjected to a technical inspection prior to 21 May 1976.

b. Reference paragraph 4c of reference c: b6 closed the Hoherbogen Restaurant in late February 1976 and moved to the Augsburg area. Since his departure, the restaurant has remained closed. The entire file concerning b6 will be prepared for transfer to Special Operations Detachment, 66th Military Intelligence Group for monitoring of b6 activities in the Augsburg area.

AEUMI-N-CE 5 April 1976
SUBJECT: CARELESS TOKEN (U)

c. b6 owner of "Tina's Bar" in Furth-im-Wald (UQ4364), also intended to move to Augsburg. b6 reportedly was a girl friend of several of the Company B senior enlisted personnel. b6 claimed to have enough money to purchase or lease any type of establishment in the Augsburg area that she chose. Agency checks will be conducted concerning b6 and the information will be passed to Special Operations Detachment if she moves to Augsburg.

d. Target members have the following privately-owned vehicles:

License Number	Type	Owner
KS-8739	1975 Chev van	b6
JA-9692	1964 VW sedan	
KH-8553	1970 Opel	
JT-8306	1967 Mercedes	

Additionally, SP5 Pack owns two motorcycles, neither of which is registered at the present time. He intends to register one of them and to store the other for shipment to CONUS when he is discharged in August 1976. SP4 b6 is buying a car from one of the civilian contractors in Augsburg and will pick it up soon.

e. Target members have had contact with three Americans in the area, at least two of whom are former Company B members. Barbara LNU was discharged in early 1976, is living in Koetzting (UQ4349) and is engaged to a German citizen. A check of recent Company B rosters identified SP4 b6 b6 MOS: 98G2LRU and SP4 b6, MOS: 98G2LCX as two possible individuals involved. SP4 b6 of the target unit has been in contact with the American owner of "Fulsome's Club" in Koetzting. A third American, possibly formerly stationed at the site, but not yet identified, allegedly works in Cham (UQ3054).

5. (U) Source Activity:

a. B58,786 has departed the target area for reassignment.

b. PLO liaison contacts have revealed the following information concerning target personalities:

Page 2196 of 3957

AEUMI-N-CE
SUBJECT: CARELESS TOKEN (U)

5 April 1976

(1) SFC b6 is a dedicated NCO who appears to know his job. He attended nearly three months of specialized training in the LFV system and related activities and is very knowledgeable of the mechanics involved in operation of the system. His assessment of individual members of the team coincides with the observations of the PLO. b6 appears to enjoy a spirit of mutual cooperation with the PLO. b6 advised the PLO that he has had very little trouble with the six personnel under his supervision, but the personalities of the six are beginning to emerge and he wished he had more indications of leadership qualities (i.e., willingness to accept responsibilities) from them.

(2) SP5 b6, nominally assistant NCOIC, is a quiet follower. He does his job, keeps his room very neatly, but is very non-assertive.

(3) SP5 Pack is probably the most responsible of the team, has an excellent personality, gets along well with everyone, and appears satisfied with his job and his hobby of motorcycles. His easy-going responsibility is attributed to his background; he is married and has one child. Prior to entering the Army, he had a good job in civilian life, and he knows how to work and to get along with others.

(4) SP4 b6 is a divorcee whose former wife is assigned to an ASA unit in West Berlin. He is a good worker but likes to enjoy himself after work. He has earned the respect of other team members because of his ability to separate work from play.

(5) SP4 b6 is an unknown quantity, but he has not caused any problems and he works well with others.

(6) SP4 b6 is an extrovert who enjoys being the center of attention. He does not get along well with SP4 b6

(7) SP4 b6 is an introvert and the complete opposite of b6 b6 has an acid personality and only tolerates having others around him. He does not like his present assignment and has submitted two requests to be returned to Augsburg. He appears to be able to sit in a room full of people and no one will notice he is there. PLO assessment of b6 and b6 are that they are typical ASA "kids", intelligent, not particularly gregarious, and sarcastic as long as they can get away with it.

Page 2197 of 3957

AEUMI-N-CE 5 April 1976
SUBJECT: CARELESS TOKEN (U)

c. No problems of a security nature have arisen during the reporting period. There have been no indications of Hostile Intelligence targetting against target personnel during the reporting period. A vehicle from the Soviet Military Liaison Mission-Frankfurt was active in the target area on 6 March 1976. Four sightings were reported during a two hours period; three were non-PRA sightings and one was a shallow penetration of PRA #13 near Hoherbogen. One of the sightings was reported by Company B personnel.

6. (C) Comments:

a. In amplification of previous generalized comments concerning the continued viability of the operation at the target, it is recommended that this operation be terminated at its present location. Whether or not the operation should be moved to another location where more sensitive ASA operations are being conducted is beyond the purview of a recommendation by this Battalion. The recommendation to terminate the operation at its present location was discussed informally with the S2, USASAFSA on 18 March 1976 and was received with no serious objection. Rationale for the recommendation is as follows:

(1) With the departure of Company B personnel from the target area, a total of seven personnel remain. The operations now being performed are far less sensitive and involve activity that is essentially automatic. LFV team members are essentially mechanics. It is less likely that a hostile intelligence service will devote the same priority as they did previously to exploit target personnel. Any confidential source recruited to cover the target "from within" would result in one individual watching the other six. It is not believed that a confidential source relationship with SFC Helus would be desirable nor appropriate; an effective liaison relationship with the PLO should be able to achieve the same results. Recruitment of another member of the team and targetting him against team members would necessarily include that source reporting on b6 activities. With the close working relationship of all team members, this type of activity could well lead to a gradual breakdown in the team effort and adversely affect b6 leadership effectiveness, as it would provide for an unofficial complaint channel and allow team members to "gang up" on the NCOIC. rather than fill the goals of the operation as indicated in reference a. Any compromise at the target of such confidential source activities would probably lead to a complete breakdown in effective liaison between b6 and the PLO.

REGARDED UNCLASSIFIED
ON SEP 05 1997
BY CDR USAINSCOM FOI/PO
Auth Para 1-603 DoD 5200.1R

703

AEUMI-N-CE 5 April 1976
SUBJECT: CARELESS TOKEN (U)

(2) SFC b6 appears to be completely competent to do his job and to control his subordinates. His apparent leadership and management techniques, his insights into the various personalities of team personnel and his indicated awareness of potential problem areas all indicate that the PLO should be able to accomplish the goals of the plan through regular liaison with b6 and occasional casual contact with other target personnel on an opportunity basis.

(3) The time and expense required to conduct confidential source operations to achieve the goals of the operation do not appear to be justified for the reasons stated above. It is believed the same results can be achieved through aggressive and effective liaison.

(4) Termination of the OPLAN (reference a) presupposes that nothing would change outwardly regarding the PLO's relationship to the target; he would still visit as often as before, he would conduct himself in the same manner and he would continue to submit detailed reports on the results of each liaison visit. Any information obtained as a result of liaison that indicated a threat to the target or its personnel, or character or personality weaknesses of target personnel would be reported to the S2, USASAFSA without delay and coordination would be effected for appropriate investigative action.

b. As an alternate proposal, if the recommendation in paragraph 6a is not favorably considered, recommend that the OPLAN remain in effect, but that it be changed to limit contact with target personnel to liaison, that further consideration to the recruitment of confidential sources be dropped, and that Quarterly Status Reports continue to be submitted.

---

1. (U) MISSION.

a. Requirement: To collect significant counterintelligence information through the utilization of overt liaison contacts (OLC). Casual Sources (CS) and Confidential Recruited Sources (CRS) assigned to the US Army Security Agency Field Station Berlin (USASAFSB), hereafter referred to as ASA. The Sources will be specifically targetted against Hostile Intelligence Services (HoIS) activities directed towards ASA and against the security vulnerabilities of ASA personnel.

b. Objective: To provide responsible commanders and supervisors in ASA with a concentrated program designed to detect, eliminate or neutralize

Operations Plan,

(1) espionage, sabotage, subversion or deliberate security violations against ASA or ASA personnel;

(2) disloyalty, disaffection, and security weaknesses prevalent among personnel assigned to ASA;

(3) individuals in sensitive positions who, by character weaknesses or personal conduct, render themselves vulnerable to coercion or blackmail by HoIS, either while the individuals are in their present positions or when they are assigned later to another unit.

c. Base of Operations: Berlin Field Office, 766th MI Detachment, West Berlin.

2. (U) PERSONNEL.

a. Source Personnel: Not yet selected. Spotting has started with the assistance of S-2, ASA, but no vetting or recruitment of Sources will be made prior to the approval of this OPLAN. To give adequate coverage of ASA, a minimum of 12 CS/CRS's will be required within ASA. The Sources must meet the following criteria:

(1) Reasonable amount of intelligence and high degree of common sense.

(2) Above-average sense of loyalty to duty and country, and a strong dedication to duty assignment.

(3) Trustworthy, reliable and discreet.

(4) Ability to take directions.

(5) Clean record, to include no character deficiencies.

(6) DEROS not later than one year from recruitment.

b. US Army Intelligence Personnel:

(1) Project Liaison Officer (PLO): The PLO will be responsible for OLCs and the spotting, assessing and recruitment of Sources at ASA. The OIC, CE/SAR Team, will be the PLO.

(2) Project Control Officer (PCO): The PCO will be responsible for the management and control of Sources in this operation. The OIC, CE Programs, will be the PCO.

(3) Case Officers (CO): Only Special Agents (S/A) assigned to the Berlin Field Office will initially be tasked to act as CO's.

Operations Plan,

(4) Other Supervision:

(a) Supervision for the conduct and operating control of this operation will be vested in the OIC, CE Section.

(b) Broad operational [illegible] control and policy guidance are vested in the Berlin Field Office Commander and Operations Officer.

(c) The Director of Operations, Headquarters, 66th MI Group, will be responsible for the operational control of this ICIP, will coordinate all ICIP activities with the ICIP Control Officer, ODCSI, USAREUR, and with the Commander, USASA Europe, and will levy requirements on other subordinate counterintelligence (CI) elements of the 66th MI Group as appropriate.

d. b1

4 (~~U~~) EXECUTION.

a. Background: The location and highly sensitive mission of ASA make it of logical interest to HoIS, particularly in this area to Soviet

CONFIDENTIAL

~~CONFIDENTIAL~~

Operations Plan,

Intelligence Services (SIS) and Intelligence Services of the German Democratic Republic, whose technical and personal access to ASA areas are facilitated by the geographical location of ASA which is completely surrounded by a Communist country. HoIS can use some uncontrolled means of transportation to enter and leave the vicinities of ASA installations, and can use any of several official East Bloc representations in the area as cover for their activities. Past investigations and CI special operations have confirmed HoIS interest in ASA and in HoIS' collection of data on ASA personnel, to include personalia, character traits and weaknesses, and possible motivating points. Headquarters, USASA, Arlington Hall, Virginia, has approved the use of ASA personnel in ICIP.

b. Concept:

(1) The cultivation and use of OLC's, and the spotting, assessing and recruitment of non-ASA personnel in the area will continue in effect and be expanded as necessary, without requiring prior approval under this OPLAN.

(2) Upon approval of this OPLAN, coordination will be effected with S-2, ASA, for purposes of obtaining Leads and for facilitating screening of ASA personnel records. In addition, the PLO will develop other means of spotting and assessing Leads as described in paragraph 3a(2) above. PLO will also be the initial point of contact for those ICIP assets who have been transferred from another area to this area.

c. Source Activities in the Target Area: Sources will perform their normal military duties while covertly and discreetly attempting to answer the following EEI, both from on-duty and off-duty contacts and experiences:

(1) Identification of ASA personnel who closely and continuously associate with foreign nationals having connections with Communist countries;

(2) Identification of ASA personnel who perform authorized or unauthorized travel to Communist countries;

(3) Detection of disaffected ASA personnel;

(4) Detection of ASA personnel whose activities and/or character weaknesses render them vulnerable to blackmail or HoIS exploitation;

(5) Detection of ASA personnel whose activities are indicative of potential defection or desertion;

(6) Detection of ASA personnel who have memberships in or associate with members of organizations, clubs, groups or other activities which pose actual or potential threats to the security of ASA.

Page 2206 of 3957

Operations Plan,

d. Security Considerations:

(1) Individuals who are approached for recruitment who decline to function as Sources will be asked to sign security statements which clearly state that it is unlawful to make any unauthorized disclosure concerning the recruitment approach or the activities under this OPLAN.

(2) Individuals who are approached for recruitment prior to their arrival at the ASA target area, and who decline to function as Sources, will be considered for assignment to some location other than the target area, if circumstances and military priorities permit.

(3) No actual or potential Source will be made aware of the source relationship with any other individual in this program.

(4) All CRS's will be met under covert conditions, away from the target area; under conditions that will provide maximum security against inadvertent disclosure of the source relationship.

(5) Separate and plausible cover stories for status and for action will be arranged with each CRS to provide a logical reason for regular meetings between CRS and CO.

(6) Each CRS will be provided sufficient training in security and meeting arrangements so as to minimize possibilities of compromise of the source relationship.

(7) In the event of compromise of a CRS and/or the nature of this operation, termination of the source will follow under such conditions as are warranted by the circumstances of the compromise. In the event of a compromise, denial of US Army Intelligence involvement will be achieved where plausible.

(8) Non-US Local Wage Rate Investigators employed by the 66th MI Group will not be made aware of the existence of this OPLAN or of the Source relationship with any CRS.

(9) Knowledgeability of this OPLAN, to include the identity of the target, will be kept to a strict minimum. Only those individuals with a strict "need to know" will be made cognizant.

(10) Upon the termination of a Source in this area, proper debriefing action will be taken in accordance with 66th MI Group Regulation 381-10 and consideration will be given to the transfer of Source to the appropriate CI element in the Source's new assignment area.

Operations Plan,

e. Production:

(1) Operational information will be forwarded by Agent Report and/or other appropriate reporting means to Headquarters, 66th MI Group, ATTN: AEUMI-T-CI.

(2) Suitability information or security information having an immediate, significant impact on the command will be brought to the attention of the Commander, USASAFSS, through his S-2.

(3) Information pertaining to or identifying overt or covert sources will not normally be passed as individual items to ASA without the specific approval of DCSI USAREUR, through Headquarters, 66th MI Group.

(4) Once this OPLAN has been approved and placed into operation, progress reports will be submitted every 60 days.

(5) Periodic briefings to ASA can be accomplished through OLC's by the PLO.

ANNEX B - COORDINATION BACKGROUND

1. (U) (C) CI support provided by the 766th MI Detachment to the US Army Security Agency Field Station, Berlin (USASAFSB) is in accordance with the provisions reflected in OPLAN titled project Filman. The proposal to improve CI support provided to USASAFSB by cancelling project Filman and replacing it with an existing Aggressive Defensive Source Acquisition Program (ADSAP) was presented to USASAFSB in a letter dated 19 September 1975, copy of which is attached to this Annex as Inclosure 1.

2. (U) (C) USASAFSB forwarded to Headquarters, US Army Security Agency, Arlington Hall Station, the above referenced letter (Inclosure 1) with a recommendation that project Filman be replaced with the 766th MI Detachment's ADSAP. Copy of the USASAFSB letter is attached to this Annex as Inclosure 2.

3. (U) (C) In a letter dated 20 October 1975, the Commander of the US Army Security Agency concurred in the cancellation of project Filman and initiation of the 766th MI Detachment's ADSAP program. A copy of the letter is attached to this Annex as Inclosure 3.

AEUMI-BCE

SUBJECT: Project Filman (U)

Commander
USASAFSB
ATTN: S-2
APO 09742

1. (U) The purpose of this proposed action is to provide increased and improved counterintelligence support to the US Army Security Agency Field Station, Berlin (USASAFSB).

2. (U) In 1970, a CI operations plan was submitted by Berlin Field Station, 66th MI Group, to correspond with the activation of the USASAFSB site known as "Teufelsberg". The operations plan was designed to provide counterintelligence support to the project through the utilization of sources, either among the local work force or through personnel located in establishments frequented by the work force. Because the local work force was too transient in nature to effectively insert a source before they completed work on site, source recruitment efforts were concentrated on individuals who associated with ASA personnel at local entertainment establishments and at social functions. Initially through coordination with the S-2, USASAFSB, a list of establishments frequented by USASAFSB personnel was prepared and attempts were made to introduce sources into some of the establishments. We presently have six sources under the Filman project who have provided limited information. However, to date these sources have provided routine information of low level CI significance, primarily of interest to US Army Berlin Brigade and not to USASAFSB. In approximately 1973, USASA withdrew financial support of Filman and fiscal responsibility reverted to the 66th MI Group. The primary difficulty with the Filman project has been the peripherial nature of the sources and their difficulty in becoming accepted into ASA circles, since ASA personnel appear to associate in fairly close knit ASA circles. In short, peripheral sources have provided only peripheral leads.

FILED IN 1001 FILE

~~CONFIDENTIAL~~

19 SEP 1973

AEUMI-BCE
SUBJECT: Project Filman (U)

3. (U) I propose that the Filman project be cancelled, that permission be granted to recruit ASA personnel within USASAFSB, and that the Aggressive Defensive Source Acquisition Program (ADSAP) be used as the vehicle to provide [illegible] counterespionage support to USASAFSB. A brief description of ADSAP and general ADSAP MOI is attached as Inclosure. This would enhance CI coverage of USASAFSB by providing more flexibility within the framework of one source program, access to the target areas and target personalities, a wider range of operations for sources, and more streamlined administrative procedures for the management of sources. Current Filman sources will be converted to the ADSAP program. Sources will be preferably recruited within the target activity to provide information on personalities and activities. Additional sources will be recruited on the periphery or outside of the target sites in order to enhance overall CI coverage. Once it has been determined where a possible shortfall of information occurs, a concerted effort will be made to obtain sources who can provide that information. Indiscriminant selection and recruitment of sources will be avoided and emphasis will be placed on a prospective source's ability to fulfill the requirements levied on him. 766th MID will provide the S-2, USASAFSB with the desired qualifications for personnel to be utilized in the program and he will be requested to screen present personnel assigned to his unit to determine those best qualified for recruitment. ADSAP will not supplant the S-2, USASAFSB program of internal informants, but will augment his present activities. A target analysis will be prepared by this Detachment in coordination with the S-2, USASAFSB. Information solely of a suitability nature, will be reported directly to the S-2, USASAFSB. All other information will be reported in accordance with reporting requirements, as outlined in LOI 6-TD, 66th MI Group.

4. (U) Preliminary discussions, conducted in August 1975, with the Commander, USASAFSB, the Deputy Chief of Staff, Security, USASA Headquarters, Arlington Hall, Virginia, and the Commander, 66th MI Group, indicated a favorable response to the above proposal.

5. (U) This Detachment requests your comments, recommendations, and approval of the above proposal.

AGGRESSIVE DEFENSIVE SOURCE ACQUISITION PROGRAM (ADSAP)

ADSAP concerns itself with two categories of human sources as defined by 66th MI Group LOI Number 6-TD. These two source categories are Conventional and Confidential. The ADSAP is a CI threat information collection program and sources recruited under this program should not be recruited for coverage of a specific CE target. Sources are recruited within and on the periphery of sensitive installations and activities by combining both active and passive measures to counter the information collection capability of hostile intelligence services (HoIS) operating against US Forces. The passive measures are designed to protect defense information from unauthorized disclosure or compromise, while the aggressive measures are designed to obtain information which will lead to the detection and neutralization of HoIS efforts directed against US Forces.

General ADSAP EEI:

a. Detection of suspicious activities, undue inquisitiveness or obvious lack of good security practices on the part of or involving US Forces personnel.

b. Identification of US Forces personnel who closely and continually associate with foreign nationals having connections with Soviet Bloc countries.

c. Identification of US forces personnel who make unauthorized or frequent authorized travel to Soviet Bloc countries.

d. Identification of US Forces personnel who have continued contact with local national personnel.

e. Detection of disaffected personnel.

f. Identification of US Forces personnel whose activities and/or character weaknesses either individually or in a combination constitute a clear and significant threat to US Forces in that they have rendered the US Forces connected personnel susceptible to exploitation by HoIS. Susceptibility to HoIS exploitation because of adverse suitability factors should be coupled with at least one of the foregoing indicators of possible HoIS interest. Specific suitability factors which could render US Forces personnel vulnerable to HoIS exploitation would be excessive indebtedness or recurring financial difficulties; unexplained affluence; conduct such as criminal, immoral or homosexual acts which could render

SUBJECT: Aggressive Operational Support Acquisition Program (ALSAP) (U)

Commander
US Army Security Agency
ATTN: DCSSEC
Arlington Hall Station
Arlington, Virginia 22212

(U) 1. (C) Attached is a copy of a letter received on 19 September 1975 from Commander, 766th Military Intelligence Detachment, 66th MI Group, entitled "Project FILHAN". The letter is self explanatory but can be summarized as follows: Counterintelligence support to USASAFS Berlin has been conducted since 1970 under the provisions of FILHAN. Although FILHAN was satisfactory in concept, it suffered from a lack of precise support definition, particularly in source acquisition and reporting.

(U) 2. (C) Cdr, 766th MID, proposes an ALSAP support arrangement which would provide more direct source access to USASA personnel and direct control of source coverage of actual or potential espionage approaches. Cdr, USASAFS Berlin concurs in the concept and desires to implement the program. COL Holden was briefed on the program during his visit to Berlin in August 1975 and concurred in the proposal. [illegible], DA ACSI, and [illegible], [illegible], were also briefed in September 1975 and supported the concept.

(U) 3. (C) Request your concurrence in cancellation of Project FILHAN and adoption of the ALSAP by USASAFS Berlin/766th MID. Appropriate safeguards will be maintained with regard to withdrawal of USASA sources should hostile intelligence [illegible] a USASA soldier. Request a reply as soon as possible so we can begin negotiating a new Memorandum of Understanding with 66th MI Group.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Request for Termination of ICIP Operation CANTER RIDE (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 5 May 1976

ACTION REQUIRED

To obtain formal ACSI approval for termination of subject ICIP.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without resource to other sources.)*

1. (C) Background:

a. By ltr, 25 Feb 75, subject: CANTER RIDE (U), CDR, USAINTA requested approval for ICIP OPLAN CANTER RIDE (U). The OPLAN provided for the insertion of an MI Warrant Officer in cover status into the Advance Sensors Directorate of the US Army Missile Command (USAMICOM), Redstone Arsenal, Alabama. This specialized CI support was requested by CG, USAMICOM, to enhance the security of the Directorate and determine the extent, if any, of hostile intelligence penetration of Redstone Arsenal. The OPLAN was approved by the ACSI on 4 Mar 75.

b. By 1st Ind, 8 Apr 76, subject as above, CDR, USAINTA advised that on 23 Feb 76, the ACSI gave verbal approval for termination of subject ICIP. The CDR, USAINTA recommended formal termination approval.

2. (C) Discussion:

a. After a thorough review, it has been determined that subject ICIP has successfully accomplished its objective.

b. CI security support is being provided the USAMICOM by the ~~902d MI Gp by the~~ 902d MI Gp Redstone Resident Office, under the provisions of its Direct Support Comprehensive Counterintelligence Program (DSCCR).

c. This action furnishes formal approval to CDR, USAINTA to terminate ICIP CANTER RIDE (U)

3. (U) Recommendation: That the 2d Ind, (TAB A) be approved and signed by the ACSI.

MIIA-GPB-AC(SP) 2 April 1976

SUBJECT: Request for Termination of ICIP Operation CANTER RIDE (U)

Commander
U. S. Army Intelligence Agency
ATIN: MIIA-SO
Fort Meade, Maryland 20755

1. (U) ~~(C)~~ After a thorough review, it has been determined that ICIP Operation CANTER RIDE has successfully accomplished its objective. To continue the operation utilizing SCOPI Source IC-B-083 would be an improper utilization of an MI warrant officer, and would increase the potential for compromise as long as the insert Source remains in the target area.

2. (U) ~~(C)~~ On 18 February 1976, I visited Major General Turnmeyer, Commander, U. S. Army Missile Command, Redstone Arsenal, Alabama. During the visit, Major General Turnmeyer requested a recommendation concerning the continuation of the operation. I indicated that there was no known indication of compromise, but in view of the above, recommended that the operation be terminated and Source extracted as soon as the personnel system would permit. Major General Turnmeyer expressed his deep appreciation for the information previously provided through the operation, and while expressing his complete concurrence that the operation had successfully met its objective, readily agreed that it should be terminated at once and the Source be extracted.

3. (U) ~~(C)~~ The above information was passed by my staff to members of the Support Detachment, USAINTA, and LTC Grimes, Commander, Special Operations Detachment, USAINTA, on 19 February 1976. Brigadier General Thompson, Commander, USAINTA, was informed of the above on 20 Feburary 1976 and Major General Aaron, ACSI, DA, on 23 February 1976.

4. (U) ~~(C)~~ On 23 and 27 February 1976, the 902d MI Group requested USAINTA assistance in the reassignment of Source IC-B-083. As a result of actions completed by the Support Detachment, USAINTA, Source is in receipt of reassignment orders with an expected PCS date of 8 April 1976.

HEADQUARTERS, U. S. ARMY INTELLIGENCE AGENCY, Fort Meade, Maryland 20755

TO: HQDA (DAMI-DOH/LTC HAENDLE), WASH DC 20310

1. ~~(C)~~ As indicated by paragraph 2 of the basic letter, the 902d Military Intelligence Group and the Commanding General of the US Army Missile Command determined in February 1976 that the primary objective of ICIP CANTER RIDE had been accomplished and the operation should be terminated. On 20 February 1976 verbal approval of termination was given by the CDR, USAINTA- and by the ACSI on 23 February 1976.

2. ~~(C)~~ Counterintelligence security support is being provided to the US Army Missile Command by the 902d MI Group under its Direct Support Comprehensive Counterintelligence Program (DSCCP) as described in paragraph 5 of the basic letter. Arrangements have been made for the extraction and reassignment of the insert source used in this operation. Source will be debriefed and terminated subsequent to his 8 April 1976 reporting date by the 902d MI Group, which is also his new unit of assignment.

3. (U) Recommend formal approval of the termination of ICIP CANTER RIDE.

ACTION SHEET

SUBJECT	CONTROL NUMBER
CDR USAINSCOM FOI/PA AUTH PARA 1-603 DoD 5200.1-R Request for Termination of ICIP Operation CANARY EFFORT (U)	
	OFFICE SYMBOL: DAMI-DOH; SUSPENSE:
	DATE: 6 May 1976

ACTION REQUIRED

To obtain formal ACSI approval for Termination of subject ICIP.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) ~~(C)~~ Background:

a. Subject ICIP was established several years ago to support Army organizations at Fort Ritchie, MD.

b. In Sep 75, the reorganization and redesignation of the US Army Communications Command (USACC) - CONUS as the 7th Signal Command resulted in a realignment of target areas of ICIP CANARY EFFORT (U), and increased coverage to the Telecommunications Directorate, the Alternate Joint Command Center (AJCC) the Alternate National Military Command Center (ANMCC), the Alternate National Command Center Support Directorate (ANMCCSD) and the East Coast Telecommunications Center (ECTC). Three sources and a Project Case Officer were used in this ICIP.

c. By 1st Ind, 8 Apr 76, subject as above, CDR USAINTA advised that on 23 Feb 76, the ACSI gave verbal approval for termination of subject ICIP and recommended that subject ICIP be given formal termination approval.

2. (U) ~~(C)~~ Discussion:

a. ICIP CANARY EFFORT (U) was chosen by the CDR, 902d MI Group to be replaced by an overt comprehensive all-source, multi-discipline security support concept as defined in 902d MI Group Pamphlet 381-3, subject: Direct Support Comprehensive Counterintelligence Program, to be published.

b. The ICIP sources previously supporting the operation were terminated without prejudice during Feb 76. The Great Skills Project Case Officer was released from duties on 1 Mar 76.

c. Supported commanders were briefed on CANARY EFFORT termination during Mar 76, and assured that this action in no way relieved the 902d MI Group of the responsibility for continued overt, all-source, multi-discipline support subsequent to 31 Mar76.

MIIA-GPB-AC(SP) 2 April 1976

SUBJECT: Request for Termination of ICIP Operation CANARY EFFORT (U)

Commander
U. S. Army Intelligence Agency
ATTN: MIIA-SO
Fort Meade, Maryland 20755

1. (U) References:

a. USAINTA Letter, MIIA-SO-SA, subject: Change in ICIP CANARY EFFORT Support (U), dated 27 Jan 76, with 902d MI Group 1st Ind, MIIA-GPB-AC(SP), dated 29 Jan 76.

b. 902d MI Group Letter, MIIA-GPB-AC(SP), subject: Termination of ICIP Operation CANARY EFFORT (U), dated 3 March 1976.

2. (U) As outlined in the above references, copies of which have been provided under separate cover, I have chosen ICIP Operation CANARY EFFORT to be replaced by an overt comprehensive all-source, multi-discipline security support concept as defined in 902d MI Group Pamphlet 381-3, subject: Direct Support Comprehensive Counterintelligence Program, to be published. Toward this end, confidential ICIP sources previously supporting the operation were terminated without prejudice during the month of February 1976. The Great Skills Project Case Officer was released from duties in support of the operation on 1 March 1976.

3. (U) The termination of the ICIP Operation was coordinated by my staff with LTC Grimes, Commander, Special Operations Detachment, USAINTA, on 19 February 1976. The oral approval of the termination was gained from Brigadier General Thompson, Commander, USAINTA, and Major General Aaron, ACSI, DA, on 20 and 23 February 1976 respectively. Supported commanders were briefed on the termination of the operation during March 1976 in conjunction with the regularly scheduled quarterly ICIP briefings, and assured that this action in no way relieved the 902d MI Group of the responsibility for continuing overt, all-source, multi-discipline support subsequent to 31 March 1976.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 26 Mar 76

ACTION REQUIRED: To obtain approval of the quarterly ICIP report

MEMORANDUM FOR RECORD (*Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without resource to other sources.*)

1. (U) BACKGROUND: On 8 Feb 72, the Under Secretary of the Army requested that the VCSA provide a quarterly report on all ICIP operations.

2. (U) DISCUSSION:

a. During the past quarter there were no significant changes in number of operations or activities within operations. Reports of questionable suitability and security hazards were passed to the supported commands.

b. Memorandum at TAB A transmits summaries of ICIP operations through the VCSA to the Under Secretary of the Army for second quarter FY 76.

3. (U) RECOMMENDATION: That the Memorandum at TAB A be approved and signed by the ACSI.

(U) CANARY EFFORT: (OACSI Revalidation - 4 Feb 75)

a. Location: Fort Ritchie, MD.

b. Confidential Source Utilization: Three confidential sources.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) During the reporting period, adverse suitability information (indebtedness, drug or alcohol abuse, moral improprieties and mental instability) was reported concerning 17 individuals assigned sensitive duties. Monitoring continues; a limited investigation has been requested on one of the individuals.

(2) This ICIP had previously identified alleged users of narcotics. As a result of an investigation conducted by USACIDC, 13 of these individuals were apprehended and charged with drug violations. Eleven of these 13 had security clearances and had access to the Alternate Joint Command Center.

e. Operational Status:

(1) On 18 December, the Project Liaison Officer (PLO) presented a Quarterly Progress Report to the Commander, US Army Communications Command (USACC). On 30 December 1975, the PLO presented the Quarterly Progress Report to the Commander, Fort Ritchie; Commander, USACC Site R Telecommunications Center; and the Deputy ACSI&S, 7th Signal Command. All expressed appreciation and continued support for the ICIP.

(2) At the request of the Director, Administrative Services, JCS, the portion of this operation in support of the Alternate National Military Command Center was terminated.

2. (U) CANINE PLATE: (OACSI Revalidation - 4 Feb 75)

a. Location: Seneca Army Depot (SAD), Romulus, NY.

b. Confidential Source Utilization: None.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: None.

e. Operational Status:

During the period, one conventional source was terminated due to his transfer from the area. One source is under consideration for recruitment. He is in the Maintenance Division, Directorate for Special Weapons (DSW). DSW is the primary SAD activity being supported by this ICIP. On 21 December 1975, the PLO provided the Quarterly Briefing Report to COL Alden L. Cox, CDR, Seneca Army Depot.

3. (U) CANTER RIDE: (OACSI Approval - 4 Mar 75)

a. Location: US Army Missile Command (USAMICOM), Redstone Arsenal, AL.

b. Confidential Source Utilization: One.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) Adverse suitability information pertaining to a GS-12 civilian physicist with access to Secret information who was assigned to the Optical Guidance Technology Office (OGTO), indicated that he probably was the catalyst for the sexually-oriented gatherings of OGTO employees which prompted a Sep 74 AR 15-6 investigation of OGTO personnel ordered by the CG, USAMICOM. As a result of that investigation, the present ICIP operation was initiated. The employee, who is apparently obsessed with sex has had numerous extra-marital liaisons during the last five years. He transferred to the Infrared Technology Office, Advanced Sensors Directorate, a highly sensitive office, in Aug 74. The Source, who obtained information by elicitation, was successful in identifying him only in recent weeks. The employee's departure from OGTO apparently broke up the clique and Source could uncover no new evidence of such activities among remaining OGTO employees. Near the close of the reporting period, the employee applied for a position in Japan. The Commander, USAMICOM, was provided a summary of the information on the employee for appropriate command action.

(2) Source identified an Army 1LT who was attempting to civilianize his duty position. The individual is a naturalized citizen who was born in Shanghai, China. His security clearance was based on a favorable NAC only.

e. Operational Status: On 10 October 1975, the Commander, 902d MI Group and the Project Liaison Officer briefed MG George E. Turnmeyer, the newly assigned Commander, USAMICOM. MG Turnmeyer affirmed his approval of the operation. In a subsequent briefing on 10 November 1975, MG Turnmeyer was apprised of the information reported in sub-paragraph d(1) above. It was concluded that since the operation had provided the information initially sought, it is now necessary to refocus the effort to emphasize security matters rather than suitability problems.

4. (C) CANVAS TAX: (OACSI Revalidation - 4 Feb 75)

a. Location: Sierra Army Depot (SIAD), US Army Materiel Command, Herlong, CA.

b. Confidential Source Utilization: One.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained: None.

e. Operational Status:

One individual is under assessment for use as a confidential source. The quarterly progress report to SIAD officials was delayed until after the Christmas holidays. It is expected that the report will be presented sometime in January 1976.* The Commander and staff officers knowledgeable of the ICIP continue to provide their support.

*RPT SUBMITTED IN FEB 76; TO BE IN NEXT ICIP REPORT.

5. (U) CENSUS TIME: (OACSI Revalidation - 4 Feb 75)

a. Location: Pentagon Telecommunications Center (PTC), US Army Communications Command (USACC), The Pentagon, Washington, DC.

b. Confidential Source Utilization: None.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) As a result of information gained concerning a suicide attempt by an Army NCO assigned to PTC a Limited Investigation was initiated. The investigation revealed that the NCO has a large number of outstanding debts, has lied on loan applications, and recently ordered a 1976 automobile which will cost in excess of five thousand dollars. Interviews concerning the NCO revealed alleged drug usage and homosexuality. USAINTA directed that the NCO be interviewed concerning the allegations against him. The NCO has been assigned to the Logistics Branch, PTC, pending results of the Limited Investigation.

(2) Adverse suitability information was reported on two additional NCOs assigned to PTC. Based on medical reports and rebellious attitudes one NCO was released from the Army by board action. The second NCO was reassigned to another Branch within the command and his access to classified information was suspended for 90 days pending resolution of adverse suitability information. The NCO after a night of heavy drinking at the Ft Meyer NCO Club, began hitting his wife when she tried to arouse him after he had "passed out." The wife filed assault charges with the Military Police and withdrew them later. The PTC Commander counselled the NCO on his drinking and marital problems and assigned him duties where he has no access to classified information.

e. Operational Status:

On 18 Dec 1975, the Project Liaison Officer (PLO), CENSUS TIME, presented the Quarterly Progress Briefing to COL Donald E. Clark, CDR, PTC. The PLO, CANARY EFFORT, was also present at the briefing. In a re-evaluation of the target priorities within PTC, COL Clark requested that the PTC element of the Army Operations Center and the Hoffman Telecommunications Center be covered by ICIP sources. Accordingly, the OPLAN for CENSUS TIME will be changed to include these targets.

6. (U) CENTAVO KID: (OACSI Revalidation - 4 Feb 75)

a. Location: Harry Diamond Laboratories (HDL), Adelphi, MD.

b. Confidential Source Utilization: None.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) Suitability information concerning an employee of the Woodbridge Research Facility (WRF), a branch of HDL located in Woodbridge, VA, involved a problem of alcohol abuse. After counseling, the employee is undergoing a rehabilitation program.

(2) From 7 October to 6 November 1975, a courtesy penetration test of HDL's Adelphi Facility was conducted. The penetrations succeeded in revealing several security weaknesses and the supported command has taken corrective actions to remedy them. A number of the Security Guards were transferred and guard procedures were changed. A new magnetic coded badge has been approved for purchase in FY 77. The PLO will also give a lecture to the HDL Guard Force on the penetration test and ways to foil attempted penetrations.

e. Operational Status:

On 3 December 1975, the PLO presented the Quarterly Progress Report to COL Thomas McGregor, CDR, HDL. Also present at the briefing were MAJ Kenneth F. Keller and Mr. James F. Yeick, Security Officer, HDL.

7. (X) GONDOLA STAR: (OACSI Revalidation - 11 Jul 75)

a. Location: Aberdeen Proving Ground (APG), Aberdeen, MD.

b. Confidential Source Utilization: Eight.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained.

(1) Sources reported several instances of foreign contact by military and DOD civilian personnel in the supported activity. In one instance a citizen of the Federal Republic of Germany was assigned on an exchange program to work in the US Army Human Engineering Laboratory (HEL) until Sep 76. The source, who provided information on an employee's travel to Poland and Czechoslovakia in 1975, provided additional information on the employee's plans to travel to those countries again in 1976. A report of a civilian DOD employee at Edgewood Arsenal with some unexplained periods of time in his background prompted a request for a Limited Investigation from the supported command.

(2) The source who reported on travel to the USSR in 1975 of a man and wife DOD employees of the supported activities at HEL and the US Army Materiel Systems Analysis Activity (USAMSAA) provided information on plans of the couple to take another tour to Russia in 1976.

(3) Sources reported allegations of questionable suitability factors involving eight employees assigned to the supported command. These unsubstantiated allegations consisted of five incidents of extramarital relations, one suggestion of other immoral conduct, one case of mental instability and one allegation of a fraudulent claim on a TDY voucher. Efforts are underway to substantiate or refute the reported allegations.

(4) Sources reported five instances of security weaknesses or poor security practices. These five instances consisted of two unattended offices in which security containers were left open, a CONFIDENTIAL document left unsecured over a three day weekend, poorly controlled access to a classified scientific conference at USAMSAA, and movement of the Ground Warfare Division of USAMSAA into a building in which no technical survey had been conducted prior to the move. These were brought to the attention of the appropriate security officials in the supported activities and corrective actions were taken.

e. Operational Status:

(1) On 1 Dec 75, the PLO presented the initial ICIP briefing to MG Patrick W. Powers, CDR, US Army Test and Evaluation Command (TECOM), and COL William H. Tucker, Jr., Chief of Staff, TECOM.

9. ~~(S)~~ LENTIL MONKEY: (OACSI Revalidation - 4 Feb 75)

a. Location: Defense Language Institute (DLI), Presidio of Monterey, CA.

b. Confidential Source Utilization: Five confidential sources.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) Two instructors of the Bulgarian Language Department who are man and wife, and who previously had been accused by other members of the Bulgarian Department of having contacts with the Bulgarian Intelligence Service have changed their status during the quarter. Details of their histories have been provided the Federal Bureau of Investigation. The husband has accepted a teaching position with the State Department and left DLI. The wife remained in DLI as an instructor.

(2) An instructor of the Czechoslovakian Language Department reportedly is planning to resign from DLI in 1976, take her retirement pay in a lump sum and return to Czechoslovakia with her two sons.

b1 Per FBI

There are no indications that he intends to return to Czechoslovakia. This information has been passed to the FBI.

(3) A DLI employee, presently involved with the Hebrew Project, is reported to be maintaining close contact with the Israeli Consulate in San Francisco. The employee, an alien with an impressive background, including possible intelligence activities, has also applied for employment with the National Security Agency (NSA). Information presently known to Army Intelligence has been made available to NSA.

e. Operational Status:

(1) Five confidential sources were utilized during the quarter; one source was terminated due to graduation. A total of 12 individuals are under assessment as possible new sources, including two Technical Language Assistants. In addition to the five confidential sources, there are 23 confidential sources providing coverage of nine language departments and the DLI staff.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 5 Mar 76

ACTION REQUIRED: To obtain appproval of the quarterly ICIP report

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) Background: On 8 February 1972, the Under Secretary of the Army requested that the VCSA provide a quarterly report on all ICIP operations.

2. (U) Discussion:

a. During the past quarter there were no significant changes in number of operations or activities within operations. Reports of questionable suitability and security hazards were passed to the supported commands.

b. Memorandum at TAB A transmits summaries of ICIP operations through the VCSA to the Under Secretary of the Army.

3. (U) Recommendation: That the Memorandum at TAB A be approved and signed by the ACSI.

3. ~~(C)~~ (U) CANTER RIDE: (OACSI Approval - 4 Mar 75)

a. Location: US Army Missile Command (USAMICOM), Redstone Arsenal, AL.

b. Confidential Source Utilization: One.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) Adverse suitability information pertaining to a civilian employee indicates that the employee is possibly the central figure who was the catalyst for events and allegations which led to the AR 15-6 investigation and initiation of this ICIP operation.

(2) Source continues his observations of employee who is a Jordanian by birth and concerning who information was furnished last quarter, but no new information of significance was developed.

(3) Source identified an Army 1LT who was attempting to civilianize his duty position. The individual is a naturalized citizen who was born in Shanghai, China. His security clearance was based on a favorable NAC only.

e. Operational Status: On 10 October 1975, the Commander, 902d MI Group and the Project Liaison Officer briefed MG George E. Turnmeyer, the newly assigned Commander, USAMICOM. MG Turnmeyer affirmed his approval of the operation. In a subsequent briefing on 10 November 1975, MG Turnmeyer was apprised of the information reported in sub-paragraph d(1) above. It was concluded that since the operation had provided the information initially sought, it is now necessary to refocus the effort to emphasize security matters rather than suitability problems.

CANTER RIDE (U)

3. d.

(1) Adverse suitability information pertaining to a civilian GS-12 employee, b6, GS-12, the Optical Guidance Technology Office (OGTO), indicated that he probably was the catalyst for the sexually oriented gatherings in OGTO which prompted a Sep 74 AR 15-6 investigation of OGTO personnel ordered by the CG, USAMICOM. As a result of that investigation, the present ICIP operation was initiated. The employee, apparently obsessed with sex, has had numerous extra-marital liaisons during the last five years. b6 transferred to the Infrared Technology Office, Advanced Sensors Directorate in Aug 74, but the Source, who obtained information by elicitation, was successful in identifying him only in recent weeks. b6 departure from OGTO apparently broke up the clique and Source could uncover no new evidence of such activities among remaining OGTO employees. Near the close of the reporting period, b6 applied for a position in Japan. The Commander, USAMICOM, was provided a summary of information on b6

5. (C) CENSUS TIME: (OACSI Revalidation - 4 Feb 75)

a. Location: Pentagon Telecommunications Center (PTC), US Army Communications Command (USACC), The Pentagon, Washington, DC.

b. Confidential Source Utilization: None.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) As a result of information gained concerning a suicide attempt by an Army NCO assigned to PTC a Limited Investigation was initiated. The investigation revealed that the NCO has a large number of outstanding debts, has lied on loan applications, and recently ordered a 1976 automobile which will cost in excess of five thousand dollars. Interviews concerning the NCO revealed alleged drug usage and homosexuality. USAINTA directed that the NCO be interviewed concerning the allegations against him. The NCO has been assigned to the Logistics Branch, PTC, pending results of the Limited Investigation.

(2) Adverse suitability information was reported on two additional NCOs assigned to PTC. Based on medical reports and rebellious attitudes one NCO was released from the Army by board action. The second NCO was reassigned to another Branch within the command and his access to classified information was suspended for 90 days pending resolution of adverse suitability information. C. *

e. Operational Status:

On 18 December 1975, the Project Liaison Officer (PLO), CENSUS TIME, presented the Quarterly Progress Briefing to COL Donald E. Clark, CDR, PTC. The PLO, CANARY EFFORT, was also present at the briefing. In a re-evaluation of the target priorities within PTC, COL Clark requested that the PTC element of the Army Operations Center and the Hoffman Telecommunications Center be covered by ICIP sources. Accordingly, the OPLAN for CENSUS TIME will be changed to include these targets.

a. Location: Aberdeen Proving Ground (APG), Aberdeen, MD.

b. Confidential Source Utilization: Eight.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) Sources reported several instances of foreign contact by military and DOD civilian personnel in the supported activity. In one instance a citizen of the Federal Republic of Germany was assigned on an exchange program to work in the US Army Human Engineering Laboratory (HEL) until Sep 76. The source, who provided information on an employee's travel to Poland and Czechoslovakia in 1975, provided additional information on the employee's plans to travel to those countries again in 1976. A report of a civilian DOD employee at Edgewood Arsenal with some unexplained periods of time in his background prompted a request for a Limited Investigation from the supported command.

(2) The source who reported on travel to the USSR in 1975 of a man and wife DOD employees of the supported activities at HEL and the US Army Materiel Systems Analysis Activity (USAMSAA) provided information on plans of the couple to take another tour to Russia in 1976.

(3) Sources reported eight allegations of questionable suitability factors involving employees assigned to the supported activity. Due to the lack of substantive information, the behavior of the individuals will be monitored.

(4) Sources reported five instances of security weaknesses or poor security practices. These were brought to the attention of the appropriate security officials in the supported activities for corrective action.

e. Operational Status:

(1) On 1 Dec 75, the PLO presented the initial ICIP briefing to MG Patrick W. Powers, CDR, US Army Test and Evaluation Command (TECOM), and COL William H. Tucker, Jr., Chief of Staff, TECOM.

(2) On 18 Dec 75, the PLO gave the Quarterly Progress Briefing to COL Kenneth L. Stahl, CDR, Edgewood Arsenal, on those activities pertaining to the Edgewood Arsenal portion of the ICIP GONDOLA STAR.

(3) On 19 Dec 75, the PLO presented a Quarterly Progress Report on those activities of the Aberdeen Proving Ground which are supported by the ICIP to COL Alvin D. Ungerleider, CDR, APG. Mr. Harry A. Mencke, Installation Intelligence Officer, APG, was also present at the briefing.

DEPARTMENT OF THE ARMY
HEADQUARTERS
U. S. ARMY INTELLIGENCE AGENCY
FORT MEADE, MARYLAND 20755

MIIA-SO-SA

JAN 13 1976

SUBJECT: Quarterly Reporting of Internal Counterintelligence Program (ICIP) Operations (U)

HQDA (DAMI-DOH/LTC HAENDIE)
WASH DC 20310

(U)

1. During the 2d Quarter, FY 1976, six of the currently active Internal Counterintelligence Program (ICIP) operations provided information on incidents involving suitability and conditions reflecting poor security practices, hazards, or weaknesses. These reports, though they involved individual items of a relatively minor nature, were passed immediately to the supported commanders who have taken corrective action. The discovery of these conditions and actions taken have served to enhance the security of the supported facilities. The total number of active ICIP operations at the close of the period was nine.

2. (U) Summaries reflecting the details of the information reported and the status of each of the nine operations are inclosed.

1. ~~(C)~~ CANARY EFFORT: (OACSI Revalidation - 4 Feb 75)

a. Location: Fort Ritchie, MD

b. Confidential Source Utilization: Three confidential sources.

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) During the reporting period adverse suitability information concerning 17 individuals assigned sensitive duties within the target areas was reported. The adverse information which involved indebtedness, alcohol abuse, drug abuse, moral improprieties, and mental instability, was brought to the attention of the ICIP Coordinator for CANARY EFFORT. Activities of all the individuals are being monitored, and the 7th Signal Command has requested a limited investigation of one of the individuals.

(2) During the period 13 military personnel assigned to Fort Ritchie were apprehended and charged with drug violations as a result of a drug investigation conducted by the US Army Criminal Investigation Division Command (USACIDC). Of the 13 individuals apprehended, 11 possessed security clearances and had access to the Alternate Joint Command Center (AJCC). Six of those apprehended were members of the 572d Military Police Company (Security) and performed sensitive duties at the AJCC. The Project Liaison Officer (PLO), CANARY EFFORT, had previously identified those individuals apprehended as alleged users of narcotics.

(3) The supported Command took action to suspend access to classified information of eight individuals based on information originally surfaced by the ICIP. These were all involved in suitability situations as outlined in d(1), above.

e. Operational Status:

(1) On 17 November 1975, a newly assigned Project Case Officer (PCO), a member of the GREAT SKILLS Program, began his duties in conjunction with CANARY EFFORT.

(2) On 9 December 1975, the PLO established a 902d MI Group Liaison Office at Fort Detrick, MD. This office will provide greater flexibility for the PLO in carrying out his duties in connection with the East Coast Telecommunications Directorate (ECTC), which is at Fort Detrick and is one of the activities supported by the ICIP.

(U) CANTER RIDE: (OACSI Approval - 4 Mar 75)

a. Location: US Army Missile Command (USAMICOM), Redstone Arsenal, AL

b. Confidential Source Utilization: One

c. Information Obtained or Reported on Non-Affiliated Civilians: None.

d. Useful Information Obtained:

(1) The source utilized in this operation has provided information of an adverse suitability nature on a civilian employee of the Optical Guidance Technology Office (OGTO), Advance Sensors Directorate (ASD), which indicate the employee is possibly the central figure who was the catalyst for the events and allegations during the Sep 74 AR 15-6 investigation which led to the initiation of the operation. This information has been provided the Commander, USAMICOM, in a Summary of Information. The CDR, USAMICOM, is considering what future action will be taken on the employee, if any. Evaluation of information provided on eight of the co-workers of the above employee indicates no further investigation with regards to their suitability is required at this time.

(2) The source is continuing his observation of the ASD employee who is a Jordanian by birth but learned no new information of significance during the period. Information on this individual was reported previously in the 1st Qtr, FY 76.

(3) Source identified an Army 1LT who was attempting to civilianize his duty position. The individual became of CI interest when it was learned that he is a naturalized citizen, born in Shanghai, China, with a security clearance granted on the basis of a favorable NAC only.

e. Operational Status:

(1) On 10 Oct 75, COL Stubblebine, CDR, 902d MI Group, accompanied by the PLO, MAJ Gipson, briefed the newly assigned CDR, USAMICOM, MG George E. Turnmeyer, on the operation with the USAMICOM Chief of Staff, COL Arthur G. Lange, Jr., in attendance. The USAMICOM officials were provided a copy of the EEI used in the operation and an update of the information provided by Source. MG Turnmeyer affirmed his approval of the operation.

(2) In a separate session on 10 Oct 75, COL Stubblebine briefed COL William P. Gojsza, Deputy Director, US Army Missile Research, Development and Experimental Laboratory (USAMRDEL), on Source's role in the operation since COL Gojsza is Source's immediate supervisor in Source's "part-time" cover duty as the USAMRDEL Administrative Officer.

Page 2269 of 3957

(3) On 10 Nov 75, COL Stubblebine and the PLO briefed MG Turnmeyer and Dr. McDaniel, Director, USAMRDEL, on an operational update and the 902d MI Group recommendations for continuation of the operation. After presenting the information contained in sub-paragraph d, above, conclusions were reached to the effect that since the operation had provided the information initially sought, it is now necessary to refocus the EEI, emphasizing security aspects rather than suitability matters. New EEI will be formulated with the supported command and the 902d MI Group.

No new sources have been recruited due to the Feb 76 departure of the PCO for an overseas assignment. No new PCO has been designated. A total of 12 individuals are under assessment as possible new sources, including two Technical Language Assistants. Formal recruitment is being delayed pending assignment of a new PCO. In addition to the five confidential sources, there are 23 conventional sources providing coverage of nine language departments and the DLI staff.

~~CONFIDENTIAL~~ SECRET

(2) The Commandant, DLI, has established a security briefing program for all incoming students as part of their initial orientation. The PLO participates in this briefing, giving a lecture which emphasizes the lack of security clearances and the need-to-know of the instructors, previous cases of security incidents at DLI, and examples of reportable security situations. Navy, Marine, Air Force, and civilian students attend these briefings as well as Army personnel. Two such briefings were given during the reporting period.

(3) On 5 Dec 75, MAJ Richard Erickson, DLI Security Officer, departed DLI for a new assignment. His replacement will arrive in mid-Feb 76. Mr. James Green, DLI Personnel Security Specialist, is acting Security Officer pending arrival of the designated Security Officer.

(4) The PLO presented the Quarterly Progress Report on 16 Dec 75 to COL Samuel L. Stapleton, Commandant, DLI. Also attending the briefing were COL William F. Strobridge, CDR, 525th MI Group; CPT Brendon A. Xiques, SAIC, Ft Ord Resident Office, 525th MI Group; and Mr. James Green, Acting Security Officer, DLI.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 20 February 1976

ACTION REQUIRED: To acquire ACSI approval of OPLAN for ICIP CARELESS TOKEN (U) by signature on approving correspondence.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) ~~(C)~~ BACKGROUND: (U)

a. (U) ~~(C)~~ From correspondence between USAINTA and DCSI, USAREUR, it was learned that the 66th MI Group was providing ICIP support to Detachment N, US Army Security Agency Field Station, Augsburg, FRG. The support had been requested by the Commander, USASA Field Station, Augsburg and approved by DCSI, USAREUR and the Commander, USASA, Arlington Hall, VA.

b. (U) In an exchange of messages with DCSI, USAREUR, DAMI-DOH advised the DCSI of the existing policy pertaining to ICIP's in CONUS and the requirement to furnish quarterly reports to the Under Secretary of the Army. In light of the ACSI's policy to personally review all new ICIP's, DCSI, USAREUR decided to forward the OPLAN for ICIP CARELESS TOKEN (U) for ACSI review. The operation is already ongoing and approved by appropriate USAREUR and USASA officials.

2. (U) ~~(C)~~ DISCUSSION: (U)

a. (U) ~~(C)~~ The OPLAN for ICIP CARELESS TOKEN (U) is designed to detect and counter vulnerability to espionage by USASA personnel assigned to an isolated USASA detachment in the vicinity of the FRG/CSSR border. Standard ICIP procedures have been employed using recruited sources, a Project Liaison Officer and a Project Control Officer.

b. (U) By separate action, a policy letter to all Army Intelligence commands will be prepared to assure that ICIP policy is established and reporting requirements to the Under Secretary are met.

USAREUR continuation of the ICIP inside

3. (U) RECOMMENDATION: That the 5th Indorsement approving the OPLAN at TAB A be signed by the ACSI.

(Continue on plain bond)

SUBJECT: Internal Counterintelligence Program (ICIP) (U)

Commander
US Army Security Agency
ATTN: DCSSEC
Arlington Hall Station
Arlington, Virginia 22212

1. (U) Reference IASEC Letter (S) 3 March 1975 w/control #75 IASEC 00123.

2. (U) Inclosure 1 contains introductory letter and plan for ICIP within this command and is forwarded per paragraph 4, reference above.

3. (C) This command acknowledges the requirement for a program such as is outlined in the plan attached and recommends approval by CG, USASA. It has long been a recognized fact that US forces in Europe operate within a hostile intelligence environment, this being particularly true for USASA with its sensitive product. Initiation of the attached ICIP would provide a valuable asset in upgrading this command's internal security posture. On the negative side, the short period of continued operations at Detachment N, where the plan is to be utilized, raises the question that the effort could be better expended at another detachment or at FSA.

4. (U) Request an expeditious reply in order to inform the 66th MI Group.

1. (U) MISSION.

a. Requirement: To collect significant counterintelligence information through the utilization of overt liaison contacts and Confidential Recruited Sources (CRS) assigned to Detachment N, US Army Security Agency Field Station Augsburg (USASAFSA), located at Rimbach (UQ4555), Federal Republic of Germany (FRG) (hereafter referred as the target), and who are specifically targetted against personnel security vulnerabilities of assigned target personnel and hostile intelligence activities directed against the target.

b. Objective: To provide responsible commanders and supervisors of US Army Security Agency Europe (USASAE) a concentrated program designed to detect, eliminate or neutralize:

(1) Espionage, sabotage, subversion or deliberate security violations against the target or the personnel assigned thereto.

(2) Disloyalty, disaffection and security weaknesses prevalent among personnel assigned to the target.

(3) Individuals in sensitive positions who, by character weaknesses or personal conduct, render themselves vulnerable to coercion or blackmail by a Hostile Intelligence Service (HoIS), either in their present assignment or at a later date. The foregoing includes drug and alcohol abuse.

c. Base of Operations: Headquarters, 511th Military Intelligence Battalion, Fuerth (PW4402), FRG.

2. PERSONNEL.

a. Source Personnel: Not yet selected. Spotting and assessing has commenced, however, no selections will be made prior to approval of this Plan.

(1) MOS: A minimum of two USASAMSA personnel, assigned to the target and meeting most of the following criteria, will be required:

(a) Male, between the ages of 21 and 35 years

(b) Unmarried (or "geographical bachelor")

(c) Have own Privately Owned Vehicle (POV) or the intent and independent means to purchase one shortly

(d) Have a desire and agree to a regular pattern of travelling away from the immediate target area during extended breaks from duty

(e) Friendly and likeable disposition, and ability to make friends, and to relate to and enjoy the confidences of co-workers

(f) Trustworthy, reliable and discreet

(g) Ability to take directions

(h) Willing to consume alcoholic beverages without habitually becoming intoxicated

(i) No record of derogatory information, to include character deficiencies

REGRADED UNCLASSIFIED
ON SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

CONFIDENTIAL

(j) Reasonable amount of intelligence and a high degree of common sense

(k) Above average sense of loyalty to duty and country and a strong dedication to duty assignment

(l) Career-oriented, or not yet decided whether to remain in the Army

(m) DEROS not earlier than one year from recruitment as a CRS

(2) Support Sources: It is not anticipated that any support sources will be required in this operation. If the operation develops to a degree of complexity requiring support sources, this Plan will be revised accordingly.

b. US Army Intelligence (USAI) Personnel:

(1) Project Liaison Officer (PLO):

(a) The PLO will be responsible for Overt Liaison Contacts and the spotting and assessing of potential CRS at the target. A Special Agent assigned to Resident Office Regensburg (ROR), 511th MI Battalion, will function as PLO consistent with ROR having area responsibility for the target area and liaison responsibility to the target.

(b) Designee: S/A Ronald Crawford, who has experience in both counterintelligence and collection activities, to include source handling; his DEROS is 1976.

(2) Project Control Officer (PCO):

(a) The PCO will be responsible for the recruitment and controlling of CRS engaged in this operation. The PCO will be assisted by an Assistant PCO as required.

(b) Designee: PCO - S/A John W. Carpenter, CE Section, 511th MI Battalion, who is an experienced counterintelligence operative with prior source handling duties. His DEROS is October 1975. A qualified replacement as PCO will be selected well in advance.

(3) Additional Special Agents assigned to the 511th MI Battalion, or other elements of the 66th MI Group, may from time to time be required during the tenure of this operation for the assessment and/or recruitment of selected CRS.

Operations Plan, BO3130-079-75

(4) Supervision for the conduct and operating control of this operation within the 511th MI Battalion will be vested in the Chief, Counterespionage (CE) Section. Designee: S/A Donald A. Foss, Chief, CE Section, will also be the 511th MI Battalion's designated representative for any coordination with Commander, USASAFSA, Augsburg (PC4060), FRG, as may be needed.

(5) Broad Battalion operational monitorship control and policy guidance are vested in the Battalion Operations Officer/Assistant Operations Officer.

(6) The Director of Operations, Headquarters, 66th MI Group, will be responsible for the operational control of this ICIP, will coordinate all ICIP activities with the ICIP Control Officer, ODCSI, USAREUR, and with the Commander, USASAFSA, and will levy requirements on other subordinate counterintelligence (CI) elements of the 66th MI Group regarding this operation as may be appropriate. The ICIP Control Officer, Headquarters, 66th MI Group, will be Mr. Earl L. Kirk, Section Chief, CE Branch, Director of Operations.

4 (U) ~~(C)~~ EXECUTION:

a. Background:

(1) The geographic location, isolation and highly sensitive mission of the target make it of logical interest to HoIS, particularly the CSSR Intelligence Service (CIS). Some magnitude of this threat is revealed in recent activities involving former ASA personnel travelling to the CSSR shortly after release from active duty, the association of target personnel with Czech nationals residing in the target area, and the presence of semi-official Czech representatives, e.g., Skoda automobile firm, in the target area.

(2) Past investigations and counterintelligence special operations concerning the target and assigned personnel have resulted in the conclusion that the very nature of the target, through its remote location, and its assigned personnel, who frequently keep to themselves during off-duty hours, requires a member of the target unit itself to answer the EEI covered by this Plan. There are no other US installations in the vicinity, and all target personnel live on the economy or in leased Government quarters, and frequent local public establishments and associate with local residents to a predominate degree. Many residents of the target area have family or ethnic ties with residents of the CSSR and there is considerable legal travel across the border in the target area, both by FRG and CSSR residents. Shift work at the target provides for periodic long breaks by assigned personnel between shifts, and their activities and whereabouts during these break periods are virtually impossible to ascertain and are practically unknown to the target facility commander.

(3) HoIS are known to collect data, including personalia, character traits, weaknesses and possible motivating points on USASA personnel wherever they can be located for possible use at a later date when the individual may be assigned to a location or headquarters facility affording a high degree of access to sensitive information.

(4) Headquarters, USASA, Arlington Hall, Virginia has expressed amenability to use of ASA personnel by elements of the 66th MI Group for purposes of counterintelligence support to USASAE.

Page 2288 of 3957

~~CONFIDENTIAL~~

(5) Reference c provided information concerning the scheduled automation of the target and the subsequent withdrawal of all but five to ten maintenance personnel and security guards. The construction and equipment installation was originally scheduled to be completed and the automated site operational by 1 July 1975, with a possible additional delay of 60 days beyond that date.

b. Concept:

(1) The cultivation and use of overt liaison contacts and the spotting, assessing and recruiting of non-ASA assigned personnel in the target area will continue in effect and be expanded as necessary and require no prior approval under this Plan. Recruitment and utilization of any ASA-assigned personnel as CRS will be initiated on approval of this Plan. No CRS will be recruited under this Plan prior to the completion of appropriate name traces, to include the USAIRR.

(2) Two separate and distinct methods of spotting, assessing and recruiting of CRS will be employed simultaneously, as follows:

(a) The PLO will spot and assess potential sources assigned to the target during visits to the target described in paragraph 3a(2), above. The PLO will pass potential lead information to the PCO, and will continue to furnish any additional available information concerning the individual or his status, as determined. Appropriate name traces and agency checks will be conducted on target members prior to contact by the PLO. Additional checks deemed desirable on target personnel by the PLO will be initiated by the PLO. The PCO will prepare LDR on each potential CRS and on approval will arrange to meet the potential source away from the target area, using an appropriate guise, for further assessment and possible recruitment. All subsequent meetings between the [illegible] and the PCO will be conducted under secure, covert conditions and will be away from the target area.

(b) Coordination with and arrangement for S-2, USASAFSA, assistance in screening records of newly arrived personnel scheduled for assignment to the target, in order to identify those individuals of possible interest; to have selected individuals available for assessment by representatives of the 511th MI Battalion or other elements of the66th MI Group, prior to their assignment to the target; and to assist in necessary personnel actions to delay or reassign selected individuals in order that source coverage of the target can be effected. It time permits, sources recruited in this manner prior to actual arrival at the target will be given initial training and briefing concerning security implications, and arrange for bonafides and meeting arrangements with the PCO at a later date.

Operations Plan, DO3130-079-75

c. CRS Activities in the Target Area: CRS will perform their normal military duties while covertly and discreetly attempting to answer the following EEI, both from on-duty contacts and experience and from off-duty associates:

(1) Identification of target personnel who closely and continuously associate with foreign nationals having connection with Communist countries of the world.

(2) Identification of target personnel who perform authorized or unauthorized travel to Communist countries of the world, including those who may travel after they are released from active duty.

(3) Detection of disaffected target personnel.

(4) Detection of target personnel whose activities and/or character weaknesses render them vulnerable to blackmail or HoIS exploitation.

(5) Detection of target personnel whose activities are indicative of potential defection or desertion.

(6) Detection of personnel who have memberships in or associates with members of organizations, clubs, groups or activities which pose actual or potential threats to the security of the target activity.

d. Security Considerations:

(1) Individuals who are approached for recruitment who decline to function as CRS will be asked to sign security statements which clearly state that it is unlawful to make any unauthorized disclosure concerning the recruitment approach or the activity under this Plan.

(2) Individuals who are approached for recruitment prior to their arrival at the target, and who decline to function as CRS, will be considered for assignment to some location other than the target, if circumstances and military priorities permit.

(3) No CRS nor potential CRS will be made aware of the source relationship with any other individual in this operation.

(4) All CRS will be met under covert conditions, away from the target area; under conditions that will provide maximum security against inadvertent disclosure of the source relationship.

(5) Separate and plausible cover stories for status and for action will be prepared with each CRS to provide a logical reason for regular meetings between CRS and the PCO.

REGRADED UNCLASSIFIED
ON SEP -5 1997
BY CDR USAINSCOM FOI/PO
AUTH PARA 1-603 DoD 5200.1-R

Page 2290 of 3957

(6) Each CRS will be provided sufficient training in security and meeting arrangements so as to minimize possibilities of compromise of the source relationship.

(7) In the event of compromise of a CRS and/or the nature of this operation, termination of the source will follow under such conditions ns are warranted by the circumstances of the compromise. In the event of a compromise, denial of USAI involvement will be achieved where plausible.

(8) Under no circumstances will the command element at the target activity be made aware of the existence of this operation or of the source relationship between any CRS and the PCO.

(9) Local National Investigators (LNI) employed by the 66th MI Group will not be made aware of the existence of this Plan, nor of the source relationship with any CRS.

(10) Knowledgeability of this Plan, to include the identity of the target, will be kept to a strict minimum, and only those individuals with a strict "need to know" will be made cognizant. A knowledgeability roster of all persons with knowledge of this operation will be maintained.

(11) Under no circumstances will the PLO reveal USAI recruitment interest to any target personnel, nor will he offer any recruitment assistance to any prospective CRS.

e. Production:

(1) The Commander, USASAFS Augsburg will be informed of all credible information developed within the target, except as indicated in (2) and (3), below.

(2) Suitability information will be evaluated in light of the tenor of information and the status of the individual to whom it pertains, and if considered of major importance or of significance to this operation, will be forwarded by Agent Report to the Commander, 66th MI Group, ATTN: AEUMI-T-CE.

(3) Information pertaining to or identifying overt or covert sources will not normally be passed as individual items to the supported command without specific DCSI USAREUR approval.

(4) Commander, 511th MI Battalion will submit to the Commander, 66th MI Group, ATTN: AEUMI-T-CE, a Quarterly Status Report containing a summary of the operational progress and source activity covered in this Plan.

DAMI-DOH

Internal Counterintelligence Program (ICIP) (U)

20 February 1976

1. (U) Purpose: To acquire ACSI approval of OPLAN for ICIP CARELESS TOKEN (U) by signature on approving correspondence.

2. (U) Facts Bearing on the Case: (U)

a. (C) From correspondence between USAINTA and DCSI, USAREUR, it was learned that the 66th MI Group was providing ICIP support to Detachment N, US Army Security Agency Field Station, Augsburg, FRG. The support had been requested by the Commander, USASA Field Station, Augsburg and approved by DCSI, USAREUR and the Commander, USASA, Arlington Hall, VA.

b. (U) In an exchange of messages with DCSI, USAREUR, DAMI-DOH advised the DCSI of the existing policy pertaining to ICIP's in CONUS and the requirement to furnish quarterly reports to the Under Secretary of the Army. In light of the ACSI's policy to personally review all new ICIP's, DCSI, USAREUR decided to forward the OPLAN for ICIP CARELESS TOKEN (U) for ACSI review. The operation is already ongoing and approved by appropriate USAREUR and USASA officials.

2. (U) DISCUSSION: (U)

a. (C) The OPLAN for ICIP CARELESS TOKEN (U) is designed to detect and counter vulnerability to espionage by USASA personnel assigned to an isolated USASA detachment in the vicinity of the FRG/CSSR border. Standard ICIP procedures have been employed using recruited sources, a Project Liaison Officer and a Project Control Officer.

b. (U) By separate action, a policy letter to all Army Intelligence commands will be prepared to assure that ICIP policy is established and reporting requirements to the Under Secretary are met.

3. (U) RECOMMENDATION: That the 5th Indorsement approving the OPLAN at TAB A be signed by the ACSI.

2. (U) This is the first ICIP Quarterly Status Report, in accordance with references, covering the period ending 15 October 1975.

3. General:

a. Activity at the target is in the drawdown stage, pending automation in early 1976 under the LA FAIRE VITE Program. Since 1 July 1975, personnel manning has been reduced to about 50 percent of previous target strength; most personnel have been reassigned to USASAFS Augsburg. In June 1975, an official release was made by letter to the Buergermeister (mayor) of Rimbach, which provided details of the withdrawal. Portions of the letter were reportedly published in area newspapers. A copy of the English translation of the letter to the mayor's office is attached as Inclosure 1.

b. Contrary to the letter inclosure, it appears that some target personnel in excess of the programmed approximately seven (7) individuals who will maintain and guard the automated site, may remain in the area for varying periods up to 1 July 1976. These include all personnel who

AEUMI-N-CE 24 October 1975
SUBJECT: Internal Counterintelligence Program (ICIP)

are scheduled for DEROS or ETS in FY76 as funding is not available for two PCS moves in a single fiscal year. No figures were available at the time of the QSR preparation as to how many personnel would be affected, nor had it been determined what would be their duties during the approximate period 1 March-30 June 1976.

c. The USAF communications site (6913th USAF Security Squadron) located in the same area is scheduled to close at about the same time the target is automated; no USAF personnel will remain in the area. As far as can be determined, the French and Bundeswehr sites will continue to operate.

d. The seven or eight personnel scheduled to remain at the target permanently will be billeted at the top of Mount Hoherbogen, in a newly constructed building, adjacent to the present operational area. The senior individual will be an NCO, grade E6 or E7, who will probably have one of the supervisory communications equipment maintenance MOS's. Other personnel stationed there will be equipment and antenna array repair and maintenance specialists and guards. All personnel will be single or unaccompanied. At the writing of this report, none of the permanent party had been selected.

4. Operational Matters:

a. SMLM-F makes a reconnaissance of the Rimbach area approximately once a month. The sightings usually involve travel along the PRA perimeter roading leading north and south out of Rimbach. Perimeter roads of PRAs, excluding Autobahnen, are off limits to SMLM-F vehicles. On 3 June 1974, a SMLM-F vehicle was disabled on the access road leading to the target operational site, well within a PRA, and was assisted by a Chief Warrant Officer assigned to the target, who was not aware of the correct PRA boundary. There have been no SMLM-F detentions in the area, and none are likely, since the closest Military Police are located at Hohenfels Training Area (HTA), 80 kilometers away.

b. In March 1975, during a liaison visit with MAJ Richard Douma, the target commander, the PLO was advised that b6 b6 had been transferred to Ramstein, FRG after appearing before a board to face charges of homosexuality.

c. In April 1975, SP4 b6 reported a possible SAEDA incident (Group Case 75-061P); during the subsequent investigation it was determined she had reported to Field Office Augsburg a similar approach by the same individual a year earlier. Target personnel were dubious as to the veracity of statements made by b6 who was transferred to USASAFS, Augsburg on 1 August 1975.

~~CONFIDENTIAL~~

[redacted]

AEUMI-N-CE 24 October 1975
SUBJECT: Internal Counterintelligence Program (ICIP)

d. In May 1975, MAJ Douma advised the PLO that some of the target personnel had a tendency to talk too openly about their jobs in public, and that his solution had been constant reiteration to unit personnel on the dangers of loose talk. No specifics were provided on individuals concerned. The PLO did not press for details as he considered it a command matter. MAJ Douma believed the security posture of the target was steadily improving.

e. The preliminary investigation of b6 continued, however, in low key due to the lack of credible specific allegations. b6 operates the Hoherbogen Restaurant, situated near the target administrative area. He allegedly travels regularly to CSSR to visit relatives and to attend dog shows. Target personnel patronize the restaurant regularly, primarily because of its convenient location. b6 was never reliably reported to have shown undue curiosity about target operations and personalities, but remains, nevertheless, well-informed because of overheard conversations of target personnel-customers. In June 1975, b6 told the PLO he was not looking forward to the departure of the Americans because he would have to "put up" with local German customers, who were much more troublesome than target personnel. In October 1975, b6 remarked to MAJ Douma that he had made several trips to Augsburg to negotiate the purchase of a tavern there. b6 said he intended to sell the Hoherbogen Restaurant and move to Augsburg, where he will open a tavern/restaurant two kilometers from the "ASA kaserne." Activity of b6 will continue to be monitored in the Rimbach area, and if he moves to Augsburg, he should be made a target of continuing interest by Field Office Augsburg.

f. In July 1975, CPT (Chap) b6 Protestant Chaplain at HTA, advised that an individual assigned to the target had sought his spiritual guidance as a result of extreme emotional anxiety, due to his/her involvement with a group of USASA personnel who were engaged in satanic religious practices at the target. b6 revealed no details nor identities, due to the sensitivity of communications to a chaplain, however, the identity of the individual involved is believed to have been established (see para 4j, below).

g. In July 1975, two target personnel applied for Military Intelligence duties in ACGP-97. One (SP5 b6) was assisted in completion of required forms and processing/interview is in progress. The other individual (SP4 b6) will not be able to apply until December 1975, when he has 12 months remaining to DEROS. He expects to be transferred to USASAFS, Augsburg prior to that time and has been advised to initiate his processing at Field Office Augsburg.

[redacted]

[redacted]

AEUMI-N-CE 24 October 1975
SUBJECT: Internal Counterintelligence Program (ICIP)

h. In July 1975, USASAFS, Augsburg requested agency checks on the German national intended spouse and relatives of SP4 b6 Subsequently, during a subject interview, b6 stated that his fiancee had contact, through an acquaintance, with b6 a photographer/ reporter for a Furth-im-Wald newspaper and that he suspected b6 was receiving money from the CSSR for photographs of facilities in the Rimbach area. b6 had no specific reason to back up his suspicion and said it was common knowledge among target personnel. b6 was the subject of a bilateral MI/MAD investigation in 1973 and 1974, during which none of the allegations of possible intelligence activity were substantiated.) b6 also said he personally was suspicious of fnu b6 a former member of the target unit, who operates "b6 Club" in Koetzting. b6 is curious as to the status of US installations at Rimbach and uses his US citizenship and former Army service as a method of gaining access to information from US Forces members who patronize his establishment. b6 and his activity was previously known to MI/MAD during the b6 investigation and not determined to warrant further investigation. b6 is a non-DoD affiliated US citizen.)

i. In July 1975, USASAE, Augsburg requested agency checks in Koetzting on b6 and b6, who were friendly with target personnel and who had become knowledgeable of classified defense information as a result of this relationship. There was no indication any of the b6 had attempted to elicit defense information. Agency checks failed to reveal any derogatory information concerning the b6 family; b6 was a practicing dentist in Koetzting. In early August 1975, MAJ Douma advised the PLO that in early 1975, SP4 b6 and her dependent husband, b6 a US citizen, had attempted to establish a German-American Club between target personnel and the local communities. In this connection, the b6 mentioned being acquainted with a dentist in Koetzting, nfi. Nothing of consequence ever came of the attempt to form an organization. Later, date unknown, Douma was advised by Commander, Forward Operations Battalion, Augsburg (his supervisor) of a report that b6 had discussed classified information with German acquaintances. In an interview of b6 by Douma, she admitted having discussed details of LA FAIRE VITE with her husband in early 1975, and to have mentioned the project in the presence of one b6 a German national acquaintance residing in Munich. b6 was subsequently given a written reprimand in connection with the compromise. b6 mentioned nothing about any other German acquaintances, and denied compromising any classified information to any other foreign nationals. No information was made available to Douma when he was tasked by his higher headquarters to investigate the incident, as to the identity of the German acquaintances who were supposed to have received the classified defense information. b6 departed the target on 19 July 1975 for CONUS and separation from active duty.

~~CONFIDENTIAL~~

AEUMI-N-CE 24 October 1975
SUBJECT: Internal Counterintelligence Program (ICIP)

j. In August 1975, MAJ Douma advised the PLO that SP4 b6 attached to the target from the 502d ASA Group as a Czech linguist Voice Intercept Specialist (98G2LCX), had exhibited severe mental trauma immediately following the departure of a close female acquaintance from the target on 30 June 1975, and had been placed on extended leave status. b6 consulted CPT (Chap) b6 at HTA and the USASAFS Augsburg staff chaplain, but had allegedly declined psychiatric counselling. On her return from leave, her access to classified material was to be suspended and Douma could direct b6 to receive counselling, as he was very concerned about her emotional stability. b6 had a DEROS of September 1975.

k. In August 1975, the PLO advised MAJ Douma that a German agency had reported a US soldier named b6 was trafficking in drugs in Koetzting. After the PLO provided descriptive data obtained from a FRG agency, Douma identified b6 as SP4 b6 a Russian-linguist Voice Intercept Specialist, attached from the 502d ASA Group. Douma was requested to watch b6 activities closely and pass any information to CID at HTA. b6 DEROS is June 1976, putting him in the category of those mentioned in paragraph 3b, above, who may remain at the target without any specific duties.

l. In September 1975, B58,786 (who is undergoing preliminary source assessment) advised that in approximately April 1975, a female soldier traffic analyst assigned to the target, whose name he could not recall, had compromised a TOP SECRET/CRITIC/CODEWORD message to b6, a dependent and GS-2 clerk typist in the unit administrative office. b6 had only a Confidential clearance. The compromise although known by the target commander, was not reported to USASAFS, Augsburg.

m. No specific information has been reported to indicate that Hostile Intelligence agencies are in contact with any target personnel.

5. (U) Source Activity:

a. One potential source (B58,786), has been spotted at the target and is being assessed. Name traces are not yet complete. He is scheduled for reassignment to USASAFS, Augsburg on approximately 15 December 1975. In accordance with paragraph 3b of reference a, a Lead Development Report is being prepared and will be forwarded separately, recommending his possible utilization as a defensive installation source in Augsburg.

b. The lack of identification of any personnel who will make up the permanent party at the target has inhibited any meaningful spotting/assessing activity to date.

~~CONFIDENTIAL~~

AEUMI-N-CE 24 October 1975
SUBJECT: Internal Counterintelligence Program (ICIP)

6. (C) Comments:

a. The PLO was indoctrinated for SI on 9 October 1975. Request Special Operations Detachment determine if any more Quarterly Security Inspections are scheduled for target, and arrange for prior notification and coordination so that the PLO may accompany the inspecting team. Any insight gained into security problem areas not evident from routine liaison contacts would be of great value to the PLO in accomplishment of his mission.

b. The PLO has reported that he is unable to pursue a more aggressive approach with the target commander concerning identities of personnel who will remain at the target, without arousing suspicion as to his true motives. Request Special Operations Detachment attempt to identify those individuals as soon as the determination is made.

c. The short period remaining of continued operations at the target raises the question as to whether the project would be justified at that location in the long term. As presently visualized, according to available information, any source recruited at the target would be primarily reporting on six or seven other personnel, with whom he is living in a very close, restrictive environment. It can be expected the majority of the information reported will be of an adverse suitability nature. Further, it can be expected that with target automation, Hostile Intelligence efforts at the target will take a lower priority inasmuch as product expolitation through the human exploitable factor will no longer be present. The Commander, USASAFS, Augsburg raised some of these points when reference a was staffed through his office.

DEPARTMENT OF THE ARMY
SEVENTH ARMY TRAINING CENTER MILITARY COMMUNITY
OFFICE OF THE INSTALLATION COORDINATOR, RIMBACH
APO New York 09173

IAEaCF-B

5 June 1975

Herr Burgermeister Bachl
Community of Rimbach

1. The purpose of this letter is to advise you, and therefore all Rimbach community officials and businessmen, of a projected change in the US military posture and presence in the community of Rimbach, Mount Hoherbogen, and the surrounding area.

2. The American military community in this area now consists of elements of both the United States Army and the United States Air Force, as well as a significant number of wives and dependent children. The total American population currently is just over three hundred people.

3. Commencing in August 1975, the American community will decrease in size, with the largest majority of our people departing on or about 1 November and 15 December respectively. By 1 March 1976 there will be approximately seven US Army personnel and probably no wives and children remaining in the area. They will live in a US Army owned facility on top of Mount Hoherbogen (on Eckstein Ridge).

4. This transformation is the result of a programmed technical change in the American communications function located in this area.

5. At this time, and with this announcement, please accept my personal gratitude, as well as that of the US Army and the US Air Force, for the understanding and warmth which has been so graciously extended to the American military forces and their families over these many years by you, the Rimbach Community Official Staff, and the entire community of Rimbach. We will do all that we can to insure that the small force remaining continues to appreciate and help maintain the relationship that we have enjoyed.

RICHARD DOUMA
MAJ, MI
Installation Coordinator

b. AEAGB-CI(SO), DTG 151640Z Jul 75, ICIP.

c. AEUMI-N-CE, B03130-518-75, 24 October 1975, ICIP.

2. (U) This Quarterly Status Report is submitted in accordance with references a and b and covers the period ending 15 January 1976.

3. (U)~~(C)~~ General:

a. Operational activity continues in the drawdown stage, on schedule. The transfer of the first increment of Company B and attached operational personnel to USASAFS Augsburg (USASAFSA) has been completed, reducing the strength on 15 January 1976 to 63 assigned, 22 attached, 3 TDY and 20 dependent wives and children. In addition, 22 personnel will depart the target during January and an additional 34 will depart by mid-February. All Company B personnel will have departed by 31 March. During the latter part of February and March 1976, Company B personnel will shut down the present operations, service and prepare equipment for shipment and perform general repair and utility duties relating to present operations. Action by USASAFSA to move all Company B personnel when essential duties are completed has alleviated a potential problem of having sensitive personnel remaining in the area with much free time. The final day of operation of the snack bar was to be 17 January, and the small PX and commissary annexes are to close by mid-February. With these closures, the closest shopping facilities are in Regensburg, Hohenfels and Grafenwoehr.

b. Due to the shortage of PCS funds and DA reassignment restrictions, USASAFSA offered curtailment or extension options to those personnel scheduled for discharge or separation prior to 31 March 1976. Many chose curtailment, and some of those requested European separations. Identities of those to be separated in USAREUR have not been determined, pending approval of the requests.

c. Eight dismounted vans remain at the target and the Seventh Army Training Center (SATC) Engineer Office, Grafenwoehr (QA0911) has announced bids for their removal or destruction. The vans represent a total present value of $40,000 to the US Government and Property Disposal officials are reluctant to destroy the vans as they have a high resale value in Europe. It is expected that in the near future a contractor will have personnel at the target, either removing or dismantling the vans.

d. All of the LA FAIRE VITE (LFV) personnel have arrived at the target. The NCOIC is SFC [b6] All team members are assigned to the Supply and Maintenance Company (SMC), Support Battalion, USASAFSA. [b6] is a Cryptographic Equipment Repair Supervisor (MOS 32G), has over 13 years service with USASA, is married (no children) and resides with his wife, [b6] nee: [b6] US citizen, at [b6] [b6] is 35 years old, a native of Colorado and expects to remain at the target until his normal DEROS in November 1978. [b6] mother is a naturalized US citizen, born in Germany; her father is employed as a Systems Engineer at American Forces Network (AFN), Frankfurt (MA7749). [b6] appears to be highly proficient and has exhibited a positive attitude toward his assignment. PLO contacts to date have indicated Helus will be cooperative and receptive to MI support and contact. On the most recent visit to the target (15 January 1976), [b6] was reportedly on TDY attending an unidentified training course at USASAFSA. He is scheduled to return to the target by mid-February 1976.

e. Other members of the LFV team are identified as follows:

(1) SP5 Terry P. Pack, [b6] DEROS February 1978

(2) SP5 [b6] DEROS/ETS April 1978

(3) SP4 [b6] DEROS/ETS February 1977

(4) SP4 [b6] DEROS/ETS April 1978

(5) SP4 [b6] DEROS/ETS April 1978

(6) SP4 [b6]

23 January 1976

f. The team began on-site training on 13 December 1975. All of the personnel in paragraph 3e above, are Intercept Receiving System Repairmen (MOS 33C) or Intercept Recording System Repairmen (MOS 33D). All are single or unaccompanied; none admitted to having any girl friends living in the target area, or any that they intended to have move into the area. In general, the LFV team members appear to be security conscious. They have been at the target long enough to become familiar with some of the USASA "haunts" (Hoherbogen Restaurant in Rimbach (UQ4553) and the Ratskeller and Ambergerhof Restaurants in Furth-im-Wald (UQ4364)), and have been eager to acquire information on places of intelligence interest or with a bad reputation.

g. The target has a German shepard dog, "Sam" which is partially attack-trained and does not react well to strangers, females and blond males (SP5 Pack has particular difficulty in getting close to the dog). "Sam" reportedly was beaten and generally mistreated by previous owners, and his attack training has given him just enough knowledge to be dangerous.

h. Electrical power at the target will continue to be provided by the Pilsen Power Grid. Once activated, the site will have a 22 Kilovolt self-regulating generator with a 14-day gasoline supply for backup/emergency use. Water must be trucked to the site and sewage removed from a holding tank. Both water and sewage tanks are planned for 14-day capacity. A German firm, as yet unidentified, from Brueck (UQ0458) has contracted to service the holding tank and to truck in water from the Rimbach public water works. Emergency fire service will be provided by the Neukirchen-Heilig Blut (UQ5258) Volunteer Fire Department, 15 kilometers away, with an unknown reaction time. Medical assistance will be provided by the German civilian hospital in Koetzting (UQ4349); air evacuation by helicopter is possible through the MEDIVAC capability at SATC, Grafenwoehr. APO mail will be addressed to Post Office boxes at USASAFSA, will be re-packaged and sent through German mail channels to: Remote Site LFV, SFC [b6] 8491 Rimbach. [b6] will pick up mail daily from the Rimbach post office.

i. The site will have three communications channels:

(1) Direct AUTOSEVOCOM to USASAFSA Control Center

(2) Non-Secure "order wire" to USASAFSA Control Center

(3) German commercial phone (Class B) (09947-302) through the Neukirchen-Heilig Blut exchange.

23 January 1976

j. Target personnel will live in the "Chateau" located adjacent to the Operations Building. The newly constructed "Chateau" consists of a common area: living room, kitchen and recreation facilities, with couches, television, stereo and a pool table; and adjacent sleeping quarters. Personnel will be allowed guests in the common area. The Commander, SMC has advised b6 he may hire a local cook if the team members agree. b6 would like to hire his wife for this activity, as she will otherwise be unemployed. This solution appears to have a distinct advantage over hiring a local area national.

k. Two team members will be on duty at the site, 24 hours a day. Present plans call for the issue of .45 caliber pistols and ammunition, but it has not yet been determined where the weapons and ammunition will be stored. In the event of attempted penetrations of the area, personnel have been instructed to lock all entrances and remain inside the building. b6 has been advised that elements of the 3d Squadron, 2d Armored Cavalry Regiment (2ACR) at Camp May, Regen (UQ6326), 43 kilometers, may have a reaction capability, reaction time unknown. 2ACR elements patrol the CSSR border area near the site and may be capable of a short reaction time. Joint defense plans have been discussed with two other military units in the same immediate area, Fernmeldesektor F of the FRG Armed Forces and Detachment D of the French Forces. Both counterparts appeared eager to form joint defense plans, but the non-NATO status of the French precluded USASA from negotiating at the local level. The problem reportedly was identified to USASAFSA. Each member of the team will have one key to the entrance gate which will be kept locked at all times after the German contractor personnel have departed the site. The operations building, a SI-area, is equipped with heat and sound-sensitive alarm systems and alarms also sound in the event of power loss or equipment malfunction. The German contractor engaged in construction work at the site will remove approximately 1.5 meters of rock from the end of the ridge near the tower to enlarge the antenna scanning area. This work cannot be completed during the winter months and is expected to be finished by May 1976. Explosives cannot be used due to the sensitivity of installed equipment in the immediate area.

l. On 15 January 1976, the PLO met the LFV Project Officer from the USASA Systems Agency, Vint Hill Farms, Warrenton, Virginia, who was visiting the target. He explained that the following relay towers in the LFV system are unmanned by USASA personnel:

Seibersdorf	TQ97624600
Landshut	TP94688240
Bonstetten	PU26906739
Dachau	PU80735466
Wasserkuppe*	NA66489456
Wildflecken*	NA56258478
Brandhof**	PV26258873

SUBJECT: CARELESS TOKEN (U)

Heidenheim**	PV28953095
Schwanberg**	NA91890879

*Army location occupied by non-USASA personnel

** USAF installation

The present SOP gives little information on the remote towers as far as security is concerned. In general, the remote towers are tall antennas with small buildings at the base. Each building has a door that is supposed to be kept locked. If someone enters one of the buildings an alarm light goes on in the central control area at USASAFSA. Telephones with open speakers are located in each building, so that if the alarm lights go on in the central area, duty personnel can pick up a phone and ask who is there. Arrangements have reportedly been made with local police, details unknown, to keep a close watch on all the remote towers, but the Project Officer was unaware what action the police were to take concerning trespassers. Anyone gaining access to the building at a remote tower could, with the proper equipment, tap the open service line and the scrambled traffic lines. While tapping the traffic lines would yield nothing but meaningless letter/number groups, they might have some value to a Hostile Intelligence Service. The isolation of several of the remote towers makes them susceptible to sabotage as the loss of a tower in the relay system renders that segment of the system useless.

4. (C) Operational Matters:

a. Reference paragraph 3j, above: USASA has not planned any electronic sweep of the SI area or the common room now that the German contractor has completed installation of the wiring. b6 asked if the PLO could arrange for an electronic sweep of the entire area as future visitors may want to use the common area for conferences. The PLO was non-committal and no action will be taken unless a formal request is received.

b. Reference paragraph 4g of reference c: On 8 December 1975, the First Sergeant of Company B advised that SP5 b6 was no longer interested in ACGP-97 duties and that his application papers should be destroyed. SP4 b6 the other individual interested in ACGP-97 will remain at the target until February 1976 and his application is being processed with PLO assistance.

c. Reference paragraph 4e, reference c: b6 is moving to Augsburg on about 1 February 1976 and will be operating the Cafe-Restaurant "Sonne", 9 Hauptstrasse, Augsburg-Bergheim (PU3554), telephone: 97524. b6 has passed out the name and address of his new establishment to target

SUBJECT: CARELESS TOKEN (U)

personnel who are moving to Augsburg, and he has been actively soliciting their future patronage. There have been no indications that b6 has attempted to elicit information from target personnel, however his proximity to the target and the regular customers from the target at his establishment, the Hoherbogen Restaurant, have resulted in him being well-informed about ongoing transfers, the drawdown and future operations in the target area. All members of the LFV team are aware of MI interest in b6 It is expected that the Hoherbogen Restaurant will be leased by another party and remain open. No information is presently available on the new lessee.

d. Reference paragraphs 4f and 4j, reference c, the information provided is clarified as follows: SP4 b6 formerly attached to the target from the 502d ASA Group, contacted the Army Chaplain at the Hohenfels Training Area (HTA) for spiritual guidance when she became depressed after developing a strong emotional attachment to another female soldier who had departed the target. b6 was counselled and subsequently reassigned to USASAFSA. b6 had nothing to do with the "satanic religious practices" referenced in paragraph 4f, reference c. That matter was not known to involve any target personnel and all personnel known to be involved with alleged "satanic religious practices" are assigned or attached to the 207th ASA Company, HTA and discussion of the incident is not germane to this report.

e. Reference paragraph 4k, reference c: SP4 b6, due to be transferred to USASAFSA is considered by his supervisors to be a potential troublemaker in the organization. He has been behaving strangely, which may be attributable to injuries he received in a 1974 motorcycle accident. b6 was reprimanded by the Company B Commander for signing a guard property receipt with the name "Mickey F--King Mouse." He has also been involved in a questionable transaction with a German national involving a motorcycle.

f. Target personnel reported no SMLM activity in the area since approximately September 1975. The PLO will recommend that the nearby German Army unit advise target personnel whenever a SMLM vehicle is reported in the area. It is known that German Military Counterintelligence (MAD) advises Fernmeldesektor F whenever a SMLM vehicle is reported in the area. The PLO will provide assistance to the LFV team in formulating a SMLM SOP. One team member had no SMLM card and none of the team members contacted on 15 January 1976 were certain of what action to take if a SMLM vehicle was sighted in the target area. None of those individuals could recall having received a meaningful SMLM briefing since arriving in USAREUR.

g. The PLO gave a short SAEDA briefing to LFV team members (less b6) on 15 January 1976 and requested their cooperation in identifying risk spots, suspicious incidents, undue curiosity and other SAEDA-related matters.

h. In October or November 1975, date unknown, an individual was sighted measuring the perimeter fence of the target from the outside. He was challenged and he rapidly retreated into the wooded area and could not be located. The incident was allegedly reported to USASAFSA and it was later concluded that the individual probably was a Bundespost (German Post Office) employee, since a Bundespost truck had been seen near the site that day, and the matter was considered settled. The incident was not reported to MI when it occurred, and only became known on 15 January 1976 during casual conversation. It was emphasized to LFV team members that available MI support can only be effective if all incidents, however minor, are reported in a timely manner. In the above instance, it was not determined how the unidentified individual was concluded to be a Post Office employee, but in any event, it appeared from information available that the activities as described were suspicious and warranted further investigation.

i. On 16 November 1975, two ranking representatives of the CSSR firm SEMEX, a subsidiary of the state-owned auto manufacturing firm SKODA visited the SEMEX offices in Furth-im-Wald concerning a planned program to import CSSR tractors into the FRG via SEMEX. Despite the fact that their business was in Furth-im-Wald and there was an abundance of hotel rooms in that town, the two individuals made reservations at the Hotel Kolmerhof in Rimbach for the night of 16-17 November. They departed for Munich (PU9135), FRG the following day. Nothing of a suspicious nature was noted during the visit, but represertatives from SEMEX have been identified in the past engaged in low-level intelligence activity on behalf of the CSSR Intelligence Service. On 25 November 1975, inquiries at the target revealed that no unit personnel regularly patronized the Kolmerhof Hotel, although it was located directly across the street from the Company B administrative area, because of its higher prices and it catered to a clientele able to spend more money than most target members. On occasion, the hotel did hold dances and some target personnel had been known to attend.

j. On 13 December 1975, SSG b6 Company B, was reported as missing after spending an evening drinking at a tavern in Voggendorf (UQ4453). Unit personnel, assisted by local police, searched the area thoroughly and he was finally found the following day after having reportedly spend the night in the quarters of a female member of the unit. The incident was reported to MI by the target in a timely manner and close coordination was maintained with unit supervisory personnel, Military Police, and the local police during the search action.

5. (C) Source Activity:

a. B58,786 advised that the behavior of b6 (paragraph 4e, above) had deteriorated, possibly due to physical problems arising from his 1974 motorcycle accident. In the accident, b6 was gored by a wire fence and his neck was heavily scarred despite several plastic surgery operations. Some spinal damage also occurred and b6 was on medication and frequently complained of headaches. He could not concentrate, argued with supervisors and had developed a short attention span. Lead questioned b6 suitability for continued assignment to sensitive duties.

b. B58,786 was encouraged to patronize the Hoberbogen Restaurant more often, in order to maintain continuity to the limited investigation, pending b6 intended move to Augsburg. Lead was to determine if b6 acted in a suspicious manner. This activity was designed to assist in the assessment of the Lead's potential. This action was not out of character as Lead patronized the restaurant occasionally and knows b6 Lead was not targetted against b6 nor was MI committed to reimburse Lead for any expenses incurred.

c. Local agency and 201 file checks on LFV team members are being submitted as a separate action. Name traces will be conducted on all team members.

6. (C) Comments:

a. No support is required from Special Operations Detachment, except for a portion of the actions outlined in paragraph 5c, above (to be submitted).

b. Reference paragraph 3b, above, if members of Company B obtain European separations, whether or not they remain in the target area, they could pose a similar situation to that which occurred in July 1974 when a former member of Company B, who had a post-separation travel restriction, travelled to CSSR within a few days after his European separation. The PLO will arrange with Commander, Company B for SAEDA briefings and appropriate warnings on travel restrictions to all target personnel receiving European separations.

c. Reference paragraph 3 1 above, local police having jurisdiction over the areas of the LFV remote towers within the 511th MI Battalion area will be contacted to determine what they have been told about the towers and what measures they are taking pertaining to tower security.

ACTION SHEET

CONTROL NUMBER

SUBJECT: Review of Internal Counterintelligence Program (ICIP) GONDOLA STAR (U)

OFFICE SYMBOL: DAMI-DOH

SUSPENSE:

DATE: 14 Jan 76

ACTION REQUIRED: To obtain ACSI decision for continuation or termination of subject ICIP.

MEMORANDUM FOR RECORD. *(Describe briefly the requirement, background and action taken or recommended. Must be sufficiently detailed to identify the action without recourse to other sources.)*

1. (U) BACKGROUND: (U)

a. During the last quarter of calendar year 1974, the ACSI directed the termination of 12 of 19 ongoing ICIP operations. The operations terminated were those which were less productive or conducted at installations of lesser sensitivity. Among those terminated was the ICIP GONDOLA STAR at Aberdeen Proving Ground/Edgewood Arsenal, MD. (A subsequent new operation increased the total ongoing ICIPs to eight.)

b. After reviewing correspondence initiated by the Commander, APG and indorsed by the Commander, Test and Evaluation Command and the Commander, Army Materiel Command, which recommended the ICIP GONDOLA STAR be continued, the ACSI reinstated the operation for a period of six months on 11 Jul 75 (TAB B).

c. In a memorandum for the Under Secretary of the Army dated 16 Sep 75, which provided the quarterly ICIP report for the second quarter calendar year 1975 (TAB C), the ACSI reinstated the operation for a period of six months and indicated a final determination would be made in January 1976 as to whether or not the operation should continue.

2. (U) (C) DISCUSSION: (U)

a. (U) At TAB A the Special Assistant to the Commander, USAINTA, provided an analysis of the ICIP GONDOLA STAR covering the period July thru December 1975. He recommended that the operation be retained as a meaningful adjunct to the security program at Aberdeen Proving Ground/Edgewood Arsenal, MD.

b. (U) (C) Three of the activities targeted by the ICIP are designated Critical Sensitive by USAINTA: Edgewood Arsenal, US Army Ballistics Laboratory and the US Army Materiel Systems Analysis Activity. During the six month period under review, two new confidential sources were recruited within these activities. Additional casual sources and CIRLS were also identified.

WARNING NOTICE: Sensitive Intelligence Sources & Methods Involved

MIIA-SO-SA (17 Dec 75)
SUBJECT: ICIP GONDOLA STAR (U)

TO HQDA (DAMI-DOH/ LTC HAENDLE) WASH DC 20310

FROM CDR, USAINTA Special Operations Detachment Ft Meade, MD 20755

DATE [redacted] Mr Hime/2401/id

CMT 2 (C)

1. (U) References:

a. ACSI DA Letter, DAMI-DOH, subject: Retention of Internal Counterintelligence Program (ICIP) (U), 11 July 1975.

b. Draft ACSI letter, DAMI-DOH, subject same as ref 1a, submitted with 902d MI Group request for reinstatement of GONDOLA STAR in June 1975.

2. (U) In compliance with paragraph 4, CMT 1, comments and recommendations concerning ICIP GONDOLA STAR are submitted herewith. Subsequent to the ACSI revalidation of ICIP Operation GONDOLA STAR (U), as provided by reference 1a above, the following actions have been taken:

a. A thorough study and review of the operation was conducted. As a result of that study, it was determined that Edgewood Arsenal (EA), the US Army Ballistics Research Laboratory (BRL), and the US Army Materiel Systems Analysis Activity (AMSAA) were Critical Sensitive (CS) activities in that order of priority; with the US Army Test and Evaluation Command (TECOM), US Army Human Engineering Laboratory (HEL) and the Materiel Testing Directorate (MTD), Aberdeen Proving Ground (APG), having a sensitivity of Highly Sensitive (HS), and so designated in that priority of support. It was the goal of the operation during the last six months to provide confidential source personnel support to the three CS target areas. With the recruitment of two additional confidential sources in AMSAA during the last six months, this short-range objective was met.

b. Additionally, ten casual sources and five counterintelligence recruitment leads have been identified. Although it is the long-range objective of the operation to provide confidential source coverage to all of the targets presently identified, it is the short-range goal to recruit additional confidential sources within the Critical Sensitive targets while concurrently spotting for additional leads during the next six months. The 902d MI Group has manpower resources, to include an experienced "Great Skills" Agent Handler, to support this operation.

c. Items of counterintelligence interest reported to the supported activities in response to established EEI by source personnel have included seven incidents of foreign contact of military and DOD civilian personnel, six incidents of foreign travel by military and DOD civilian personnel, one report of solicitation by a foreign organization, three reports of identification of alien enlistees, fourteen reports of possible unsuitability of personnel in positions with access to classified

SUBJECT: ICIP GONDOLA STAR (U)

material, and eighteen reports of possible security weaknesses, violations or hazards. The above information has provided five leads for the CE Branch, Special Operations Detachment, USAINTA; has led to the request for two limited investigations by the supported commands; has caused one DOD civilian to undergo a "fitness for duty" examination to include a psychiatric evaluation; and has caused reviews of security procedures and the issuance of security warnings by security officials at APG/EA. Details of the above reports are contained in Quarterly Progress Reports (attached as Inclosures 1 and 2).

3. (U) COL Ungerleider, CDR, APG; COL Stahl, CDR, Edgewood Arsenal, and MG Powers, CDR, US Army Test and Evaluation Command, APG, have received separate briefings on the status of ICIP Operation GONDOLA STAR. All have indicated their complete satisfaction with the support provided by the operation, and have enthusiastically indicated their desire that the operation be continued.

4. (U) The previously reported threat to APG/EA as contained in the report of the 1974 SAVE conducted at BRL and the threat to CBR information, equipment and weapons as outlined in reference 1b above remain valid.

5. (U) The operational objectives are being met. The operation is providing the information required and desired.

6. (U) Recommendation: Retain ICIP Operation GONDOLA STAR as a meaningful adjunct to the security program at Aberdeen Proving Ground/ Edgewood Arsenal, MD.

FROM DAMI-DOH

DATE 17 DEC 1975 CMT 1

LTC Haendle/mjb/56159

1. (U) Reference, message, DAMI-DOH, 032115Z Dec 75.

2. (C) Attached for your files is a copy of the INFORMATION MEMORANDUM to the Under Secretary of the Army (less inclosures) which forwarded summaries of the nine on-going CONUS ICIP operations as submitted by your headquarters. The summary pertaining to a proposed ICIP by the 66th MI Group in support of USASA was not included in this submission. Upon receipt of a response to the above referenced message, a decision will be made whether to include that operation in the next quarterly report.

3. (C) In staffing the Quarterly ICIP Report within OACSI, the Acting Director of Intelligence Operations noted that many of the summaries of on-going actions contained too many details of individual character/behavior issues. In future quarterly reports suitability-type information pertaining to individuals covered by the ICIP project should be either eliminated or summarized in general comments.

4. (C) On a separate matter, when the ACSI reinstated the ICIP CONDOLA STAR in July 1975, he indicated he would review the ICIP in six months to determine if significant information had been developed to warrant continuation of the project. It is requested that your headquarters conduct a review of this ICIP and furnish your comments and recommendations to this office by 9 January 1975.

7. (C) Quarterly Briefing of Supported Command:

a. Circumstances:

(1) On 22 August 1975 COL Kenneth L. Stahl, Commander, Edgewood Arsenal (EA), Aberdeen Proving Ground (APG), MD, was brought up to date on the status of the ICIP at EA. He was informed that GONDOLA STAR had been reviewed by the Assistant Chief of Staff for Intelligence, Department

~~CONFIDENTIAL~~ 833 [redacted]
~~CONFIDENTIAL~~

ICIP QUARTERLY PROGRESS REPORT NUMBER 4
Period: 1 July 1975 to 30 September 1975

of the Army and revalidated for another six months. At the end of the six month period, January 1976, the operation would again be reviewed. COL Stahl was reminded that MAJ Walter W. Stansberry, Former Security Officer, EA had been the ICIP Coordinator for EA and now that he had departed for reassignment a new ICIP Coordinator had to be selected and given an ICIP briefing. COL Stahl advised that he desired MAJ Stansberry's replacement, CPT Vincent J. Falconio, Security Officer, EA, be the ICIP Coordinator. COL Stahl also advised that a new deputy commander, COL Burt NMN Dall, had been assigned and he desired that COL Dall be briefed on the ICIP at EA.

(2) On 22 August 1975 CPT Vincent J. Falconio was given the initial ICIP briefing and a current status report concerning operation GONDOLA STAR (U). Falconio acknowledged his understanding of the source program and readily grasped the overall concept of ICIP. He indicated a desire to establish the best possible working relationship with the PLO. At the conclusion of the briefing Falconio executed a Security Certificate.

(3) On 17 September 1975 COL Burt NMN Dall, Deputy Commander, Edgewood Arsenal, Edgewood Area, Aberdeen Proving Ground, MD, was given the initial Internal Counterintelligence Program (ICIP) briefing. CPT Vincent J. Falconio, ICIP Coordinator, was also present during the briefing. Because COL Stahl, Commander, Edgewood Arsenal, was on annual leave, COL Dall and CPT Falconio were also given the Quarterly Progress Briefing at this time.

(4) On 24 September 1975 a Quarterly Progress Briefing was given to COL Alvin D. Ungerleider, Commander, APG, and to Mr. Harry A. Mencke, Installation Intelligence Officer, APG, the ICIP Coordinator for the Aberdeen Area, Aberdeen Proving Ground, MD.

b. Recapitulation of Operational Progress During the Period:

(1) During the first quarter of FY 1976, considerable effort was expended to reactivate and expand ICIP coverage at APG following the termination of Project GONDOLA STAR on 31 March 1975 and subsequent revalidation of the Project by the ACSI on 11 July 1975. During the latter half of July 1975, the six confidential sources which were being utilized prior to 31 March 1975 were recontacted and reactivated; one confidential source, whose recruitment had been postponed because of the termination of the project, was recruited on 5 August 1975; a Lead Development Report on an additional confidential source was submitted and approved, and this source was recruited on 4 September 1975. These two confidential sources were the first recruited in the US Army Materiel Systems Analysis Activity, a critical sensitive activity at APG.

ICIP QUARTERLY PROGRESS REPORT NUMBER 4
Period: 1 July 1975 to 30 September 1975

(2) The Project Liaison Officer (PLO) re-established liaison contacts in local, state and federal agencies in addition to maintenance of his contacts with the ICIP coordinators and security officers of those activities receiving ICIP support at APG. The PLO also established new casual sources in critical areas of the ICIP-supported activities at APG and vetted two new CIRIs to the point of submission of NAC requests. Some progress was made in improving the ratio of ICIP to non-ICIP duties of the PLO, who is also—during this reporting period—the only special agent of the Aberdeen RO; this ICIP to non-ICIP ratio has been a weak area of Project GONDOLA STAR since its reactivation in 1972. A favorable trend was established as the quarter progressed, as reflected by the fact that during July 1975 the PLO's duty hours were 45 ICIP and 172 non-ICIP, during August 1975 they were 94 ICIP and 115 non-ICIP, and during September 1975, 122 ICIP and 67 non-ICIP.

c. Significent Counterintelligence Information Developed:

(1) Under the EEI, "Identification and extent of foreign contacts of military and DoD civilian personnel, with particular emphasis on Sino-Soviet bloc countries" (paragraph 1, Appendix 1 to Annex J to OP-001-74-109), the following information was developed:

(a) Source IC-B-064 reported that an unknown number of Swedish citizens would visit the US Army Ballistic Research Laboratories (BRL), APG, on 13 August 1975. Follow-up by the PLO determined that the visit had been properly coordinated.

(b) Source IC-B-080 reported that seven Swedish citizens would visit the US Army Materiel Systems Analysis Activity (AMSAA), APG, on 26 September 1975. Follow-up by the PLO determined that the visit had not been properly coordinated, but that AMSAA had taken action to insure that the Swedish visitors would not be given access to classified information until definitive guidance was received from HQ, US Army Materiel Command.

(2) Under the EEI, "Foreign travel of military and civilian personnel, either intended or completed, to Communist controlled countries, or attendance at social and official functions at which Communist country personnel are present" (paragraph 2, Appendix 1 to Annex J to OP-001-74-109), the following information was developed:

(a) Source IC-B-010 reported that GS-12 b6 a pharmocologist employed in the Biomedical Laboratory, Edgewood Arsenal, APG, had, at HER own expense, attended the Sixth Congress of the International Union of Pharmocologists (IUPHAR) which was held in Helsinki,

Finland, 20 through 25 July 1975. During the Congress, b6 attended a luncheon hosted by a representative of the Union of Soviet Socialist Republics (USSR), who was also an official of the IUPHAR. Following the Congress, b6 took part in a five-day, IUPHAR-sponsored tour to Leningrad, USSR. Follow-up by the PLO is in progress.

(b) Source IC-B-030 reported that GS-12 b6 an employee of Human Engineering Laboratory, APG, intended to participate in a two-week tour of the Union of Soviet Socialist Republics scheduled to begin on 2 October 1975. Follow-up by the PLO determined that b6 was participating in a National Geographic Society tour and that HE had coordinated the tour with appropriate security officials.

(c) Source IC-B-032 reported that GS-12 b6 an employee of Development and Engineering Directorate, Edgewood Arsenal, APG, had visited Poland and Czechoslovakia for approximately one month in June 1975. During this visit, b6 and HIS spouse had allegedly visited relatives in Poland and Czechoslovakia. No follow-up was conducted per instructions from HQ, USAINTA.

(3) Under the EEI, "Identification of Alien Enlistees" (paragraph 6, Appendix 1 to Annex J to OP-001-74-109), the following information was developed:

(a) Source IC-B-030 reported that PFC b6, born in b6, assigned to Human Engineering Laboratory, APG, was not a citizen of the US and did not have a security clearance. Follow-up by the PLO confirmed the information and determined that the Installation Intelligence Officer (IIO), APG, was aware of b6 status.

(b) Source IC-B-030 reported that SP4 b6 born in b6 assigned to Human Engineering Laboratory, APG, was not a US citizen, did not have a security clearance, and allegedly suffered from periods of amnesia. Follow-up by the PLO confirmed the information and determined that the IIO was aware of b6 status.

(c) Source IC-B-030 reported that PFC b6, believed to have been born in b6 assigned to Human Engineering Laboratory, APG, was not a US citizen and did not have a security clearance. Follow-up by the PLO is in progress.

(4) Under the EEI, "Early detection of persons whose activities and character weaknesses render them vulnerable to hostile intelligence exploitation" (paragraph 8, Appendix 1 to Annex J to OP-001-74-109), the following information was developed:

ICIP QUARTERLY PROGRESS REPORT NUMBER 4
Period: 1 July 1975 to 30 September 1975

(a) Source IC-B-032 reported that GS-5 b6 married, a secretary in Technical Support Directorate, Edgewood Arsenal, APG, was allegedly involved in an extramarital relationship with WS-7 b6 b6 married, an employee of Technical Support Directorate. The situation is being monitored.

(b) Source IC-B-032 reported that GS-12 b6 married, employed in Development and Engineering Directorate, Edgewood Arsenal, APG, was allegedly involved in an extramarital relationship with GS-9 b6 b6 a widow, also employed in Development and Engineering Directorate. The situation is being monitored.

(c) Source IC-B-032 reported that GS-6 b6 married, a secretary in Technical Support Directorate, Edgewood Arsenal, APG, was allegedly involved in an extramarital relationship with GS-9 b6 b6 separated from his wife, employed in US Army Materiel Systems Analysis Activity, APG. The situation is being monitored.

(d) An official source of the PLO who did not want to be identified because of fear that he would lose his job, reported that LTC b6 b6 formerly assigned to US Army Materiel Systems Analysis Activity (AMSAA), now assigned to Concepts Analysis Activity (CAA), Bethesda, MD, was allegedly an alcoholic, was allegedly cohabiting with GS-8 b6 b6 an employee of AMSAA, and allegedly had had sexual intercourse with a female Captain in the Isreali Defense Forces who had been assigned as b6 interpreter when b6 was on TDY to Israel in October 1974. No follow-up action has been taken because of b6 transfer from AMSAA.

(e) Source IC-B-064 reported that GS-8 b6 an employee of AMSAA, APG, had allegedly been involved in an extramarital relationship with PL 313 federal employee, b6 Director, AMSAA, at approximately the time of the accidental death of b6 wife. The situation is being monitored.

(f) Source IC-B-079 reported that an individual, later identified as b6 a physical scientist employed in the Chemical Laboratory, Edgewood Arsenal, APG, had allegedly exhibited mental or emotional instability. Follow-up by the PLO determined that b6 had been directed to undergo a "fitness for duty" physical examination which would include a psychiatric evaluation.

(5) Under the EEI, "Security violations or hazards" (paragraph 9, Appendix 1 to Annex J to OP-001-74-109), the following information was developed:

ICIP QUARTERLY PROGRESS REPORT NUMBER 4
Period: 1 July 1975 to 30 September 1975

(a) Source IC-B-030 reported that GS-14 b6 an employee of Human Engineering Laboratory, APG, had brought HIS eight-year-old son into a controlled access area where a classified test was being conducted and remained overnight. Follow-up by the PLO determined that b6 had been counselled by HIS supervisor.

(b) Source IC-B-030 reported that carbon paper and one-time typewriter ribbon used to type classified reports in Human Engineering Laboratory, APG, had not been treated as classified waste. Follow-up by the PLO brought the situation to the attention of the security officer, HEL, who promised to take care of the situation; monitoring through IC-B-030 has not determined that any such action was taken.

(c) Source IC-B-080 reported ten(10) separate situations which constituted security violations or hazards at AMSAA. These were brought to the attention of the Security Officer, AMSAA, by the PLO.

(6) In response to the EEI, "Conduct rendering the individual vulnerable to pressure, such as homosexual, criminal, or immoral acts" (paragraph 8c, Appendix 1 to Annex J to OP-001-74-109), and "Sudden, unexplained or inadequately explained absence from work by personnel in excess of 24 hours" (paragraph 9, Appendix 2 to Annex J to OP-001-74-109), the following information was developed: The PLO was advised by an official Source at the US Army Ballistics Research Laboratories, APG, of unconfirmed rumors to the effect that b6 an employee of BRL, had been involved in trouble with the police. Follow-up by the PLO determined that seven charges ranging from possession of marijuana to grand larceny and assault and battery were on file at the Havre de Grace Police Department, Havre de Grace, MD, concerning b6 and that b6 was absent without leave.

8. (C) Actions implemented or taken by the supported command based upon the information submitted:

9(U)(C) Comments, Remarks and Recommendations: Both COL Stahl and COL Ungerleider expressed their pleasure that ICIP Project CONDOLA STAR had been reinstated by the ACSI for an additional six months. Both Commanders and their designated ICIP Coordinators continue to cooperate fully with the Project Liaison Officer and his Military Intelligence chain of command. The progress of ICIP Project GONDOLA STAR, as reflected above, is directly proportional to the amount of time the PLO's other duties permit him to devote to the ICIP.

WILLIAM B. HALL

ICIP QUARTERLY PROGRESS REPORT NUMBER 2
Period: 1 October 1975 to 31 December 1975

6. (U) Remarks: No information was reported concerning non-affiliated civilians or organizations.

7. (U) Quarterly Briefing of Supported Command:

a. Circumstances:

(1) On 1 December 1975 the initial ICIP briefing was given to MG Patrick W. Powers, Commander, US Army Test and Evaluation Command (TECOM) and COL William H. Tucker Jr., Chief of Staff, TECOM. The status of TECOM in relation to receiving ICIP support was also included in the briefing. It was pointed out that due to the limitation of resources GONDOLA STAR (U) was concentrating on three higher priority activities at APG. This was due to the three activities having a greater degree of sensitivity. Should the resource problem improve to the point where TECOM could be covered beyond routine liaison then TECOM would be immediately notified. MG Powers acknowledged his understanding of the current status of GONDOLA STAR (U).

(2) On 17 December 1975 COL Kenneth L. Stahl, Commander, Edgewood Arsenal, APG was given a Quarterly Progress Report briefing as pertains to the Edgewood Arsenal portion of Operation GONDOLA STAR (U).

(3) On 19 December 1975 COL Alvin D. Engerleider, Commander, APG was given a Quarterly Progress Report briefing as pertains to those activities located in the Aberdeen Area, APG which are supported by GONDOLA STAR (U). Mr. Harry A. Mencke Installation Intelligence Officer, APG, the ICIP Coordinator for the Aberdeen Area, APG, was also present for this briefing.

b. Recapitulation of Operational Progress During the Period: During the first quarter of FY 1976 GONDOLA STAR (U) was reactivated, two new confidential sources were recruited and efforts started to increase the ICIP coverage. In the second quarter FY 1976 efforts were made to broaden the ICIP coverage of the three priority activities designated CRITICAL SENSITIVE; Edgewood Arsenal, US Army Ballistic Research Laboratories and US Army Materiel Systems Analysis Activity. In this regard significant progress was made. Training and development of the two newly recruited confidential sources (IC-B-005 and IC-A-080) progressed and their production increased accordingly. Again during this quarter the PM had additional time available to devote to ICIP duties. This allowed the PM to more than double the time of his presence in the supported activities, as compared to previous quarters. Consequently, there was an increase in CHIS, casual sources and the activity cited in paragraph 4a(2) above.

c. Significant Counterintelligence Information Developed:

ICIP QUARTERLY PROGRESS REPORT NUMBER 2
Period: 1 October 1975 to 31 December 1975

(1) Under the EEI, "Identification and extent of foreign contacts of military and DOD Civilian personnel, with particular emphasis on Sino-Soviet bloc countries" (paragraph 1, Appendix 1 to Annex J to OP-001-74-109), the following information was developed:

(a) Source IC-E-030 reported Mr. b6 a citizen of the Federal Republic of Germany was assigned on an exchange program to work in the US Army Human Engineering Laboratory until September 1976. The ICIP Coordinator was briefed, no additional action is expected.

(b) Source IC-E-005 reported SGT b6 assigned to the US Army Materiel Systems Analysis Activity, had a former wife and two children residing in the Federal Republic of Germany. The ICIP Coordinator was briefed and local files were checked.

(c) Source IC-E-032 reported additional information concerning travel by GS-12 b6 to Czechoslovakia and Poland during the summer of 1975. Additional information was also provided concerning b6 plans for another trip to those countries. ICIP Coordinator was briefed and the information was also brought to the attention of another USAINTA element. The ICIP Coordinator expects ICIP to continue to monitor b6 activities.

(d) Source IC-E-010 reported one British and three Canadian personnel visited Edgewood Arsenal during the period 1-5 December 1975. A check with the ICIP Coordinator determined the visit had been properly cleared.

(e) Source IC-E-010 reported GS-15 b6 of Edgewood Arsenal was a medical student at the American University, Beirut, Lebanon during 1971 and raised the question of how b6 was able to avoid military service with the German Army during the war. The ICIP Coordinator was briefed. The ICIP Coordinator asked to have b6 USAIRR dossier reviewed in order to attempt to answer the question. This action is pending. b6 HQA-CH-21, has indicated that an RI was requested by AFG/ DEC.2 1975

(2) Under the EEI, "Intended foreign travel of military and DOD civilian personnel to Sino-Soviet bloc countries or attendance at social and official functions at which Sino-Soviet bloc personnel are present" (paragraph 2, Appendix 1 to Annex J to OP-001-74-109), the following information was developed:

(a) Source IC-E-030 reported GS-12 b6 an employee of the Human Engineering Laboratory, and his wife, b6 an employee of the US Army Materiel Systems Analysis Activity, took a 10 to 14 day tour to Moscow and Leningrad which was sponsored by the Smithsonian Institution in Washington, DC. Since the FLO was already aware of the b6 giving notification of the trip through their chain of command and the information having already come to the attention of another element of USAINTA, no action was taken. FLO did make mention to the ICIP Coordinator that the information had also been developed through ICIP

ICIP QUARTERLY PROGRESS REPORT NUMBER 2
Period: 1 October 1975 to 31 December 1975

(b) In a separate report source IC-B-030 reported the b6 intend to take another tour to Russia during the summer of 1976. This information was passed to the ICIP Coordinator.

(3) Under the EEI, "Solicitation by foreign nationals or organizations of personal and/or official information through official or non-official channels"(paragraph 4, Appendix 1 to Annex J to CP-001-74-109), the following information was developed:

(a) Source IC-[illegible]-030 reported the Human Engineering Laboratory received a written request for bibliographies of HEL publications from b6 b6 Institute of Experimental Psychology, Slovak Academy of Sciences, Kocelova 17, Bratislava, Czechoslovakia. The Director, HEL, sent a letter to b6 advising HEL no longer had copies of the bibliographies available for distribution to the public. The Director of HEL suggested b6 initiate contact through the Czechoslovak Embassy with the National Technical Information Services, 5285 Port Royal Road, Springfield, VA 22151. The ICIP Coordinator was briefed, no action is pending.

(4) Under the EEI, "Early detection of persons whose activities and character weaknesses render them vulnerable to hostile intelligence exploitation" (paragraph 8, Appendix 1 to Annex J to CP-001-74-109), the following information was developed:

(a) Source IC-B-005 reported MAJ b6 US Army Materiel Systems Analysis Activity, was divorced and cohabitating with GS-9 b6 b6 also divorced. b6 had also defaulted in support payments to his former wife. The ICIP Coordinator was briefed and ICIP is continuing to monitor the b6 situation.

(b) Source IC-B-032 reported information concerning a possible extra-marital relationship between GS-14 b6 and GS-3 b6 b6 both employees of Edgewood Arsenal. The ICIP Coordinator was briefed and ICIP was asked to continue to monitor the situation.

(c) Source IC-B-032 reported being told by a coworker that a "go-go dancer" at the NCO Club performed the function of sexual partner, presumably in exchange for monetary remuneration, for high-ranking visitors to Edgewood Arsenal. Local inquiry by the FIO determined the go-go dancer was no longer employed by the APG Club system. No information was developed to confirm or refute the information from source's coworker. The information was passed to the ICIP Coordinator who requested additional information as it becomes available.

(d) Source IC-B-010 reported information which could tend to indicate GS-15 b6 was mentally unstable. The ICIP Coordinator was briefed and a limited investigation was requested.
